EXECUTIVE SUMMARY

The objective of a Preliminary Assessment (PA) is to identify areas of potential interest (AOPIs) based on whether use, storage, or disposal of potential per and polyfluoroalkyl substances (PFAS)-containing materials, including aqueous film-forming foam (AFFF), occurred in accordance with the 2018 *Army Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). A PA for PFAS-containing materials with a focus on perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), perfluorobutanoic acid (PFBA), perfluorobutane sulfonate (PFBS), perfluorononanoic acid (PFNA), perfluorohexanoic acid (PFHxA), perfluorohexane sulfonate (PFHxS), and hexafluoropropylene oxide dimer acid (HFPO-DA) and its ammonium salt (“GenX” chemicals) was completed for the Base Realignment and Closure (BRAC) property at the former Fort Monmouth, to assess potential PFAS release areas and exposure pathways. The former Fort Monmouth was composed of three operational areas: the 637-acre Main Post (MP), the 489-acre Charles Wood Area (CWA), and the 250-acre Evans Area (EA). The entire Fort Monmouth, which is in Monmouth County, New Jersey, was selected for closure under the BRAC Acts of 1993 and 2005. The completion of this PA included the execution of the following tasks:

- Conducted a kickoff meeting with the BRAC Office and the U.S. Army Corps of Engineers (USACE) on March 29, 2023, to present all parties’ preliminary knowledge of the former Fort Monmouth to provide information to guide the PA and site visit.
- Reviewed available records (e.g., aerial photography, historical maps, technical reports, previous studies, investigations) from online sources (i.e., Internet-based searches), environmental investigations and/or regulatory programs (e.g., the Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA]), and internal Army documents from the Administrative Record. In addition, an Environmental Data Resources, Inc. (EDR) Report for the former Fort Monmouth and any listed sites within and up to a 1-mile search distance was conducted.
- Conducted a 2-day site visit on May 3 and 4, 2023, to identify potential sources of PFAS and gather information for developing conceptual site models (CSMs) at AOPIs.
- Interviewed individuals with historical and present-day knowledge of operations on the BRAC property.
- Identified AOPIs and developed preliminary CSMs for pathways of potential PFAS in soil, groundwater, surface water, and sediment.

In conducting the PA of the BRAC property at the former Fort Monmouth, 12 AOPIs were identified where a potential for release of PFAS exists resulting from site operational history. AOPIs were identified at potential PFAS-release locations on both transferred property and property that is still owned by the Army.

Based on the potential PFAS releases at the AOPIs, the potential for exposure to PFAS contamination in soil exists. In addition, the potential for off-post exposure in groundwater exists, as on-post groundwater could influence downgradient drinking water sources. Given the findings of this PA, including data received from third-party testing results, the AOPIs presented warrant further evaluation, and it is the recommendation of this PA, in accordance with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) (40 Code of Federal Regulations [CFR] §300.420(b)(4)(iii)), that further action is required. Per the Army 2018 guidance, the sites identified will proceed to the Remedial Investigation (RI) phase under the NCP (40 CFR §300.430(d)). Based on third-party testing, PFAS groundwater results are above the Office of the Secretary of Defense (OSD) screening levels (SLs).

1. INTRODUCTION

The U.S. Army (Army) conducted this Preliminary Assessment (PA) to investigate the potential presence of per- and polyfluoroalkyl substances (PFAS) at the former Fort Monmouth, Monmouth County, New Jersey, in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, 42 United States Code [U.S.C.] §9601 et seq.); the Defense Environmental Restoration Program (DERP, 10 U.S.C. §2701 et seq.); the National Oil and Hazardous Substances Pollution Contingency Plan (NCP, 40 Code of Federal Regulations [CFR] Part 300); and guidance documents developed by the U.S. Environmental Protection Agency (USEPA) and the Department of the Army. The former Fort Monmouth is not on the National Priorities List (NPL), and the Army is responsible for compliance with CERCLA in accordance with Executive Order 12580, as amended.

The purpose of this PFAS PA is to identify locations that are areas of potential interest (AOPIs) on the former Fort Monmouth based on the use, storage, and/or disposal of potential PFAS-containing materials, in accordance with the *Army Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). The PA was conducted in general accordance with 40 CFR §300.420(b), the USEPA *Guidance for Performing Preliminary Assessments Under CERCLA* (USEPA 1991), and the Army *Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). This report presents findings from research conducted to assess past use of PFAS-containing materials and identify areas where these materials were stored, handled, used, or disposed of at the former Fort Monmouth.

The former Fort Monmouth was composed of three operational areas: the 637-acre Main Post (MP), the 489-acre Charles Wood Area (CWA), and the 250-acre Evans Area (EA). The entire former Fort Monmouth property was evaluated, including Army-owned property as well as property that has been previously transferred, and will be herein referred to as “Fort Monmouth.” Fort Monmouth is located in Monmouth County, New Jersey, as shown in Figure 1-1.

1.1 PFAS BACKGROUND INFORMATION

PFAS are a group of synthetic compounds that have been manufactured and used extensively worldwide since the 1950s for a variety of purposes. PFAS are stable, man-made fluorinated organic chemicals that repel oil, grease, and water. Common industrial uses of PFAS include paints, varnishes, sealants, hydraulic fluid, surfactants, and firefighting foams. PFAS include both per- and polyfluorinated compounds. Perfluorinated compounds, such as perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), perfluorobutanoic acid (PFBA), perfluorobutanesulfonic acid (PFBS), perfluorononanoic acid (PFNA), perfluorohexanoic acid (PFHxA), perfluorohexane sulfonate (PFHxS), and hexafluoropropylene oxide dimer acid (HFPO-DA or Gen X) are a subset of PFAS with completely fluorinated carbon chains, while polyfluorinated compounds have at least one carbon chain atom that is not fully fluorinated. These eight PFAS together, and for the purposes of this PA, are referred to in this report as “Target PFAS.”

Fort Monmouth was evaluated for all potential use, storage, and/or disposal of PFAS-containing materials. A variety of PFAS-containing materials are used in relation to current and historical Army operations. However, the use, storage, and/or disposal of aqueous film-forming foam (AFFF) is the most common potential source of PFAS at U.S. Department of Defense (DoD) facilities. As such, this section is organized to summarize the AFFF-related sources first followed by all of the remaining potential PFAS-containing materials. AFFF is used as a firefighting agent to suppress petroleum hydrocarbon fires and vapors. Firefighting foams like AFFF were developed in the 1960s (ITRC 2020a), but AFFF did not see widespread DoD use until the early 1970s. Older fire training facilities often were unlined and not constructed to prevent infiltration of firefighting foams and combustion products leaching into the subsurface. Large quantities of AFFF may have been released into the environment as a result of fire training exercises, fire responses, fire suppression system activations, and tank and pipeline leaks/spills.

Other potential PFAS sources considered include installation storage warehouses, some pesticide use, automobile maintenance shops, photographic processing facilities, laundry/waterproofing facilities, car washes, stormwater or sanitary sewer components, and biosolid application areas.

Many PFAS are highly soluble in water and have low volatility due to their ionic nature. The specific gravity/relative density for PFOS and PFOA is 1.8 (ITRC 2020b). Long-chain perfluorinated compounds have low vapor pressure and are expected to persist in aquatic environments. These compounds do not readily degrade by most natural processes. They are thermally, chemically, and biologically stable, and are resistant to biodegradation, atmospheric photooxidation, direct photolysis, and hydrolysis. The structure of these compounds increases their resistance to degradation; the carbon-fluorine bond is one of the strongest in nature, and the fluorine atoms shield the carbon backbone.

When PFAS are released to the environment, they can readily migrate into soil, groundwater, surface water, and sediment. Once in the environment, the compounds are persistent and may continue to migrate through airborne transport, surface water, groundwater, and/or biologic uptake. The amount of PFAS entering the environment depends on the type and amount of the PFAS material that may have been released, where and when it was used, the type of soil, and other factors. If private or public wells are located nearby, they potentially could be affected by PFAS. Similarly, surface water features may be impacted and may convey PFAS to downgradient receptors.

Of the thousands of PFAS, some are considered precursor compounds (typically polyfluoroalkyl substances). Precursor compounds can abiotically or biotically transform into PFOS and PFOA. PFOS and PFOA are referred to as terminal PFAS, meaning no further degradation products will form from them (ITRC 2020c).

1.2 PURPOSE AND OBJECTIVES

The purpose of a PA under the NCP is to 1) eliminate from further consideration those sites that pose no threat to public health or the environment; 2) determine if any potential need for removal action exists; 3) set priorities for Site Inspections (SIs); and 4) gather existing data to facilitate evaluation for the release pursuant to the Hazard Ranking System, if warranted (40 CFR §300.420(b)(1)).

The primary objective of the PA is to identify locations at Fort Monmouth where PFAS-containing materials were used, stored, or disposed of, resulting in a potential release of PFAS to the environment, and conduct an initial assessment of possible migration pathways of potential contamination. This PA also includes development of a preliminary conceptual site model (CSM) for AOPIs related to PFAS.

1.3 PFAS REGULATORY OVERVIEW AND SCREENING CRITERIA

In May 2016, USEPA issued lifetime health advisories (LHAs) for PFOA and PFOS under the Safe Drinking Water Act (SDWA). To provide Americans, including the most sensitive populations, with a margin of protection from a lifetime of exposure to PFOS and PFOA in drinking water, USEPA established a health advisory (HA) level for PFOS and PFOA (individually or combined) of 70 ng/L (USEPA 2016).

In October 2019, the Office of the Secretary of Defense (OSD) issued guidance on investigating PFOS, PFOA, and PFBS at DoD restoration sites. The OSD guidance provided risk screening levels (SLs) for PFOS, PFOA, and PFBS in groundwater, tap water, and soil, based on the USEPA regional screening level (RSL) calculator for residential and industrial reuse and using the oral reference dose of 2E-05 mg/kg-day. These SLs are used during an SI to determine if further investigation in a Remedial Investigation (RI) is warranted.

In April 2021, USEPA issued an updated toxicity assessment for PFBS. USEPA developed chronic (0.0003 mg/kg-day) and subchronic (0.001 mg/kg-day) oral reference doses (RfDs) for PFBS as part of USEPA's toxicity assessment. The RSL for PFBS was previously calculated using the RfD of 0.02 mg/kg day. New toxicity values resulted in revisions to the RSLs for PFBS in May 2021 (USEPA 2021).

In September 2021, OSD issued a revision to *Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program* (DoD 2021). The revised memorandum accounts for the updated PFBS SLs attributable to USEPA’s reassessment of PFBS toxicity in 2021. Based on USEPA research, the RSLs for PFOS and PFOA are calculated using an RfD of 2E-05 mg/kg-day. The RSL for PFBS is calculated using an RfD of 3E-04 mg/kg-day. When multiple PFAS are encountered at a site, a 0.1 factor is applied to the SL when it is based on noncarcinogenic endpoints.

In May 2022, based on continued evaluation of Target PFAS by the Agency for Toxic Substances and Disease Registry (ATSDR) and the USEPA Office of Water, USEPA provided new SLs for PFOA, PFOS, PFNA, PFHxS, and HFPO-DA.

In July 2022, OSD issued a policy memorandum adopting these new SLs to be used during the SI phase to determine whether further investigation in an RI is warranted. This revised guidance was in effect as of July 2022 and was applicable to investigating PFOS, PFOA, PFBS, PFNA, PFHxS, and HFPO-DA at DoD restoration sites, including Base Realignment and Closure (BRAC) sites (DoD 2022). In August 2023, OSD issued a memorandum to account for the May 2023 USEPA RSLs for PFBA and PFHxA in addition to the RSLs for the other six PFAS (DoD 2023). The SLs for Target PFAS are listed in Table 1-1. Currently, no legally enforceable Federal standards exist for PFAS in groundwater, surface water, soil, or sediment.

Table 1-1. Screening Levels from the 2023 OSD Memorandum

Chemical	Residential Tap Water HQ = 0.1 (ng/L or ppt)	Residential Soil HQ = 0.1 (µg/kg or ppb)
HFPO-DA (GenX)	6	23
PFBA	1,800	7,800
PFBS	600	1,900
PFHxA	990	3,200
PFHxS	39	130
PFNA	5.9	19
PFOA	6	19
PFOS	4	13

Note: The Residential Tap Water SLs are used to evaluate groundwater and surface water data. The Residential Soil SLs are used to evaluate soil and sediment data.

The Army’s strategy is to continue to assess and investigate potential releases and implement necessary response actions in accordance with CERCLA to ensure that no human health-based exposures are above the CERCLA risk-based values in drinking water. Therefore, sites where human exposure to contaminated drinking water exists will be addressed first and as quickly as possible to eliminate the exposure, and then other sites will be subsequently prioritized and sequenced to conduct the investigations and response actions necessary to characterize and, if necessary, remediate the source of PFAS contamination (U.S. Army 2018).

1.4 PA METHODOLOGY

The PA for Fort Monmouth included a site visit, aerial photographic analysis, records review, and interviews that were conducted in accordance with the methods detailed in the Programmatic PA Work Plan (Leidos 2021). The Programmatic PA Work Plan outlines the approach and methodology for conducting the PFAS PA. As detailed in the Programmatic PA Work Plan, the PA activities focused on ascertaining and documenting the following information regarding PFAS history and use, storage, or disposal at Fort Monmouth:

- On-post fire training activities
- Use of PFAS-based AFFF in fire suppression systems or other systems
- AFFF stored, used, and/or disposed of at buildings and crash sites

- Activities or use of materials that are likely to contain PFAS, such as metal plating operations
- Wastewater treatment plants (WWTPs) and landfills that may have received PFAS-containing materials
- Studies conducted to assess environmental impacts at the facility
- Potential PFAS use at parcels post transfer
- Potential off-post sources that may impact Fort Monmouth

The data gathered during PA activities are summarized in Section 3.

