**APPENDIX D**  
**SAMPLING RESULTS**

## ORGANIC GLOSSARY OF DATA QUALIFIERS AND ABBREVIATIONS

### Organic Data Qualifiers

- A TIC is a suspected aldol-condensation product
- B Compound was found in the blank and the sample
- C Pesticide identification was confirmed by GC/MS
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis
- E Concentration exceeds the instrument calibration range and was subsequently diluted
- I Appears on the "results spreadsheet" and "quant reports" to indicate an interference, or it appears on pesticide Form 8 to indicate an instrument blank without a surrogate
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC)
- NQ Result was qualitatively confirmed, but not quantified
- P The percent difference between the results from two GC columns is greater than 25%, the lower of the two values is reported
- SP Blank Spike, Blank Spike Duplicate, Matrix Spike or Matrix Spike Duplicate
- T Compound was found in the TCLP extraction blank and the sample
- U Compound was not detected at or above the reporting limit
- X Other specific flags may be required to properly qualify the result
- \* QC result was outside the laboratory control limits

### Abbreviations

- BS Blank Spike analysis was conducted on reagent grade water or a matrix free from the analyte(s) of interest
- BSD Blank Spike Duplicate
- BRL Below Reporting Limit
- Batch Identifies a specific extraction, digestion or preparation set (equivalent to Prep Batch)
- CD Calculation Factor used by the laboratory's Information Management System (LIMS)
- Contract Contract Laboratory Identification Code
- DF Dilution Factor
- DL Appears in the sample ID to indicate a secondary dilution
- LCS/LC Denotes Laboratory Control Standard
- LAB ID The full 12 character WESTON Laboratory Identification Number (equivalent to RFW#)
- MB Method Blank or (PB) preparation blank
- MS Matrix Spike
- MSD Matrix Spike Duplicate
- NA Not Applicable
- NR Not Required
- NS Not Spiked
- RE Appears in the sample ID to indicate a Re-analysis
- REP Replicate analysis
- Reprep Sample was reprepared and then reanalyzed
- RFW# The full 12 character WESTON Laboratory Identification Number (equivalent to LAB ID)
- RFW Lot The first 8 characters of the RFW#
- RPD Relative Percent Difference of duplicate analyses
- RRF Relative Response Factor
- RT Retention Time/Retention Time Window
- WO# Work Order No. Weston Code used to define a specific client, job phase and task

### NOTES:

- One or a combination of these data qualifiers and abbreviations may appear in the analytical report.
- Soil, sediment and sludge results are reported on a dry weight basis except when analyzed for landfill disposal or incineration parameters. All other results on a solid matrix are reported on an "as received" basis unless noted differently.
- Reporting limits are adjusted for preparation sample size, sample dilutions, and sample moisture content if analyzed on a dry weight basis.

## INORGANIC GLOSSARY OF DATA QUALIFIERS AND ABBREVIATIONS

### Inorganic Data Qualifiers

- B Result is less than the CRDL, but greater than or equal to the instrument detection limit  
E Result is estimated due to interference  
M Analyte concentrations are greater than the CRDL, and the RSD of duplicate injections was greater than 20%  
N Matrix Spike recovery was outside the control limits  
S Result was determined by the Method of Standard Additions (MSA)  
T Analyte was found in the TCLP extraction blank and sample  
U Analyte was not detected at or above the reporting limit  
W Post-digestion spike was outside 85-115% control limits, sample absorbance is less than 50% of spike absorbance  
+ MSA correlation coefficient is less than 0.995  
\* Duplicate analysis was outside the control limits

### Abbreviations

- A Analyzed by flame A.A. direct aspiration  
Batch Identifies a specific extraction, digestion or preparation set (equivalent to Prep Batch)  
BS Blank Spike analysis was conducted on reagent grade water or a matrix free from the analyte(s) of interest  
BSD Blank Spike Duplicate  
BRL Below Reporting Limit  
C Cyanide analyte flag on CLP forms  
CCV Continuing Calibration Verification  
CCB Continuing Calibration Blank  
CD Calculation Factor used by the laboratory's Information Management System (LIMS)  
CV Analyzed by the cold vapor generation method for Mercury  
Contract Contract Laboratory Identification Code  
DF Dilution Factor  
F Analyzed by graphite furnace atomic absorption spectroscopy  
ICV Initial Calibration Verification  
ICB Initial Calibration Blank  
LCS/LC Denotes Laboratory Control Standard  
LAB ID The full 12 character WESTON Laboratory Identification Number (equivalent to RFW#)  
MB Method Blank or (PB) for Preparation Blank  
MS Matrix Spike  
MSD Matrix Spike Duplicate  
NA Not Applicable  
NC Non-calculable precision due to insufficient concentration of analyte present in the sample  
NR Not Required  
NS Not Spiked  
P Analyzed by inductively coupled argon plasma  
REP Replicate analysis  
RFW# The full 12 character WESTON Laboratory Identification number (equivalent to LAB ID)  
RFW Lot The first 8 characters of the RFW#  
RPD Relative Percent Difference of duplicate analyses  
X Result obtained indirectly through calculation based on results from other analyses  
WO# Work Order No. Weston Code used to define a specific client, job phase and task

### NOTES:

- One or a combination of these data qualifiers and abbreviations may appear in the analytical report.
- Soil, sediment and sludge results are reported on a dry weight basis except when analyzed for landfill disposal or incineration parameters. All other results on a solid matrix are reported on an "as received" basis unless noted differently.
- Reporting limits are adjusted for preparation sample size, sample dilutions, and sample moisture content if analyzed on a dry weight basis.