1.5 REPORT ORGANIZATION

The contents of this PA Report are summarized below:

- **Section 2. Site Background**—This section presents site-specific information related to operational history and discusses the environmental setting. Demographics, land use, topography, geology, hydrogeology, hydrology, groundwater, potable wells, ecological receptors, and climate are described.
- **Section 3. PA Analysis**—This section provides observations and results from the PA site visit, aerial photographic analysis, records review, and interviews.
- **Section 4. Summary of PA Data**—This section provides an overview of the data collected during the PA for the different potential PFAS sources.
- **Section 5. Summary of PA Results**—This section synthesizes all of the data gathered during the PA activities and determines whether each area evaluated during the PA is an AOPI or was not retained as an AOPI.
- **Section 6. Conclusions**—This section presents conclusions of the PA.
- **Section 7. References**—This section lists the references that were used in the preparation of this report.
- **Appendices**—Appendices A through F include data from field activities or related assessments:
 - Appendix A. Final Fort Monmouth Kickoff Meeting Minutes
 - Appendix B. Documents/Sources Reviewed During PA
 - Appendix C. Aerial Photographs
 - Appendix D. Site Visit Photographs
 - Appendix E. Questionnaire Responses and Interview Notes
 - Appendix F. Environmental Data Resources, Inc. (EDR) Report.

2. SITE BACKGROUND

2.1 SITE LOCATION

Fort Monmouth occupied approximately 1,376 acres in Monmouth County, New Jersey, approximately 45 miles south of New York City, New York, and 70 miles northwest of Philadelphia, Pennsylvania (Figure 1-1). Fort Monmouth was composed of three operational areas: the MP (637 acres) located to the east of State Highway 35 and within the Boroughs of Eatontown and Oceanport, the CWA (489 acres) located on the western side of State Highway 35 approximately 1 mile to the west of the MP and within the Boroughs of Eatontown and Tinton Falls, and the EA (250 acres) located approximately 10 miles south of the MP in Wall Township (KEMRON 2000, PPG 2015). The MP is primarily located on a peninsula between Parkers Creek and Oceanport Creek and is generally bounded by State Highway 35 to the west, Parkers Creek to the North, and the New Jersey Transit railroad line to the east. Approximately 87 acres of the easternmost portion of the MP are separated from the rest of the MP by Oceanport Avenue. The CWA is generally bounded by Pearl Harbor Road to the west, Tinton Avenue to the north, Maxwell Road to the east, and the Conrail railroad tracks to the south. The area is split nearly in half by Hope Road (PPG 2015). The EA is generally bounded by Brighton Avenue to the north; Marconi Road, Shark River Bay, Ridge Road, and Edgemere Road to the east; and Lincoln Avenue, Washington Avenue, and part of Laurel Gully Brook to the west (KEMRON 2000). Figure 2-1a depicts the MP and CWA site features, and Figure 2-1b depicts the EA site features.

2.2 SITE OPERATIONAL HISTORY

Fort Monmouth (originally known as Camp Little Silver) was established in 1917 as a training camp for Signal Corps troops prior to U.S. involvement in World War I (WWI) (Weston 1995). The land was purchased in 1919 and on August 6, 1925, the base was designated a permanent installation and officially named Fort Monmouth (CECOM LCMC 2009, PPG 2015). During World War II (WWII), Fort Monmouth expanded as the pace of training increased. The CWA was purchased by the Army in 1941 and was primarily used for research and development, testing, and housing. The EA was purchased by the Army in November 1941 for use as a radar development site (Earth Tech 1996). Primary activities conducted in the EA included research and development, maintenance, and administrative activities (Earth Tech 1994). In 1962, Fort Monmouth became the headquarters for the U.S. Army Electronics Command (ECOM) with a mission to develop electronic equipment for use in battlefields of the future. In 1978, ECOM was replaced with two new commands: the U.S. Army Communications-Electronics Materiel Readiness Command (CERCOM) and the U.S. Army Communications Research and Development Command (CORADCOM). In 1981, these commands were combined to form the U.S. Army Communications Electronics Command (CECOM) (Earth Tech 1996).

Fort Monmouth and CECOM has a long history of research and development activity, primarily related to communications and electronic equipment. In addition, Fort Monmouth has a significant history of training and housing troops (Parsons 2015). Military training activities at Fort Monmouth have varied depending on the training focus at the operational areas but generally have included the use of the various research and development (R&D) laboratories, offices, barracks, and training areas. Other military training activities conducted at Fort Monmouth included testing of radio equipment for ground troops and aviation, training and deployment of homing pigeons, development of radar, and meteorology (CECOM LCMC 2009).

Fort Monmouth activities were realigned under four BRAC Commission recommendations (1988, 1991, 1993, and 1995) prior to the recommendation for closure in 2005. The 1988 BRAC Commission directed the Army to relocate Information Systems Command from Fort Monmouth to Fort Devens, Massachusetts. The 1991 BRAC Commission directed the move of the Electronics Technology and Devices Laboratory from Fort Monmouth to Adelphi, Maryland. The 1993 BRAC Commission directed the relocation of the Chaplain School to Fort Jackson, South Carolina, and the movement of the U.S. Army Communication-Electronics

Command's Headquarters out of leased space and into space at Fort Monmouth vacated by the 513th Military Intelligence Brigade (a non-BRAC movement) and the Chaplain School. It also directed the disposal of excess facilities and real property at Evans and Charles Woods sub-posts. BRAC 1995 involved moving additional tenant personnel from Fort Dix and Bayonne to Fort Monmouth, reassigning procurement and material management personnel to Fort Monmouth, and disposing of excess housing in the Howard Commons area of Fort Monmouth (CECOM LCMC 2009, U.S. Army 2020). On September 15, 2011, Fort Monmouth was officially closed, and all active military activities ceased (PPG 2015).

The following sections provide details on the operational history at each of the three Fort Monmouth operational areas: the MP, the CWA, and the EA.

2.2.1 Main Post Operational History

The MP of Fort Monmouth was established on June 17, 1917, as Camp Little Silver with 468 leased acres (previously the site of the Monmouth Park horse racetrack). Within 3 months, Camp Little Silver was redesignated as Camp Alfred Vail. The initial mission of the Camp was to train Signal Corps operators for service in WWI. In the first 19 months of the Camp's existence, 129 semipermanent structures were built for uses including laboratories, housing, and stables. In 1918, a radio laboratory was constructed, as well as two airfields and four hangars. By 1929, the two airfields were listed as auxiliary and the main parade ground (later known as Greeley Field), was shown on aviation maps as the primary airfield. The airfield had some active operation, with two squadrons of the U.S. Army Air Service remained assigned to Camp Vail in 1918, until sometime between April and September 1938 when it was removed from aeronautical charts (Freeman 2023). Following WWI, all flying activities ceased, and in 1919, Camp Vail was designated as the site of the Signal Corps School (CECOM LCMC 2009, Weston 1995). The hangars were repurposed as laboratories and classrooms until the last one was demolished in 1983 (U.S. Army 2008). In 1925, the facility became a permanent military post and was redesignated as Fort Monmouth, with a primary mission of Signal Corps training and research. By 1930, Fort Monmouth was home to the Signal Corps Laboratories, composed of the Radio Laboratory, the Signal Corps Electrical Laboratory, the Signal Corps Meteorological Laboratory, the Signal Corps Laboratory at the Bureau of Standards, and the Subaqueous Sound Ranging Laboratory (CECOM LCMC 2009).

Construction of permanent buildings began in 1927 with the construction of four barracks, officer's quarters, and a hospital. Between 1930 and 1936, additional permanent structures, including a blacksmith shop, an incinerator, warehouses, utility shops, Squier Laboratory, a fire station, Russel Hall, various housing facilities, and a theater (CECOM LCMC 2009).

Training operations greatly increased at the onset of WWII, and Squier Laboratory was the principal laboratory on MP until 1954 when laboratory operations moved to the CWA. After laboratory operations moved to the CWA in 1954, the primary function of the MP was for administrative activities. Between 1955 and 1956, 72 WWII wooden structures were demolished to accommodate permanent structures. The new buildings were used for residential, administration, commercial, and recreational purposes. A small number of additional buildings were constructed during the 1970s and 1980s (Cabrera 2007, Weston 1995).

BRAC closures between 1988 and 1995 resulted in a net increase of activity at the MP; while the Chaplain Center and School was relocated to Fort Jackson, South Carolina and the 513th Military Intelligence Brigade was relocated to Fort Gordon. BRAC directives resulted in the consolidation of activities both on- and off-post to maximize use of the MP. In November 2005, Fort Monmouth was officially ordered to close under BRAC 2005, and by September 2011, all military activities at the MP ceased (CECOM LCMC 2009, U.S. Army 2008).

2.2.2 Charles Wood Area Operational History

The land that became the CWA was purchased by the Army in 1941 as Fort Monmouth expanded due to increased training activities during WWII. The eastern half of the property was formerly a golf course, and

the western half was residential and farmland. Camp Charles Wood was opened in July 1942 with a mission of training Signal Corpsmen until the end of WWII. It contained 60 barracks, 8 mess halls, 19 school buildings, 10 administration buildings, a recreational hall, a post exchange, an infirmary, and a chapel (CECOM LCMC 2009, Weston 1995). In addition, antenna shelters were constructed during WWII on 26.5 acres of land at Camp Charles Wood and used by the Signal Corps Laboratories for research and development purposes. This operation was placed under the command of the Army Air Force until 1951 when the operation moved to another post.

Research activities formerly conducted at Squier Laboratory and some R&D activities from the EA were transferred to the CWA in 1954 when a new laboratory, the Myer Center, was constructed. Between 1953 and 1970, a large number of residential housing units were built at the CWA, and in 1956, 90 WWII wooden structures were demolished. In 1958, Camp Charles Wood was redesignated as the CWA. The Pulse Power Laboratory was built in the early 1980s (Weston 1995).

The CWA was primarily used for R&D, testing, housing, and recreation. The R&D and testing facilities were located in the southwestern corner of the CWA. The northwestern corner formerly consisted of residential units but is currently undeveloped. Residential units occupy the southeastern boundary, and the golf course occupies the northeastern corner.

In 1993, BRAC required the Army to dispose of 264 excess housing units located on 102 acres of the northwestern portion of CWA known as the Charles Wood Housing Area, which was transferred to the Navy in 1995 but later returned to the Army (Cabrera 2007, CECOM LCMC 2009). The CWA was selected for closure under BRAC in 2005, and military activity ceased in September 2011 (PPG 2015, Shaw 2012).

2.2.3 Evans Area Operational History

In the early 1900s, the Marconi Wireless Telegraph Company of America purchased a 93-acre farm in New Jersey, as a site for receiver equipment for commercial transatlantic radio operations. On the site, the Marconi company constructed six buildings, including a 45-room hotel for unmarried employees, which eventually became the headquarters building for the EA. Following its abandonment in 1924, the Marconi complex was purchased in 1937 and designated King's College. In 1941, the Army purchased King's College and the surrounding property for use as a radar development site. In 1942, the site was redesignated Camp Evans Signal Laboratory. In 1948, the facility was redesignated as the Evans Signal Laboratory, and in 1958, it was changed to Camp Evans. When the Army Electronics Research and Development Command became the operating entity, the laboratory at Camp Evans took on the designation of Combat Surveillance and Target Acquisition Laboratory. The area was eventually designated as the EA (Earth Tech 1994, Earth Tech 1996).

The EA was primarily devoted to communications and electronics R&D activities, with approximately 50 percent of the area used for open testing of electronics equipment. The main concentration of buildings in the EA were used for electrical R&D and support activities, which included chemistry laboratories, plating facilities, radioactive materials R&D, and transformer testing. Other buildings included three administrative centers; fabrication shops, including metal and wood shops, a foundry, a machine shop, and a paint shop; general and vehicle maintenance buildings; several storage buildings; a fire station; and a former sewage treatment plant (Earth Tech 1994, Earth Tech 1996, KEMRON 2000). Most buildings at the EA were constructed prior to the end of WWII; following WWII, the only buildings constructed at the Evans Signal Laboratory included several warehouses, storage buildings, and small test structures (CECOM LCMC 2009).

R&D activities at the EA decreased after the mid-1980s. EA was recommended for closure under BRAC in 1993, and the 500 remaining employees at the EA were subsequently relocated to the MP and CWA (CECOM LCMC 2009, Seres-Arcadis 2022).

2.3 DEMOGRAPHICS, PROPERTY TRANSFER, AND LAND USE

The MP of Fort Monmouth is approximately 1 mile west of Oceanport, 3 miles southeast of Red Bank, and 1 mile northeast of Eatontown, in Monmouth County. The CWA is approximately 3 miles southwest of Oceanport, 3 miles south of Red Bank, and less than 1 mile west of Eatontown, in Monmouth County. The smaller boroughs of Little Silver and Shrewsbury are approximately 2 miles to the north of the MP and CWA. The EA is approximately 10 miles south of Oceanport, 12 miles south of Red Bank, and 9 miles south of Eatontown, in Monmouth County. Monmouth County is growing faster than the state average in New Jersey (+0.3 percent versus -0.2 percent) between April 2020 and July 2021, with a 2021 estimated population of 645,354 (U.S. Census Bureau 2023). In 2021, the U.S. Census estimated a population of 13,393 for the borough of Eatontown, with approximately 12,920 people residing in Red Bank, 6,134 in Oceanport and 6,091 in Little Silver (U.S. Census Bureau 2020). Shrewsbury borough had a population of 4,184 in 2020 (U.S. Census Bureau 2020).

As part of the BRAC closure process for the MP and CWA, the Fort Monmouth Economic Revitalization Authority (FMERA) was established to redevelop the two areas for commercial use. The Army and FMERA executed economic development conveyance agreements for two phases of parcel transfers. The Phase I Agreement was signed on June 25, 2012 (U.S. Army 2012). All but one of the Phase I carveout parcels were transferred to FMERA between 2012 and 2019. The Phase II agreement was signed on October 25, 2016 (U.S. Army 2016). Two of the Phase II parcels were transferred to the First Atlantic Credit Union, and the remaining parcels were transferred to FMERA. Two groups of Phase II carveout parcels have not yet been transferred. Since the initial property conveyance to FMERA, numerous parcels have been transferred to other owners (FMERA 2023a, FMERA 2023b). The initial property conveyance for the MP and CWA are shown in Figures 2-2a and 2-2b, respectively.

Between July 2003, and December 2010, approximately 250 acres of the EA property were conveyed to the Township of Wall, Brookdale Community College, New Jersey Department of Transportation, and Jersey Central Power and Light. Figure 2-2c shows the initial property transfers at the EA.

The land use surrounding Fort Monmouth is a combination of public, residential, industrial, commercial, and agricultural land. The CWA is primarily surrounded by public and residential lands, with commercial areas, infrastructure, industrial use, vacant land, and agricultural land accounting for the remaining land uses. The predominant land use immediately adjacent to the MP is residential (USACE 2009). The EA is surrounded by a mix of residential and commercial development of varying densities. The Shark River borders the EA on the northeastern boundary (CH2MHill 1997, FWEC 2001). The current and future land use for all three operational areas of Fort Monmouth is commercial and industrial. Deed restrictions associated with much of the BRAC property prohibit the access and use of the groundwater underlying these parcels (Figures 2-2a through 2-2c). Deed restrictions were also put in place at the EA for Parcel A, Block 240 and Parcel E, with Block 240 to be used and maintained exclusively for public park or public recreation purposes. Parcel F at the EA also has a deed restriction that states the property shall be used and maintained for roadway/highway.

2.4 TOPOGRAPHY

The topography at the MP and CWA is characterized by level land areas. Elevations range from 5 to 34 feet above mean sea level (amsl) at the MP and 26 to 60 feet amsl at the CWA. Topographic gradient slopes from west to east in both areas. Historical excavation and filling activities have altered the natural topography (Shaw 2007). The highest elevations at the MP are at Landfill M-8, with the lowest elevations to the east, along Parkers and Oceanport Creeks (PPG 2015, Weston 1995). The southwestern corner of the CWA is gently rolling and has the greatest relief, while the eastern boundary of the property along Wampum Brook has the lowest elevations (PPG 2015).

The EA ranges from approximately 80 feet amsl in the southern portion of the site to 2 feet amsl near the Shark River. The central portion of the EA is relatively flat with an average elevation ranging from 70 to

80 feet amsl. A relatively steep grade is present behind the residential properties toward the Shark River along the northeastern boundary of the EA. Laurel Gully Brook divides the EA. The brook is incised into unconsolidated sediments, forming a steep ravine approximately 4 to 10 feet wide (Seres-Arcadis 2022).

2.5 GEOLOGY

All three operational areas of Fort Monmouth lie within the Outer Coastal Plain subprovince of the New Jersey section of the Atlantic Coastal Plain physiographic province, which generally consists of a seaward-dipping wedge of unconsolidated sediments, including interbedded clay, silt, sand, and gravel. To the northwest is the boundary between the Outer and Inner Coastal Plains, marked by a line of hills extending southwest from the Atlantic Highlands overlooking Sandy Hook Bay to a point southeast of Freehold, New Jersey, and then across the state to the Delaware Bay. These formations of clay, silt, sand, and gravel were deposited on Precambrian and lower Paleozoic rocks and typically strike northeast-southwest, with a dip that ranges from 10 to 60 feet per mile. Coastal Plain sediments date from the Cretaceous through the Quaternary Periods and are predominantly derived from deltaic, shallow marine, and continental shelf environments (Cabrera 2007).

The formations record several major transgressive/regressive cycles. Regressive upward coarsening deposits, such as Englishtown and Kirkwood Formations and the Cohansey Sand, are usually aquifers, while transgressive deposits, such as the Merchantville, Marshalltown, and Navesink Formations, act as confining units. The thicknesses of these units vary greatly, ranging from several feet to several hundred feet, and thicken to the southeast (Cabrera 2007).

The eastern half of the MP is underlain by the sands of the Red Bank Formation, ranging in thickness from 20 to 30 feet, while the western half is underlain by the Homerstown Formation sand, ranging in thickness from 20 to 30 feet. The predominant formation underlying the CWA is also the Homerstown, with small areas of Vincentown Formation sands intruding in the southwestern corner. Sand and gravel deposited in recent geologic times lie above these formations. Interbedded sequences of clay serve as semi-confining units for groundwater (Cabrera 2007). The EA consists of thin surficial deposits underlain by the Kirkwood Formation, which is present from ground surface to 103 feet below ground surface (bgs). The Kirkwood Formation consists of quartz sand interbedded with and overlying dark gray to brown clay silt. The quartz sand is typically massive, micaceous, and burrowed (Earth Tech 1996).

Udorthents-Urban land is the primary classification of soils on Fort Monmouth, which have been modified by excavating or filling. Soils at the MP include Freehold sandy loam, Downer sandy loam, and Kresson loam. Freehold and Downer are somewhat well drained, while Kresson is a poorly drained soil. The CWA has sandy loams of the Freehold, Shrewsbury, and Holmdel types. Shrewsbury is a hydric soil; Kresson and Holmdel are hydric due to inclusions of Shrewsbury. Downer is not generally hydric but can be hydric (Cabrera 2007). The three dominant soil units at EA are the Evesboro Sand, Evesboro Sand-Urban Land Complex, and Freehold Sandy Loam-Urban Land Complex. The Evesboro soil is rapidly permeable in the subsoil and substratum; however, the water capacity in the unit is reportedly low (Earth Tech 1996). Freehold Sandy Loam-Urban Complex is also found in the southern area of the EA (CH2MHill 1997). The Evesboro soil is rapidly permeable in the subsoil and substratum; however, the water capacity in the unit is reportedly low and surface runoff is rapid, resulting in soil erosion (Earth Tech 1996, CH2MHill 1997). The Evesboro Sand-Urban Complex is similar to the Evesboro Sand; however, it has areas covered with impermeable surfaces. The Evesboro Sandy Loam-Urban Complex is a well-drained soil. The Freehold soil as described above is somewhat well drained and has a high-water capacity (CH2MHill 1997).

2.6 HYDROGEOLOGY

All three discontinuous operational areas of Fort Monmouth lie within the Atlantic and Eastern Gulf Coastal Plain groundwater region and are underlain by undeformed, unconsolidated to semi-consolidated sedimentary deposits. The chemistry of the water near the surface is variable with generally low dissolved

solids and high iron concentration. In areas underlain by glauconitic sediments, the water chemistry is dominated by calcium, magnesium, and iron (e.g., Red Bank and Tinton sands). The sediments in the vicinity of Fort Monmouth were deposited in fluvial-deltaic to nearshore environments (Cabrera 2007).

The water table is generally shallow at the MP and fluctuates with the tidal influence of Parkers and Oceanport Creeks. The depth to groundwater at MP is between 5 and 12 feet bgs. The water table aquifer in the MP area is identified as part of the “composite confining units,” or minor aquifers. The Hornerstown Formation acts as an upper boundary of the Red Bank aquifer, but it might yield sufficient water within its outcrop to supply individual households. The Red Bank Formation outcrops along the northern edges of the MP and CWA and contains two members: an upper sand member and a lower clayey sand member. The upper sand member functions as the aquifer and is probably present on some of the surface of the MP and at a shallow depth below the CWA. The Red Bank Formation supplied many domestic wells with water at one time. The Hornerstown and Red Bank Formations overlay the larger Wenonah-Mount Laurel aquifer (Cabrera 2007). Groundwater at the MP and CWA typically flows east toward the Atlantic Ocean. However previous investigations indicate that local topography tends to deflect the groundwater flow from higher elevations toward local creeks and tributaries (Shaw 2008, Parsons 2015).

The EA has two sources of groundwater: the shallow Kirkwood-Cohansey aquifer and two deep aquifers known as the Wenonah-Mount Laurel and Englishtown aquifers. The Wenonah-Mount Laurel and Englishtown aquifers are approximately 425 and 560 feet below grade, respectively. In the Kirkwood-Cohansey aquifer, groundwater is primarily encountered at approximately 20 to 30 feet bgs and at shallower depths closer to the Shark River. Localized areas of perched water occur in the thin silty-clay lenses of the vadose zone. Groundwater flow in these areas tends to move laterally above the silty-clay zones before recharging the regional water table (Seres-Arcadis 2022). Data from the monitoring wells installed in the EA indicated that the shallow aquifer is influenced by tidal exchange from the Shark River. Groundwater at the EA generally flows northeast, toward the Shark River, and is influenced by Laurel Gully Brook in the northern portion of the operational area (Earth Tech 1996, FWEC 2001).

2.7 SURFACE WATER HYDROLOGY

All three operational areas of Fort Monmouth are in the Atlantic Coast Drainage Basin. The MP is in the Shrewsbury River Watershed, with the northern half located within the Parkers Creek sub-watershed. The MP is drained by several waterways that flow generally from west to east. Mill Creek enters the MP along the southwestern boundary and flows partially through the post before turning north and meeting Lafetra Creek. Lafetra Creek originates off-post and forms the northern boundary of the MP along with Parkers Creek. Parkers Creek originates at the confluence of Lafetra Creek and Mill Creek and flows along the northern boundary of the MP until it discharges into the Shrewsbury River, directly to the east of the MP. Parkers Creek is a shallow tidal estuary having an average depth of 3 feet at mean tide (Shaw 2007).

Husky Brook, a freshwater stream originating off-post, drains the southern half of the MP, which lies within the Husky Brook sub-watershed. A portion of the brook has been dredged, widened, and dammed to form Husky Brook Lake, which is used for recreational purposes. Downstream from the lake, Husky Brook is piped underground for several hundred feet before it surfaces and eventually runs into Oceanport Creek. Oceanport Creek, to the east of the Oceanport Avenue bridge, was previously periodically dredged by a New Jersey Department of Environmental Protection (NJDEP) permitted contractor in order to maintain a marina for Fort Monmouth personnel. Oceanport Creek is a tidally influenced and flows along the southern boundary of the MP before emptying into the Shrewsbury River. The Shrewsbury River is a tidal estuary that empties into Sandy Hook Bay and is separated from the Atlantic Ocean by a narrow barrier beach ending at Sandy Hook. The Atlantic Ocean is within 3 miles of the MP (Shaw 2007).

The southern portion of the CWA is drained by two streams that unite at a point near the eastern boundary. Its southernmost branch originates south of the CWA, the other stream originates within a lowland wooded area in the vicinity of CWA Sewage Treatment Plant (STP, CW-5/FTMM-27). The two streams become

the main stem of Wampum Brook, which flows through Eatontown and forms a small freshwater pond called Wampum Lake. Wampum Lake gives rise to Mill Creek, which flows in the MP. The northern tributary to Wampum Brook originates near the CWA western boundary and flows northeast where it eventually unites with Wampum Brook (Shaw 2007).

An extensive stormwater drainage system was constructed at Fort Monmouth in the 1940s, to supplement natural drainage and prevent localized flooding. The stormwater drainage system discharges at various points into Wampum Brook, Husky Brook, Husky Brook Lake, Lafetra Creek, Mill Creek, Parkers Creek, and Oceanport Creek. Some of the stormwater drainage system outfalls on the MP are below the elevation of the mean high tide, particularly along Oceanport Creek and Parkers Creek. During high tides, water backs up into the stormwater drainage system. The extreme southeastern portion of the MP is subject to flooding during high tides combined with heavy rains (Shaw 2007).

The primary surface water drainage features at the EA consist of the Laurel Gully Brook and the Shark River. The depth of the surface water in the brook ranges from 2 to 12 inches, with a width of approximately 4 to 10 feet. Laurel Gully Brook is incised into the groundwater table aquifer referred to as the Kirkwood-Cohansey aquifer. The bottom of the substrate is composed of the unconsolidated sand and gravel, which comprises the aquifer. Stormwater drainage from most of the EA flows through a subsurface stormwater drainage system, which discharges to Laurel Gully Brook. Laurel Gully Brook flows from upland areas southwest of the EA toward the northeast, where it discharges into the tidal marsh area of the Shark River. Along the eastern boundary of the facility, stormwater flows directly toward the Shark River (Earth Tech 1998, Seres-Arcadis 2022). The Shark River opens into the Atlantic Ocean approximately 1.75 miles to the east of the EA (Earth Tech 1998).

2.8 WATER USAGE

Potable water at the MP and CWA is supplied by the New Jersey American Water Company, which comes from upper Potomac-Raritan-Magothy aquifer, Swimming River Reservoir, Shark River, middle Potomac-Raritan-Magothy aquifer, Jumping Brook, Glendola Reservoir (New Jersey Water Supply Authority Manasquan System), and Glendola Reservoir (Shark River) (NJAWC 2022, Shaw 2007). A review of NJDEP data for the 2009 Environmental Assessment Report, indicated that there were no public community water supply wells or community wellhead protection areas located at the MP and CWA properties (USACE 2009). One non-community well is located south of the CWA (NJ-GeoWeb 2023). A non-community water supply well is a public water supply well that is used by individuals other than year-round residents for at least 60 days of the year. Five irrigation wells were historically maintained on-post to service the CWA golf course (Shaw 2007). The location and current use of these wells was unknown at the time of the PA.

The Wall Township Imperial Park Plant supplies approximately 7,700 houses and the EA with potable water. The Imperial Park Plant receives the water from the Manasquan Reservoir and eight wells that are in the deep confined Wenonah-Mount Laurel and Englishtown aquifers. Two of the municipal supply drinking water wells used by Wall Township for the Imperial Park Plant are located adjacent to the EA. A third municipal supply well is in Building 9082, which is located on BRAC property along the eastern boundary of the EA near Evans Road (NJ-GeoWeb 2023), as shown in Figure 2-1b. Wall Township groundwater supply is supplemented with surface water from the Manasquan River Reservoir, which is located approximately 5 miles south of EA (Earth Tech 1998, Seres-Arcadis 2022).

Figure 2-3a depicts potable wells within a 1-mile radius of the MP and CWA, and potable wells within a 1-mile radius of EA are shown in Figure 2-3b. A desktop well search was performed using the NJDEP Dataminer (<https://njems.nj.gov/DataMiner>) Water Supply and Geoscience's online radial well search tool. The online tool allows the query of well records in either a quarter, half, or 1-mile radials based off a single point. The query adds 1,350 feet to the selected radius to account for the atlas grid location method previously used by NJDEP and well drillers. Therefore, to accomplish a 1-mile well search from the facility

boundary, which is a non-contiguous area of 1,376 square miles, a series of 1-mile radial well searches was performed, resulting in 43,766 records. This data set was then refined to 4,358 records by including only potentially potable wells, abandoned wells, and duplicate records. The wells search resulted in 292 domestic water wells within 1 mile of the MP and CWA and 833 domestic water wells within 1 mile of the EA (NJDEP DataMiner 2023). According to the EDR report (EDR 2023) and the state GIS database, wells with 1 mile of the three Fort Monmouth operational areas are a mixture of agricultural, irrigation, livestock, industrial, and public/private water wells.

2.9 ECOLOGICAL PROFILE

Fort Monmouth was located on approximately 1,376 acres in three discontinuous operational areas (MP, CWA, and EA). The MP was located primarily on a peninsula between Parkers Creek and Oceanport Creek. The CWA was located approximately 1 mile west of the MP. The EA was located on the Shark River approximately 10 miles south of the MP. The MP and CWA are predominantly urban with pockets of forests and wetlands predominantly along the creeks (PPG 2015). The EA is surrounded by urban and residential areas but contains more forested areas, parks, open spaces including ballfields, and a community college campus.

Although most upland areas of the MP and CWA are developed, patches of upland forest are present in several areas. Significant forested areas are most prominent on the southern portion of the CWA, consisting of secondary hardwood growth with a closed canopy and moderate to dense undergrowth. Dominant tree species include red oak (*Quercus rubra*), chestnut oak (*Quercus prinus*), birch (*Betula* sp.), tuliptree (*Liriodendron tulipifera*), and sweetgum (*Liquidambar styraciflua*). Understory species include sassafras (*Sassafras albidum*), flowering dogwood (*Cornus florida*), and black cherry (*Prunus serotina*) (PPG 2015). Old field habitats include formerly mowed areas where the vegetation includes grasses and forbes and often immature trees. Old field habitat at the MP includes grasses; many forbes, including Queen Ann's lace (*Daucus carota*), pokeweed (*Phytolacca americana*), goldenrod (*Solidago* sp.), and milkweed (*Asclepias syriaca*); and sparse saplings of tree species, including eastern red cedar (*Juniperus virginiana*) and winged sumac (*Rhus copallinum*) (PPG 2015). Larger forested areas are present at EA in the northwest, north, and east along with pockets of forested areas along the community college and ballparks.

Data from Monmouth County identifies 65 acres of wetlands within the MP and approximately 100 acres of wetlands within the CWA (EDAW, Inc. 2007). NWI mapping identified wetlands along Oceanport Creek and Parkers Creek in the MP area of Fort Monmouth as estuarine and marine wetlands. Most of these wetlands are dominated by common reed (PPG 2015). Areas along Mill Creek, Husky Brook, Husky Brook Lake, Wampum Brook, Lafetra Creek, and Shrewsbury Creek in the MP and CWA were identified as freshwater emergent or forested/shrub wetlands. The most extensive of these are forested wetlands (NWI 2023). Forested wetlands in the area are typically dominated by red maple (*Acer rubrum*) and other hardwoods, including sweetgum (*Liquidambar styraciflua*) and black gum (*Nyssa sylvatica*). Herbaceous species found in these forested wetlands typically include smartweed (*Polygonum* sp.), jewelweed (*Impatiens capensis*), violets (*Viola* sp.), asters, sedges, and ferns (PPG 2015). NWI mapping identified 2.3 acres of freshwater forested/shrub wetland along the Laurel Gully Brook in the southern edge of the northern forested area. In addition, an approximately 15.5-acre emergent estuarine wetland complex is adjacent to the eastern boundary of EA and the Shark River.

Fauna found within or nearby the MP or CWA of Fort Monmouth are common species that are tolerant of human activity and developed areas. Mammal species observed at Fort Monmouth include eastern cottontail rabbit (*Sylvilagus floridanus*), woodchuck (*Marmota monax*), muskrat (*Ondatra zibethicus*), gray squirrel (*Sciurus carolinensis*), skunk (*Mephitis mephitis*), raccoon (*Procyon lotor*), chipmunk (*Tamias striatus*), red fox (*Vulpes vulpes*), and white-tailed deer (*Odocoileus virginianus*) (USACE 2009). Birds commonly observed include American crow (*Corvus brachyrhynchos*), robin (*Turdus migratorius*), European starling (*Sturnus vulgaris*), brown-headed cowbird (*Molothrus ater*), mourning dove (*Zenaidura macroura*), blue jay (*Cyanocitta cristata*), chickadee (*Poecile atricapillus*), tufted titmouse (*Baeolophus bicolor*), mallard (*Anas*

platyrhynchos), and Canada goose (*Branta canadensis*) (USACE 2009). Amphibians common to the Fort Monmouth area include red back salamander (*Plethodon cinereus*), spring peeper (*Pseudacris crucifer*), wood frog (*Lithobates sylvaticus*), bullfrog (*Lithobates catesbeianus*), and green frog (*Rana clamitans*). Common reptiles likely to occur at Fort Monmouth include the common snapping turtle (*Chelydra serpentina*), northern brown snake (*Storeria dekayi*), northern water snake (*Nerodia sipedon*), and eastern garter snake (*Thamnophis sirtalis*) (USACE 2009). These species are also likely to occur at the EA.

The U.S. Fish and Wildlife Service (USFWS) Environmental Conservation Online System (ECOS) Information for Planning and Consultation (IPaC) tool identified two federally listed or proposed threatened and endangered (T&E) species potentially occurring on or near all three discontinuous areas (MP, CWA, and EA) of Fort Monmouth (USFWS 2023). The listed species consist of the federally endangered northern long eared bat (*Myotis septentrionalis*) and the proposed endangered tricolored bat (*Perimyotis subflavus*). IPaC also identifies a candidate species, the monarch butterfly (*Danaus plexippus*), as potentially occurring at Fort Monmouth (USFWS 2023). The federally threatened bog turtle (*Glyptemys muhlenberhii*) and swamp pink (*Helonias bullata*) are potentially occurring on or near EA. No federally listed flora or fauna are known to occur at Fort Monmouth; however, the T&E species surveys are dated (Malcolm Pirnie 2006). Although no specific documentation of the presence of these species was available for Fort Monmouth, habitat is present at all three areas of Fort Monmouth for summer roosting of the bats or laying eggs on host plants for the monarchs. In addition, habitat is present for the bog turtle and swamp pink at the EA.

Twenty-four migratory birds of particular concern are identified by the IPaC tool as potentially occurring on Fort Monmouth. These birds include species such as the American oystercatcher (*Haematopus palliatus*), bobolink (*Dolichonyx oryzivorus*), Cerulean warbler (*Dendroica cerulea*), Lesser yellowlegs (*Tringa flavipes*), purple sandpiper (*Calidris maritima*), and short billed dowitcher (*Limnodromus griseus*) (USFWS 2023).

2.10 CLIMATE

The closest major city to Fort Monmouth is Tinton Falls, New Jersey, where the summers are warm, humid, and wet while the winters are very cold, snowy, and windy. Humidity in this area is common, with the highest chance of a muggy day being in July (Weather Spark 2023). The warm season lasts from June to September, with the highest temperatures occurring in July at a monthly average temperature of 82.8°F (Table 2-1). The humidity levels are variable year-round. The coldest period in Tinton Falls occurs in January, with an average temperature of 32.9°F (Climate Data 2021).

The rainy period of the year lasts from late March through late August and the most rainfall typically occurs in April, with an average of 3.7 inches of rain (Weather Spark 2023). Snowfall typically occurs from late November to late March and averages a monthly high of 5.0 inches in January. The windier part of the year, mid-October to late April, lasts approximately 6.5 months with the average wind speed being more than 9.8 miles per hour. The highest wind speeds occur in January, with an average hourly wind speed of 12.0 miles per hour (Weather Spark 2023).

Table 2-1. High, Mean, and Low Temperatures for Tinton Falls, New Jersey

Average	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual
Max Temp (°F)	39.7	42.3	49.1	59.9	68.7	77.5	82.8	81.2	75	64.5	54.1	45	61.7

3. PA ANALYSIS

The primary components of the PA are records reviews, analysis of aerial photographs, a site visit, and interviews. The following sections summarize the methods used and activities conducted for the Fort Monmouth PA. The reference to “on-post” refers to property that has been or still is owned by the Army. Any references to “off-post” refers to areas that have never been owned by the Army.

3.1 RECORDS REVIEW

Prior to the records review, site visit, and interviews, a kickoff meeting was held between the BRAC Environmental Program, U.S. Army Corps of Engineers (USACE), and PA team on March 29, 2023. The purpose of the kickoff meeting was to present all parties’ preliminary knowledge of Fort Monmouth and to provide information to guide the PFAS PA and site visit. The final kickoff meeting minutes are presented in Appendix A.

Preliminary research was conducted prior to the site visit to if any of the following activities were conducted, which may indicate whether there was use, storage, or disposal of PFAS-containing materials during operations at Fort Monmouth:

- On-post fire training
- Use of PFAS-based AFFF in fire suppression systems or other systems
- AFFF used, stored, or disposed of at buildings and emergency response sites
- Activities or materials used that are likely to include PFAS-containing materials
- Studies conducted to assess the environmental impacts of PFAS-containing materials
- Review of potential off-post sources.

The records review included a combination of Internet-based searches and reviews of aerial photography, historical maps, technical reports, previous studies, and investigations available online. In addition, an EDR report was generated for Fort Monmouth (EDR 2023). An EDR report includes search results from a variety of environmental, state, city, and other publicly available databases for up to 2 miles surrounding a referenced property.

As part of the records review, a search was conducted of the NJDEP DataMiner database website (<https://njems.nj.gov/DataMiner>), which provides digital copies of cleanup action reports, regulatory activities, environmental data, and other documents (NJDEP DataMiner 2023). The records review also evaluated available environmental investigations conducted under CERCLA and the Resource Conservation and Recovery Act (RCRA). Additional documents discovered in the Administrative Record managed by the Army (<https://fortmonmouthrecords.com/>) were also reviewed, which included electronic copies of installation maps and drawings, inspection reports, well completion reports, and regulatory correspondence. Table 3-1 lists the documents reviewed that are relevant to the evaluation of AOPIs in this PA. A complete list of documents reviewed is included in Appendix B.

Table 3-1. Summary of Relevant Records Reviewed

Document Title	Author	Date	Relevance
<i>Aerial Photographic Site Analysis, Evans Area, Charles Wood Area, Fort Monmouth, New Jersey</i>	ERI	December 1993	Information for AOPIs, background information for the CWA and EA
<i>Final Enhanced Preliminary Assessment Report, A Portion of the Charles Wood Area and the Entire Evans Area, Fort Monmouth, New Jersey</i>	Earth Tech	January 1994	Information for AOPIs, background information

<i>Technical Memorandum Phase II Environmental Site Assessment – PFAS Investigation</i>	Langan	November 2022	Information for AOPIs, prior PFAS investigations
<i>Final Five-Year Review Report Fourth Five-Year Review Report, Evans Area, Fort Monmouth Oceanport, Monmouth County, New Jersey</i>	Seres-Arcadis	December 2022	Information for AOPIs, human and environmental risk for the EA
<i>Land Status Fort Monmouth Main Post Monmouth County, NJ Map</i>	FMERA	May 18, 2023	Land parcels, land status for the MP
<i>Land Status Fort Monmouth Charles Woods Monmouth County, NJ Map</i>	FMERA	May 18, 2023	Land parcels, land status for the CWA

Information gathered during the records reviews helped identify data gaps and enabled elimination of several areas based on their historical use. Data gaps associated with facility operations; PFAS-containing material use, storage, or disposal; and current exposure receptors at Fort Monmouth contributed to a conservative approach for identifying AOPs. However, areas with little potential to result in a PFAS release, such as residential buildings, hospitals, cafeterias, and recreational areas, were eliminated from further evaluation early in the PA process.

Areas identified to have potentially used, stored, or disposed of, or had recorded the potential for a release of PFAS-containing materials, including AFFF, were further evaluated.

3.2 AERIAL PHOTOGRAPHIC ANALYSIS

Fourteen historical aerial photographs from the CWA and 14 historical aerial photographs from the EA spanning from 1931 to 2019 from the EDR report (EDR 2023) were reviewed. The EDR report for the MP and CWA targeted the most developed portion of the two operational areas to provide the most relevant coverage for the database search. This resulted in inadequate coverage for the MP in the EDR report. To supplement, the PA included review of 20 aerial photographs from the MP spanning from 1931 to 2019 on historicaerials.com. In addition, the aerial photographs from 1947 and 1963 for the CWA and EA in the *Aerial Photographic Site Analysis* (ERI 1993) were reviewed. Aerial photographs from historicaerials.com were also reviewed for refinement of the aerial photographic analysis for both the CWA and EA (from 1947, 1979, 2002, and 2012). The EDR aerial photographs are included in Appendix C; aerial photographs reviewed from historicaerials.com and the site analysis are not included in the appendix. The aerial photographs were analyzed to identify potential activities or developments that may suggest the potential use, storage, or disposal of PFAS-containing materials, including AFFF (e.g., evidence of fire training activities, such as fire pits or burn scars). Analysis of the historical aerial photographs did not identify evidence of fire training activities at Fort Monmouth. If an operational area is not mentioned during a year, no significant changes were observed or an aerial photograph may have not been available for that year. The aerial photographic analysis is summarized as follows:

- **1931** – Much of the western portion of the MP is wooded. The central portion of the MP has been cleared and the faint outline of what appears to be an earthen runway is present on what is now known as Greely Field. Hangars are located along the eastern side of the MP; no planes are visible on the runway or near the hangars. Clusters of buildings are present to the north, south, and east of what is now known as Greely Field. Most of the area to the east of Oceanport Avenue appears to be open field. At the CWA, a golf course is present on the northeastern side, agricultural fields are present on the northwestern side, and a wooded area is present on the southern portion. The EA is predominantly agricultural with little development. A farmhouse is visible on the north-central area of the EA. A fenced area is present in the northeastern area along Marconi Road with a building. The Building 9007 Metal Plating Facility is visible in the northeastern area of the EA just outside a fenced area.
- **1940** – The MP has a small amount of development of buildings on the eastern side of the operational area, including the Building 282 Fire Station. Additional large buildings that were not visible on the 1931 photograph but are present in the 1940 photograph include the Squier Laboratory northwest of Greely Field and Russell Hall east of Greely Field. The airfield is still present with no planes visible at the MP in the aerial photograph. No significant changes occurred for the CWA or EA.
- **1947** – Significant development of the MP since the 1940 aerial photograph was evident on the 1947 aerial photograph, particularly the eastern and western portions of the operations area. The MP northern shoreline east of Oceanport Avenue expanded farther into Parkers Creek with the construction of several buildings in the area. The airfield that was previously visible in the 1940 photograph is no longer visible in the 1947 photograph of the MP. The MP Sanitary Treatment

Plant is visible along with multiple housing units on the northwestern portion of the MP. Significant development has also occurred at both the CWA and EA since the 1940 photographs. Construction now visible in the 1947 aerial photograph includes housing units on the southern side of the golf course, Buildings 2543 and 2525 west of the CWA STP, and barracks in the northeastern portion of the CWA. At the EA, buildings have been constructed in the northeastern and central portions of the operational area. The Building 9031 Fire Station is visible along with the EA STP.

- **1951** – Additional buildings are present within the northern and central portion of the EA, and new roadways are visible to the south in a region that was previously used for equipment testing. Buildings visible in the central portion of the EA in the 1951 aerial photograph include Buildings 9011, 9037, and 9097, which were electroplating facilities.
- **1953** – Several smaller buildings present in the 1951 aerial photograph of the CWA have been demolished and are no longer present along the western boundary of CWA in the 1953 aerial photograph. The western portion of the newly constructed Building 2700 Myer Center Facility is now visible in that area and the surrounding ground appears disturbed. The roads in the northern and southern portions of the EA are more visible in the 1953 aerial photograph than the 1951 photograph. Not much additional construction is visible at the EA since the 1951 aerial photograph; however, additional areas of disturbance are visible. Surface Dump 1 is visible in the north-central portion of the CWA.
- **1957** – The MP has significant building development on the northeastern portion of the operational area. The helipad at Greenly field is visible. Construction of the Building 699 Gasoline Service Station appears to have been completed.
- **1961** – Buildings in the northern portion of the EA have been demolished and are no longer visible on the 1961 aerial photograph. The former storage yards located in the southern portion of the EA are visible.
- **1963** – The central portion of the MP has undergone significant development. At the CWA, construction of Building 2700 and associated parking lots are complete. Approximately 12 barracks located in the northeastern portion of the CWA have been demolished. The housing in the northwestern portion of the CWA has been removed and replaced by new structures. Additional structures are now present in the previously forested southeastern corner of the CWA.
- **1969 and 1970** – At the CWA, a fence was constructed around the CWA STP, and a new building is present on the eastern side of the CWA STP. The roads in the southern portion of the EA are not as visible and some of the buildings have been demolished.
- **1974** – Helipad 2 is now visible at the CWA on the eastern side of Building 2525.
- **1979** – In the northern portion of the EA, a clearing is now present in the vicinity of the historical location of the Farmhouse Dump. No evidence of activity or disturbances at Surface Dump 1 is visible.
- **1985** – Numerous buildings located on the western and northeastern portions of the MP have been demolished, including the MP Sanitary Treatment Plant. The CWA STP is no longer present, and construction is ongoing in the southwestern portion of the CWA.
- **1995** – New buildings have been developed in the northeastern portion of the MP. The buildings in the southwestern portion of the CWA are complete and a new building is present where the former CWA STP was located.
- **2002** – Across the street from the Building 283 Plating Shop, a parking lot and multiple buildings have been constructed on the MP. At the CWA, both the Building 2536 Fire Station and the Building 2542 AFFF Storage are not present on the 2002 aerial photograph. The Building 2560

Fire Station is now visible in the 2002 aerial photograph of the CWA. In the southwestern corner of the CWA, the Building 2629 Fire Training Facility and Building 2628 Storage Area are visible along with five concrete simulation pads. The cleared area in the northern portion of the EA is revegetating, and baseball fields are present in the southern portion of EA along with more wooded areas. The EA STP and Building 9007 Metal Plating have been demolished.

- **2006** – The predominant changes in the CWA between the 2002 and 2006 aerial photograph is the demolition and removal of buildings. All of the buildings in the northwestern corner of the CWA have been removed, and the area is predominantly trees and shrubs. Brookdale Community College was constructed in the southwestern portion of the EA.
- **2010 and 2012** – No significant changes.
- **2013** – The Commvault building is under construction on the northwestern side of the CWA.
- **2015 and 2017** – Construction of the Commvault building complex and parking in the northwestern/central portion of the CWA is complete. The building, parking lot, and landscaping encompass approximately 4 acres. No significant changes were observed in the MP or EA.
- **2019** – Building 2700 on the western side of the CWA has been demolished, and the trees on the northwestern side have been removed. Helipad 2 is no longer present at the CWA. Approximately 9 acres of property that included the former helipad and the surrounding area were disturbed in the 2019 aerial photograph.

3.3 PA SITE VISIT

Prior to the site visit, the PA team corresponded with Army and FMERA personnel to coordinate dates and access to the facility and identify potential interviewees. The Fort Monmouth PA site visit was conducted on May 3 and 4, 2023. The site visit included a site walk and visual inspection of all readily accessible areas at Fort Monmouth to identify potential sources of PFAS and gather information for developing CSMs at AOPIs. In addition, the Monmouth County Historical Society was visited in search of information related regarding historical fires and fire logbooks; however, no relevant documents were identified. Interviews were conducted with former Fort Monmouth Fire Department personnel regarding historical fires and historical fire response procedures. Appendix D contains photographs from the PA site visit.

3.4 SUMMARY OF INTERVIEWS

A PFAS PA questionnaire for gathering information related to PFAS usage at Fort Monmouth from key personnel was developed and distributed prior to the site visit. The Senior Environmental Officer for FMERA and the former BRAC Environmental Coordinator (BEC) for the EA responded to the questionnaire; the questionnaire responses are presented in Appendix E. The primary goal of the questionnaires was to identify whether PFAS-containing materials, including AFFF, were used on-post in the past or are currently being used.

In addition, telephone and in-person interviews were conducted with the Senior Environmental Officer for FMERA, the former BEC for the EA, a former firefighter with the Fort Monmouth Fire Department, and a former Battalion Chief with the Fort Monmouth Fire Department prior to and during the site visit. Former fire personnel indicated that AFFF was stored on-post in the past at the fire stations (Buildings 282, 2536, 2560, and 9031) and storage areas (Buildings 2542, 2628, and outside 2629). AFFF was also used to clean tanks and other apparatus on fire trucks. FEMERA and former Army personnel indicated that a fuel spill occurred in the parking lot east of Building 699 and AFFF was used to clean the spill. Table 3-2 summarizes the interviews conducted and the pertinent information provided, and interview notes are included in Appendix E.

Table 3-2. Interviews Conducted for PA

Title (Years of Experience at Facility)	Date	Information Provided
Firefighter, Fort Monmouth Fire Department (1994 to 2010)	Telephone interview on April 24, 2023	<p>The firefighter had approximately 16 years of experience at Fort Monmouth and provided the following information:</p> <ul style="list-style-type: none"> • AFFF was stored within the fire stations. • Pails of foam were stored in the Building 2628 Storage Area at the Building 2629 Fire Training Facility at the CWA. • No recollection of ever practicing with foam while he was stationed at Fort Monmouth. • The foam trailer was refilled from the 5-gallon pails of AFFF. Most of the refilling was conducted at the MP in front of the Building 282 Fire Station. Recalled an incident where pump failure on the foam trailer led to a spill of approximately 5 gallons of foam; did not recall the location of the spill. • Foam was generally used to flush pumps and for cleaning tanks and other apparatus on fire trucks; foam may have gotten on the ground, but he could not recall where these activities were conducted.
Environmental Program Manager, BEC (1992 to 2015)	<p>Telephone interview on April 24, 2023</p> <p>PFAS Questionnaire received on May 17, 2023</p>	<p>The Environmental Program Manager, BEC had approximately 23 years of experience in various roles at Fort Monmouth, including Laboratory Manager/Director, and provided the following information:</p> <ul style="list-style-type: none"> • AFFF was generally stored at the Building 2628 Storage Area at the CWA and the fire stations and vehicle storage areas at all three Fort Monmouth operational areas. AFFF was stored as both a concentrate and as a mixed solution on firefighting equipment. • AFFF was stored outside on the foam trailer at the Building 282 Fire Station at the MP. • AFFF was stored on-post in 5-gallon totes. The mobile foam trailer stored 5-gallon totes of AFFF. The mobile trailers were used during firefighting operations to apply AFFF. • Vehicle washing facilities were provided by gas stations with detailing. However, these facilities did not wash or detail fire trucks.
Senior Environmental Officer, FMERA (1998 to Present)	<p>Email correspondence received on May 2, 2023</p> <p>PFAS Questionnaire received on May 3, 2023</p>	<p>The Senior Environmental Officer had approximately 35 years of experience, including as the former Chief for the Environmental Division at Fort Monmouth, and provided the following information:</p> <ul style="list-style-type: none"> • The Building 2536 Fire Station at the CWA was destroyed by fire; it was replaced by the Building 2560 Fire Station in 2001. An adjacent garage (Building 2542) was used to store 5-gallon pails of AFFF at the CWA. Building 2542 was demolished by the Army, and the Building 2628 Storage Area became the new storage facility at the CWA. • AFFF was stored at the Building 2629 Fire Training Facility located at the CWA.

Table 3-2. Interviews Conducted for PA (Continued)

Title (Years of Experience at Facility)	Date	Information Provided
		<ul style="list-style-type: none"> • At the MP, AFFF was stored at the Building 282 Fire Station. • At the CWA, AFFF was stored at the Building 2560 Fire Station and Building 2542 AFFF Storage. • The Fire Department stored 5-gallon containers of AFFF on trailers, which could be towed by emergency vehicles. • In the 1990s, a gasoline fuel spill occurred in the east parking lot of Building 699 on the MP and AFFF was used to contain the spill.
Battalion Chief, Fort Monmouth Fire Department (1978/1979 to 2011)	Telephone interview on April 25, 2023	<p>The Battalion Chief had approximately 32 years of experience as a firefighter at Fort Monmouth and provided the following information:</p> <ul style="list-style-type: none"> • AFFF was stored on fire trucks and within all fire stations, except the original Building 2536 Fire Station at the CWA. He has knowledge of fire training on-post in front of all fire stations. • AFFF was stored in Building 2542, which was located on the northern side of the Building 2536 Fire Station at the CWA. AFFF was also stored in the Building 2628 Storage Area, near the Building 2629 Fire Training Facility located at the CWA. • There was a foam trailer that was refilled wherever foam was stored on-post. • Foam was not used to fight the fires at the CWA Building 2536 Fire Station and the MP Building 293 Battery Test Facility. • He does not recall calibrating the AFFF trucks/equipment on-post; stated they had meters and did not need to be calibrated. • AFFF was not used inside the Building 2629 Fire Training Facility at the CWA. Training with foam was conducted outside at the Spill/Burn Simulation Pads on props such as helicopters, cars, and trucks.

4. SUMMARY OF PA DATA

4.1 PREVIOUS PFAS INVESTIGATIONS

In 2012, USEPA published the Third Unregulated Contaminant Monitoring Rule (UCMR3), which required nationwide public water systems (i.e., waterworks) to sample for a list of 30 unregulated contaminants, including 6 chemicals of concern relevant to this PA (i.e., PFOS, PFOA, PFBS, PFNA, perfluoroheptanoic acid [PFHpA], and PFHxS). The water supplier to the CWA and MP, New Jersey American Water Company (NJAWC), participated in the UCMR3 evaluation by sampling the six PFAS. The source of the CWA and MP's water is generally the Neptune Water Treatment Plant, although it may at times receive water from the Swimming River Treatment Plant (Walski and Draus 1995). The UCMR3 sampling event included the collection of samples in 2015 from the Jumping Brook and Swimming River Water Treatment Plants. PFAS were not detected in any 2015 samples (USEPA 2022). The water supplier to the EA, the Wall Township Water Department, participated in the UCMR3 evaluation by sampling the six PFAS in 2014 and 2015. The source of the EA's water is generally the Imperial Park Plant. The UCMR3 sampling event included the collection of samples in 2014 and 2015 from the Imperial Park Treatment Plant. PFAS were not detected in any 2014 or 2015 samples (USEPA 2022).

USEPA published the Fifth Unregulated Contaminant Monitoring Rule (UCMR5) in 2021, which expanded the list to 29 PFAS for additional sampling between 2023 and 2025. The UCMR5 sampling includes more sensitive analytical limits for PFAS detection. As part of the UCMR5 sampling, NJAWC will be sampling the Jumping Brook and Swimming River Water Treatment Plants and the Wall Township Water Department will be sampling the Imperial Park Plant in 2023 to 2025 (USEPA 2023).

New Jersey established maximum contaminant levels (MCLs) for PFOA and PFOS in 2021 and has required all public water systems to be monitored for these PFAS. The highest detected concentrations of PFOA and PFOS in NJAWC water samples collected in 2022 (7.6 and 3.8 parts per trillion [ppt]), 2021 (9.9 and 3.0 ppt), and 2020 (11.8 and 4.4 ppt) were below the New Jersey MCLs (NJAWC 2020, NJAWC 2021, NJAWC 2022). The highest detected concentrations of PFOA and PFOS in Wall Township water samples collected in 2021 (4.3 and 3.1 ppt) were below the New Jersey MCLs (WTWD 2022).

In May 2022, a Phase I Environmental Site Assessment (ESA)/PA Report/Phase II ESA was completed for the Tinton Falls Commercial Development Parcel. The site is located on the southwestern side of the CWA and consists of 31.25 acres (Langan 2022a). The site was formerly owned and operated by the Army and used for training, storage, R&D, and as a fire training facility. The site buildings were removed from service in approximately 2011. The Phase I ESA/PA documented a history of AFFF storage along with fire training activities. The Phase II ESA was conducted in December 2021 and consisted of soil and groundwater sampling to determine PFAS detections within the firefighting operations area. PFAS were detected in the soil samples at concentrations below the October 2022 NJDEP interim residential and non-residential soil remediation standards. In July 2022, groundwater sampling results indicated PFOS, PFOA, and PFHxS exceeded the OSD SLs, and PFOS and PFOA exceeded the NJDEP groundwater quality standards (GWQS). Overall, 14 of the 25 PFAS were detected in groundwater (Langan 2022b).

A PFAS investigation has not been conducted at the MP, the remaining portions of the CWA, or the EA prior to this PA.

4.2 EVALUATED SITES

During the PA records reviews, interviews, aerial photographic analysis, and site reconnaissance, the PA team investigated available documentation and physical evidence for areas having a potential historical PFAS release. The sites evaluated include fire stations, fire training areas (FTAs), landfills, plating operations, WWTPs, pesticide facilities, vehicle maintenance shops, car washes, sites that use engine

lubricants, paint shops, and photographic processing facilities, as shown in Figures 4-1a, 4-1b, and 4-1c and described in the following sections.

4.2.1 AFFF Use, Storage, and Disposal

The PA included a search for evidence of current or historical AFFF use, storage, or disposal at Fort Monmouth. Documentation specifying the use of AFFF at Fort Monmouth during Army ownership and operation was not identified during the records reviews and aerial photographic analysis. However, historical AFFF storage and use were identified through data collected from personnel interviews. AFFF is not currently known to be used or stored at Fort Monmouth. The areas identified as potential areas of historical AFFF usage and/or storage at Fort Monmouth are discussed below by each operational area.

Main Post

Building 282 is located on the MP, at the northwestern edge of Baker Circle southeast of Greenly Field and operated as a fire station from 1935 until before 2011. Historically, the Fort Monmouth Fire Department maintained one ladder truck with a 100-foot ladder, two 1,000-gallon pumper trucks, two 2,000-gallon squad trucks, one rescue truck, and three cars used by fire chiefs and inspectors between the MP (Building 282) and CWA (Building 2536) fire stations (DoD 1995). According to personnel interviews, AFFF was stored on fire trucks and in 5-gallon pails within the Building 282 Fire Station. AFFF was also stored on a mobile foam trailer that was kept outside at the Building 282 Fire Station. The foam trailer was refilled from the 5-gallon pails of AFFF. Most of the refilling activities were conducted outside Building 282 but may have been conducted any place that AFFF was stored on-post. According to the former Battalion Chief, fire training with AFFF was conducted in front of the Building 282 Fire Station. Floor drains were present within Building 282 and a sump was located in the basement, both of which were reportedly shown to be connected to the sanitary sewer system on plans from 1933 (Shaw 2007). While operational, these drains released to the Former MP Sanitary Treatment Plant (FTMM-20) until 1941, the MP Sanitary Treatment Plant (FTMM-19/AOC-3) until 1975, and then the Northeast Monmouth County Regional Sewerage Authority (NEMCRSA) system thereafter.

The Building 293 Battery Test Facility has reportedly been used as a battery testing facility since 1952. The building was used for environmental conditions testing of various types of batteries. Operations at Building 293 included the mixing of electrolytes and charging/discharging of batteries by using sulfuric and potassium hydroxide. In the mid-1980s, a fire occurred at Building 293 that destroyed the building, and the building was reconstructed in 1984 (Shaw 2007). Although the fire department that responded to the fire is unknown, the Battalion Chief of the Fort Monmouth Fire Department at the time of the fire indicated foam was not used to fight the fire (Table 3-2).

Building 699 is located on the southern side of Saltzman Avenue in the central portion of the MP and operated as a gasoline service station for the Army and Air Force Exchange Services (AAFES) Organization. According to a personnel interview, fuel (gasoline) was released by a tanker truck refilling an underground storage tank (UST) at the Building 699 Gasoline Service Station during the 1990s. The fuel at the Building 699 Parking Lot Fuel Spill flowed from the UST pad area and into the parking lot east of Building 699. AFFF was reportedly used by the fire department to contain the gasoline spill, and the residue was flushed into the storm drain.

Based on aerial photographs, three airfields and a row of four hangars were constructed at the MP of Fort Monmouth in 1918. The Primary Airfield consisted of an unpaved runway measuring 3,000 feet southwest/northeast, while the two smaller airfields east of Oceanport Avenue were referred to as "Auxiliary Fields." In 1918, more than 90 test flights were made per week. The September 1938 New York Sectional Chart no longer depicted on the Primary Airfield indicating the airfield was closed at some point in 1938. Aerial photographs support that the airfields located on the MP were not actively used past the 1940s. Aerial imagery show that the two auxiliary fields had been replaced with ballfields by 1940, and the

unpaved runway in the Primary Airfield was no longer visible by 1947. The four hangars southwest of the southeast Auxiliary Field are visible in the 1931 aerial photograph (EDR 2023). The former hangars were repurposed as laboratories and classrooms after the aviation mission left Fort Monmouth until the last of the hangars were razed. A 1957 aerial photograph indicated the row of hangars had been removed, erasing the last trace of aviation infrastructure at Fort Monmouth (Freeman 2023). The airfields and aircraft hangars at Fort Monmouth predate the use of AFFF, which were developed in the 1960s (ITRC 2020a). Helipad 1 was a 0.87-acre asphalt paved area on the MP and used from approximately 1944 until official closure of the MP in early 2019. Helipad operations included rotary wing landings and takeoffs. The first appearance of the helipad is on a 1944 aerial photograph (Shaw 2007). No structures associated with Helipad 1 were visible in aerial photographs. In addition, no permanent nozzles, crash carts, or evidence of an emergency management or fire suppression system associated with Helipad 1 were visible in a 2006 site photograph (Malcolm Pirnie 2006). No information suggesting historical AFFF storage or the occurrence of emergency response actions involving AFFF was identified for Helipad 1 in the documents reviewed for the PA.

Charles Wood Area

Two historical fire stations (Buildings 2536 and 2560) were identified during the PA. The Building 2536 Fire Station was constructed along Laboratory Road and operated as the original fire station from before 1947 until the building was destroyed by fire during the late 1990s. During his interview (summarized in Table 3-2), the Battalion Chief noted AFFF was not used in response to the Building 2536 Fire Station fire. The Building 2536 Fire Station was not rebuilt and was replaced by the Building 2560 Fire Station in 2001. Historically, the Fort Monmouth Fire Department maintained one ladder truck with a 100-foot ladder, two 1,000-gallon pumper trucks, two 2,000-gallon squad trucks, one rescue truck, and three cars used by fire chiefs and inspectors between the CWA (Building 2536) and MP (Building 282) fire stations (DoD 1995). According to personal interviews, AFFF was stored on the fire trucks within Building 2536 and was also used in front of the building for fire training activities. Building 2542 was located north of Building 2536 and operated as a garage and fire department storage area from the late 1980s until approximately 2007. According to personnel interviews, AFFF was historically stored within Building 2542.

The Building 2560 Fire Station is located south of Corregidor Road at the CWA and operated as a fire station from 2001 until approximately 2011 when the CWA officially closed. Building 2560 replaced the original fire station for CWA, which burned down during the late 1990s. According to personnel interviews, AFFF was stored on fire trucks and in 5-gallon pails within the Building 2560 Fire Station. The former Battalion Chief also indicated that fire training activities with AFFF were conducted in front of the fire station. A modern oil/water separator (OWS) existed at Building 2560. It is unknown if the OWS is still present (Shaw 2007). While in use, the OWS discharged via metal piping to a riprap-lined outlet outside Building 2560 (Cabrera 2007). The building is currently vacant.

The Building 2629 Fire Training Facility is located in the southwestern portion of the CWA, which was zoned for supply/storage and research development and testing while CWA was in use (Shaw 2007). Known as the training tower, Building 2629 was constructed in 1998 and used as a fire training facility (Langan 2022a). According to a personnel interview with an Environmental Coordinator, the building was used for fire training activities fueled by propane gas. AFFF training was not conducted inside Building 2629; however, AFFF may have been used for fire training activities conducted outside the building (Langan 2022a). The Building 2628 Storage Area is located in the southwestern area of the CWA. The building is a one-story warehouse that was constructed in 1990 and used as a storage and receiving area by the Army's firefighting division. AFFF was among the equipment that was stored in Building 2628 (Langan 2022a). Buildings 2628 and 2629 were taken out of service in approximately 2011 (Langan 2022b). Five Spill/Burn Simulation Pads were also in the vicinity of Buildings 2628 and 2629. Two concrete pads located south of Buildings 2628 and 2629 were used for spill training simulations, and the three concrete

pads located northeast of Buildings 2628 and 2629 were used for fire training simulations. The area and buildings are currently vacant.

Helipad 2 and a Possible Airfield were also present at CWA from 1960 until early 2019. Helipad 2 was a 0.25-acre asphalt paved area that was used for rotary wing landing and takeoff (Shaw 2007). Aerial photographs of the site indicate no structures were associated with Helipad 2. No permanent nozzles, crash carts, or evidence of an emergency management or fire suppression system associated with Helipad 2 were visible in a 2006 site photograph (Malcolm Pirnie 2006). No information about historical AFFF storage or the occurrence of emergency response actions involving AFFF was identified for Helipad 2 in the documents reviewed for the PA. The possible airfield on the CWA was identified on a map in the 2009 Final Environmental Assessment at Fort Monmouth. The map depicts the airfield to be in the same location as the helipad, but no other documentation was found on this possible airfield. Aerial photographs show no evidence of a possible airfield on the CWA.

Evans Area

The Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area were identified at EA during the PA. The Building 9031 Fire Station, located on Monmouth Boulevard, was constructed in 1942/1943 (InfoAge 2000) and operated as a fire station until the closure of the EA in 1993. Fire trucks from the Building 9031 Fire Station were fueled and maintained at the MP, and small quantities of hazardous material were stored in a flammable storage cage within the building (Earth Tech 1994). According to interviews with former Fort Monmouth firefighters, AFFF was stored on fire trucks within the Building 9301 Fire Station. The former Battalion Chief also indicated that fire training with AFFF was conducted in front of the fire station. The Building 9031 Fire Station is currently undergoing preservation by the Southern Monmouth County Fire Museum Association and is being used for vehicle and equipment storage.

The Building 9634 Firefighting/Spill Response Storage Area was located west of the Building 9301 Fire Station (InfoAge 2000). Use of the building for firefighting and spill response storage was documented in 1993 (Earth Tech 1994). However, details about what materials were stored within the building were unknown at the time of the PA.

4.2.2 Metal Plating Operations

Main Post

The Building 283 Plating Shop was located in Bay 122 of the building and operated as a plating shop from 1934 until 1954. Electroplating materials consisted of silver, copper, zinc cyanide, sodium cyanide, copper sulfate, nickel sulfate, chromic oxide, and cadmium oxide (Shaw 2007). Further details are limited regarding the specific processes that were used for metal plating and surface treatment at the Building 283 Plating Shop. In 1954, metal plating operations were moved to Building 2700 Myer Center Facility at the CWA. It is unknown if Building 283 was connected to the MP Sanitary Treatment Plant. Even though metal plating operations were conducted at this building, the time frame is prior to the common use of PFAS-containing materials in plating operations.

Charles Wood Area

Metal Plating at Building 2532 in the Former Watson Laboratory Complex was conducted in the mid-1940s until 1951, until the laboratory was moved to Rome, New York (Shaw 2008). Building 2532 was associated with gold and other metal plating activities. In addition, other facility operations included cleaning of crystals, quartz etching, and soldering. These operations involved chemicals such as carbon tetrachloride, ammonium bifluoride, cadmium sulfate, and sulfuric acid (Shaw 2007, Shaw 2008).

The Building 2700 Myer Center Facility was built in 1954 west of Laboratory Road and has an extensive history of laboratory operations before its demolition in 2018. The Building 2700 Myer Center Facility operated as a R&D facility from 1954 until approximately 2011. The facility housed a wide variety of shops and laboratories, including metal plating and photographic processing operations. Other activities at the facility included electrochemical research, growing and shaping of crystals, various plating operations, mixing of magnetic powders, machining, welding, spray painting, use of solvents for equipment cleaning, and other miscellaneous laboratory operations using standard laboratory chemicals. The metal plating operations involved lead nitrate, copper, nickel, and gold plating solutions (Shaw 2007). Photo-processing activities also was conducted within the building (Shaw 2007). The operations at the Building 2700 Myers Center Facility produced large amounts of wastewater. Prior to discharging to the CWA STP, the wastewater was treated by two pits that contained limestone for neutralizing liquid waste. Wastewater samples from Building 2700 collected by the U.S. Army Environmental Hygiene Agency (USAEHA) from 1974 to 1975 included high concentrations of hexavalent chromium consistent with rinse water from chrome plating operations, sulfuric acid consistent with a dip solution used to activate a metal surface for plating, and copper pickling waste.

The Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23) were built concurrently, and construction was completed in 1952. CW-1 was located in the central area of Building 2700 and was approximately 2,960 ft² (0.07 acres). CW-2 was located on the eastern side of Building 2700 and was approximately 1,751 ft² (0.04 acres) (Weston 1995). The neutralization pits were concrete vaults that measured 7 by 13 feet, were 8 feet high, and contained limestone chips. The pits were designed to treat corrosive wastes generated from laboratory activities operating within the facility (Shaw 2007). The CW-1 (FTMM-22) wastewater treatment lime pit was located in the courtyard area of Building 2700 and treated corrosive waste generated in the north and west wings of the building. The CW-2 (FTMM-23) wastewater treatment lime pit was located on the eastern side of Building 2700 and treated corrosive waste generated in the south and east wings of the building (Shaw 2007). The pits were cleaned out in 1992, inspected, and the limestone chips were replaced. The sludge, stones, and rinse water were drummed and disposed of as hazardous waste (Weston 1995). During the inspection, it was noted the CW-2 pit received sewage from the guard shack and a bathroom near the east entrance. The plumbing was rerouted for those facilities and connected directly to the sanitary sewer (Weston 1995). Eventually, at an unknown date, CWA changed hazardous waste management practices to prohibit the discharge of corrosive wastes into the wastewater treatment lime pit (Shaw 2007, Weston 1995). Both wastewater treatment lime pits were demolished in 2002, and a new sewer pipe was installed to maintain the existing connection to the CWA sanitary sewer (Shaw 2007). According to personnel interviews, the bottom structure of the CW-2 lime pit was left in place. Based on aerial imagery, the Building 2700 Myer Center Facility was deconstructed prior to 2019.

Evans Area

Metal plating operations at the EA were conducted in Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities. Building 9007 was constructed in 1917 as a gymnasium and later operated as a metal plating shop from approximately 1950 until 1976. Interviews with former employees have indicated that the Building 9007 Metal Plating Facility was a messy operation where spills were common, and metal plating waste may have been disposed of outside the door on the southwestern side of the building (EEI 1997). Stressed vegetation along the northwestern side of the building was observed during a 1994 site inspection that may have been indicative of another area where solvents, acids, or other wastes associated with the building operations were discharged (Earth Tech 1994). Plating wastes (e.g., halogenated and aromatic solvents, acids, cyanides, and metals) from sinks and drains may have discharged to a leach field southwest of Buildings 9004 and 9005 (EA-2/AREE 2) until approximately 1970 when Building 9007 was connected to the EA STP. Liquid wastes may have also discharged to a leach field located southwest of the intersection of Monmouth Boulevard and Marconi Road (EA-23/AREE 23A; Earth Tech 1998). Building 9007 was connected to the EA STP in approximately 1970,

and a lime neutralization pit was constructed southwest of the building to neutralize metal plating waste before they were discharged to the sanitary sewer (Earth Tech 1994). The neutralization pit was located approximately 45 feet southeast of an area of stressed vegetation along the northwestern wall of the building (EEI 1997). Building 9007 was abandoned in the late 1980s and subsequently demolished in 1999 (KEMRON 2001).

Buildings 9011, 9037, and 9097 (EA-6) were constructed in the early 1940s to support research and development of radar and other electrical equipment (Earth Tech 1994). According to the *Fourth Five-Year Review Report for the EA* (Seres-Arcadis 2022), Buildings 9011, 9037, and 9097 may have been used for electroplating activities between the 1950s and the early 1970s. The Five-Year Review references the preliminary assessment as the source of this information; however, according to the *Enhanced Preliminary Assessment Report* (Earth Tech 1994): “It is believed that electroplating was performed in Building 9097 between Buildings 9011 and 9037 during the 1950s, 1960s, and early 1970s.” This suggests that Buildings 9011 and 9037 may have been included solely as a location reference and that electroplating operations may have only been conducted in Building 9097. Buildings 9011, 9037, and 9097 were reportedly connected to the EA STP shortly after the facility’s construction, which would have received any waste from plating operations that were conducted within these buildings (Earth Tech 1994). The location of waste discharge prior to connecting to the EA STP was unknown at the time of the PA.

Stormwater runoff from the portion of EA that included Buildings 9007, 9011, 9037, and 9097 historically discharged to six stormwater outfalls (Earth Tech 1994). Five of these outfalls discharged to Laurel Gully Brook and one of the outfalls discharged to the Shark River (Earth Tech 1996). These outfalls were suspected of carrying metal plating waste, laboratory waste, sewage, radioactive waste, and waste oil associated with the research and development activities at the EA (Earth Tech 1994).

Buildings 9011, 9023, and 9097 are currently being used by the InfoAge Museum.

4.2.3 Wastewater Treatment Plants

Main Post

The Former MP Sanitary Treatment Plant (FTMM-20) was located on Parkers Creek in an area north of Allen Avenue in approximately the same location as former Building 259. The date of construction is unknown, but based on aerial photographs, the building was present before 1931 until approximately 1941. The Sanitary Treatment Plant presumably operated until the second Sanitary Treatment Plant (FTMM-19) came online in 1941 (Shaw 2007). The Former Sanitary Treatment Plant operation dates pre-date PFAS and is not considered an area of concern.

The MP Sanitary Treatment Plant (FTMM-19/AOC-3) was located on Parkers Creek north of Sherrill Avenue, between Building 292 to the east and Building 697 to the west. The MP Sanitary Treatment Plant was built in 1941 with a capacity of 700,000 gallons of sewage per day and consisted of a bar screen and grit chamber, comminutor, primary and secondary settling tanks, a mixing and aeration tank, and a baffled contact chlorination tank. Sludge was treated in a three-stage anaerobic digester and discharged to underdrained sand beds for drying. Dried sludge was then used throughout the post as a fill and soil conditioner (e.g., transported to the CWA golf course and landfills after treatment) (Weston 1995). Treated wastewater effluent was discharged to Parker’s Creek (Shaw 2007). The MP Sanitary Treatment Plant was closed on September 3, 1975, when the MP sewer system was connected to the NEMCRSA system (Shaw 2007). Sludges and liquids in the building were removed and the building disinfected in 1981. The physical facility was demolished in 1983 (Weston 1995).

Charles Wood Area

The CWA STP (CW-5/FTMM-27) was located in the central portion of the CWA, bounded by Hope Road to the east, Corregidor Road to the north, Guam Lane to the west, and Laboratory Road to the south. The

CWA STP was built in 1942 to handle 800,000 gallons of sewage per day. The CWA STP treated waste streams from the CWA, including wastewater from metal plating operations in Building 2700. The primary treatment consisted of a grit chamber, screening, comminutor, and primary settling. The secondary treatment consisted of a constantly and uniformly dosed biofilter, followed by secondary clarification and chlorination. Sludge was treated in one of the two anaerobic digesters, dewatered, and concentrated. It was then drawn off onto under drained open sand beds for drying. Supernatant liquid from each digester and drainage from the drying beds were routed back the plant influent (Shaw 2007). The chlorinated effluent was discharged to a tributary of Wampum Brook on the eastern side of Hope Road. Sludge was transported to the CWA golf course and to landfills. The CWA STP was shut down on October 29, 1975, when the CWA sewer system was connected to the NEMCRSA system. In 1981, all sludges and supernatant liquids were removed from the CWA STP, and the facility was cleaned and disinfected. Mercury used in the distributor seal on the biofilter was removed and disposed of by the Directorate of Logistics. The physical facility was demolished in 1983 (Shaw 2007).

Three separate leach fields were depicted on a plan showing Building 2525. The main sanitary sewer line from the building is shown to discharge to a septic tank and leach field east of the building (Shaw 2007). It is unknown how long or when these leach fields were used.

The Building 2700 Myer Center Facility was a significant source of wastewater to the CWA STP. The building comprised nearly 10 percent of the 0.4 million gallons per day of influent to the CWA STP. Building 2700 contained a relatively wide variety of shops and laboratories from which a wider variety of industrial type wastes emanated. The wastes were discharged to the buildings sanitary sewer collection system. The acid neutralization tanks (described in Section 4.2.2) received the majority of variant waste materials. USAEHA conducted sampling from 1974 to 1975 and showed discharges of alkaline cleaning agents, high concentration of hexavalent chromium that was likely rinse water from a chrome plating operation, 93 to 94 percent sodium hydrozide slugs, sulfuric acid that was likely a dip solution used to activate a metal surface for plating, copper pickling waste, sodium dichromate as part of a cleaning agent, parabenzoquinone likely from photographic processing effluent, ammonium persulfate from the printed circuit manufacturing shop, and acetone (Shaw 2007). It is unknown from where these samples were collected. A review of the effluents to the sewage system was undertaken for Building 2700. The effluents from Building 2700 posed a threat to the acceptability of waste discharged from the CWA to the regional sewer authority. Strong acids and bases discharged from the facility were a cause for the concern before the connection to the regional sewer authority. Following the visits by USAEHA in 1975 and 1976, an extensive effort was undertaken to locate sources of industrial waste in Building 2700. In a previous interview in the 2006 ECP, Fort Monmouth personnel indicated that no chemical wastes have been discharged to the sanitary sewer since the mid-1980s (Shaw 2007). A map of Building 2700 was not available at the time of the PA to show the locations and to indicate the specific waste streams that traveled to each limestone pit.

Evans Area

The EA STP (EA-1/AREE 1) was located along Marconi Road west of the Shark River in the northeastern portion of the EA. The plant was constructed in 1942 with a design capacity of 560,000 gallons of sewage per day, including wastewater from metal plating operations in Building 9007. The EA STP consisted of five storage/clarifying tanks, sludge drying beds, Building 9080 (STP control building and laboratory), and Building 9193 (KEMRON 2001). The wastewater received chlorination followed by prolonged retention in the primary settling tank. The sludge was pumped from the primary settling tank/clarifier to an anaerobic digester and discharged to sludge drying beds (sand filters) for dewatering (Earth Tech 1998). The chlorinated treated effluent water was discharged to the Shark River. Five stormwater outfalls along the Shark River were associated with the EA STP and suspected to have discharged untreated or partially treated sewage to the Shark River during storm events (Earth Tech 1994). The sludge disposal location is unknown (Earth Tech 1994). According to historical maps, prior to the construction of the EA STP, waste

was discharged to up to nine septic tank leach fields (Earth Tech 1994, KEMRON 2001). The EA STP was shut down in approximately 1981 when EA was connected to the South Monmouth County Regional Sewage Authority (Earth Tech 1998).

The Building 9080 at the EA STP consisted of three levels. The upper level contained the control room, a laboratory, a chlorine room, a storage room, and lavatories. The second level contained the sludge pumping room, a screening room, and a boiler room. The lower level of the building contained the raw sewage pump room and two suction wells. The floor of the pump room contained a sump; no details on how the contents of the sump were removed (e.g., discharged to the Shark River or pumped out and disposed of) were available (Earth Tech 1998).

The trickling filter (Tank B) had a mercury fill port in the center of the rotating liquid distribution mechanism. The trickling filter was connected to a secondary clarifier, which led to an outfall to the Laurel Gully Brook (Earth Tech 1998).

In November 1979, water was observed seeping from near the base of the primary clarifier, and soils appeared wet around the base of the northernmost clarifier tank on aerial photographs from 1969 and 1974.

4.2.4 Landfills and Disposal Areas

Main Post

- **Landfill (M-2/FTMM-02)** – The M-2 landfill is located in the southwestern corner of the MP, on the south bank of Mill Creek. The 6.5-acre landfill was in operation from 1964 until 1968 and was reportedly used for the general disposal of domestic and industrial wastes. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, asbestos-containing material (ACM), vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007).
- **Landfill (M-3/FTMM-03)** – The M-3 landfill is located between North Drive and Lafetra Creek in the west-central part of the MP. The 5.9-acre landfill operated from 1959 until 1964. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007).
- **Landfill (M-4/FTMM-04)** – The M-4 landfill is located in the area bounded by Avenue of Memories to the south, North Drive to the north, Mill Creek to the west, and Wilson Avenue to the east. The 1.4-acre landfill operated from 1955 until 1956. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007).
- **Landfill (M-5/FTMM-05)** – The M-5 landfill is located just north of the M-4 landfill in the area bounded by North Drive to the south, an unpaved road south of Building 198 to the north, Wilson Avenue to the east, and Mill and Parkers Creeks to the west. The 3.2-acre landfill operated from 1952 until 1959. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs,

sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007).

- **Landfill (M-8/FTMM-08)** – The M-8 landfill is located in the northern portion of the MP north of former Building 697 in a bend of Parkers Creek. The 7.2-acre landfill operated from 1962 until 1981 and was reportedly used for the disposal of domestic and industrial waste. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007). Following closure of the Landfill (M-8/FTMM-08), all solid wastes generated at Fort Monmouth were directed to the Monmouth County landfill.
- **Landfill (M-12/FTMM-12)** – The M-12 landfill is located on the MP, on the southern side of Husky Brook, west of Murphy Drive. Dates of operation for the 1.4-acre landfill are unknown. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007). Metal, concrete, and other types of landfill debris were observed protruding from the stream bank along Husky Brook (Shaw 2007).
- **Landfill (M-14/FTMM-14)** – The M-14 landfill is located on the MP, on the northern side of Husky Brook, west of Murphy Drive. The 6.9-acre landfill operated from 1965 until 1966. The types of materials disposed of in the landfill have been reported to include construction debris, scrap metal, ACM, vegetative waste, unwashed containers that previously held hazardous materials/wastes, outdated photographic chemicals, small quantities of outdated drugs, sludge from the MP Sanitary Treatment Plant, soot and boiler scale, incinerator ash, oil spill debris, oil filters, batteries, fluorescent tubes, and electronic components (Shaw 2007). Metal, concrete, and other types of landfill debris can be observed protruding from the stream bank along Husky Brook (Shaw 2007).
- **Post Burning Area (M-6)** – The Post M-6 Burning Area consisted of open-air wood burning in small pits located within the M-3 landfill (Shaw 2007). The dates of operation are unknown. According to interviews with Fort Monmouth personnel, the open-air wood burning practices were conducted to reduce the volume of waste materials being placed into the M-3 landfill.
- **Incinerators (Buildings 274, 697, 1075, 1076, 1150, and 1210)** – No documentation was found regarding the use of the incinerator in Building 274, and it is likely that the use was for destruction of classified waste. Aerial photographs from the 1940s do not identify the incinerator; therefore, the operational lifetime of this incinerator was likely short (Shaw 2007). A multiple chamber, in-line incinerator was located in former Building 697. This incinerator was designed to burn 10 tons per day of general refuse and was later used to burn 1 to 2 tons of classified paper. Operations included firing the incinerator with wood and then charging it continuously with cardboard boxes and paper sacks filled with classified waste. In 1974, approximately 10 tons of classified material were incinerated each month. In 1981, a new incinerator was installed in Building 697 to dispose of classified documents, computer paper, and computer cards. Ashes were taken to landfills, such as landfill M-8. This incinerator operated until 1990 and was dismantled in 1993. The building was demolished in 2003 (Shaw 2007).

An incinerator was located on the third floor of Building 1075, which was the Patterson Army Health Clinic. It was only operated for trial burns and was shut down in 1975 shortly after it was placed online (Shaw 2007). Regulated medical waste from the clinic was transported for

incineration off-post. A medical waste incinerator was located on the western side of Building 1076 and operated from 1970 to 1993. The incinerator was designed to burn 50 pounds per hour of Type 4 pathological waste. Approximately 30 pounds per day of infectious paper and plastic material from Patterson Army Hospital was burned in this incinerator. The original incinerator was replaced in 1974 with an incinerator that was designed to burn wastes at a rate of 100 pounds per hour. Incinerator ash was disposed of in the Fort Monmouth landfill M-8. The incinerator was closed in December 1992 and then demolished in November 1993. After the incinerator was closed, pathological wastes were shipped off-post for disposal (Shaw 2007).

The Building 1150 incinerator was removed from the basement in 1993. It is unknown when the paper waste incinerator went online; it was not discussed in a 1971 or 1974 air pollution engineering survey (Shaw 2007).

The Building 1210 incinerator was a multiple chamber incinerator used to destroy 300 to 500 pounds of classified paper, 2 or 3 days per week. A 1971 report indicated the unit would not meet New Jersey particulate emission standards and should be upgraded or discontinued (Shaw 2007). A 1974 solid waste survey noted that classified wastes were incinerated at Building 697 and did not mention the existence of an incinerator at Building 1210. No incinerator currently exists at Building 1210 (Shaw 2007).

Charles Wood Area

- **Landfill and Disposal Area (CW-3/FTMM-24 and CW-3A/FTMM-25)** – According to a former report, a suspected subsurface landfill previously was located in the Landfill Area (CW-3/FTMM-24). The report indicated administrative type wastes and wood debris were placed in the 1-acre landfill during the 1940s. During a previous investigation, interviews were conducted with long-term employees who stated the suspected landfill in the 1940s did not exist (Weston 1995).

During the 1980s and into the early 1990s, the site was used as a surface disposal site for the accumulation of construction debris. The area was located in the southwestern portion of the CWA. A 1993 site visit concluded the area was being used as a construction rubble dump. Material observed included soil piles, brush, concrete, wood demolition debris, wood pallets, metal, and polyvinyl chloride (PVC) pipe. Cleanup of the construction debris was completed in May 1995 (Shaw 2007). In 1997, 29 test pits were excavated at the former surface disposal area, and no waste materials were encountered (Shaw 2007). The approximate area of the Disposal Area (CW-3A/FTMM-25) was 116,000 ft² (2.6 acres). The area was north of the former power plant and west of CW-3. In a previous interview, a Fort Monmouth employee stated the area was used as a disposal area. Buildings at the CWA were razed in 1955 and 1956. The demolition debris from these buildings possibly was placed in this area. The western part of this area had not revegetated by 1986. During the 1993 site visit, small debris was observed in the woods (Weston 1995). Several test pits were excavated in 1997 to determine if the site was previously used as a landfill. Upon excavating the test pits, waste materials, primarily in the form of construction debris, were observed within the test pits. The debris contained concrete, asphalt, brick, wood, glass, and assorted scrap metals. Coal ash was also observed in the test pits (Shaw 2007).

- **Sludge Disposal Site (CW-9/FTMM-31)** – A sludge disposal site was located in the southwestern section of the CWA golf course, south and southeast of Building 2044 (Shaw 2007). Sludge was generated from the MP Sanitary Treatment Plant and CWA STP since the 1940s and stored in this area before being used as a soil conditioner and fertilizer on the Suneagles Golf Club course (Shaw 2007). Based on aerial photographs, the Sludge Disposal Site was active from the 1940s to the 1980s (EDR 2023).
- **Incinerator** – A paper waste incinerator was located in Building 2700. It is unknown when the incinerator was first used, but it was reportedly removed from the building in 1993 (Shaw 2007).

Evans Area

- **Farmhouse Dump** – The Farmhouse Dump was located between Marconi Road and Watson Avenue, in the northern part of the EA. A farmhouse existed on this site, and part of the residents used this area as a private dump in the 1930s. The Army purchased the property in 1941 and used it as a practice area. Surface debris that included a pile of new 5-gallon empty buckets, two partially buried and rusted 55-gallon drums, and various other small empty containers had been observed scattered over the dump area (Earth Tech 1994). The woods were littered with scrapped vehicles, glass, partially buried cable, general domestic waste, and construction debris (Earth Tech 1996). No indication was found that the Army used the area for open dumping.
- **Surface Dump 1 (EA-13A/AREE 13)** – Surface Dump 1 (EA-13A/AREE 13) was located at the intersection of Watson Road and Monmouth Boulevard, west of the Gate 3 parking area. Surface Dump 1 was used for open dumping beginning in the 1940s until the 1970s based on aerial photographs (EDR 2023). Debris, including construction rubble, telephone poles, small oil containers, and other domestic waste, was scattered across the site. During interviews, employees noted that metal plating waste and batteries may have been placed in Surface Dump 1 (FWEC 2001). A few building foundations and an antenna footing also were observed at the site (Earth Tech 1996). An unnamed stream runs along the northwestern boundary of the dump area and flows into the Laurel Gully Brook, approximately 100 feet north of the estimated dump boundary. A 1953 aerial photograph shows a liquid-containing pit of unknown origin within the boundary of Surface Dump 1. The past use of the pit is unknown, and the pit was no longer present at the site in 1994 (Earth Tech 1996).
- **Surface Dump 2** – Surface Dump 2 was located south of Watson Avenue and west of Laurel Gully Brook. The site was used for open dumping beginning in the 1940s until approximately 1981 based on aerial photographs (EDR 2023). Surface debris in the area included an engine block, shopping carts, mattress, small tent camping trailer, building rubble, wood, stone, and leaves. The area was expanded to include the area adjacent to the service road that parallels Watson Avenue (Earth Tech 1994). Numerous 1-quart oil containers were scattered along the area adjacent to the service road. Some piles of rubble contained lids of 55-gallon drums (Earth Tech 1996).
- **Construction Landfill** – A suspected landfill was located along Marconi Road south of Building 9002. Facility personnel stated only construction debris was placed in the landfill (Earth Tech 1994). The landfill was first discussed in a documentary video of the EA (CECOM 1993), and limited information on the landfill (e.g., time frame in use and contents) is known.

4.2.5 Other Potential Sources of PFAS

In addition to AFFF-related PFAS sources, other potential sources of PFAS may be associated with the use of some types of pesticides, car washes, engine lubricants, paint shops, laundry or waterproofing facilities, and photographic processing facilities. Document research, site visit, and interviews resulted in identification of other potential PFAS sources at Fort Monmouth. Potential non-AFFF PFAS sources at Fort Monmouth are noted in Figures 4-1a, 4-1b, and 4-1c and discussed below:

Main Post

- **Maintenance Activities** – Several Vehicle Maintenance Shops (Buildings 44, 64, 108, 109, 159, 161, 163, 166, 197, 277, 403, 464, 483, 484, 485, 750, 751, 753, 754, 756, 900, 1105, and 1122) were on the MP. Twelve of those buildings have been demolished (Buildings 44, 64, 108, 109, 161, 163, 197, 403, 464, 483, 485, and 751). Former Building 44 was used for motor vehicle maintenance and repair. Former Building 64 was reportedly used for motor vehicle and heavy equipment repair in 1954. Former Building 108 was the former motor pool. Former Building 109 was a vehicle fuel storage building that was located north of Building 108 along the railroad track

on the northeastern boundary of the facility (Shaw 2007). Building 159 was constructed in 1941 and used for testing/tuning engines, parts cleaning, and welding. Former Buildings 161 and 163 were used for testing/tuning engines and welding, battery charging, machining, steam cleaning, and/or parts cleaning. Building 166 was used for machining, welding, battery filling, vehicle repair, and autobody work. Prior to closure of Fort Monmouth, the building housed the facility sign shop, roads, and grounds shop, and administrative offices. Former Building 197 was used for parts cleaning and mower repair. Building 277 was constructed in 1951 and used for welding, grinding, woodworking, soldering, and brazing. Former Building 403 was used for brazing and finishing. Former Building 464 was used for heavy equipment maintenance and repair and parts cleaning. Former Building 483 was used for soldering and parts cleaning. Building 484 was constructed in 1941 and used for auto body work, spray painting, and welding. Former Building 485 was used for cleaning and electrical equipment repair (Shaw 2007).

The MP Motor Pool collectively included Buildings 750, 751, 753, 754, and 756. Building 750 was constructed in 1987 and used by the Directorate of Logistics as a storage area for the MP fleet vehicles (Shaw 2007). Former Building 751 was associated with fuel dispensing operations in the area. Building 753 was constructed in 1987 as a storage building and was converted for routine maintenance of vehicles. Building 754 was constructed in 1987 and used as a small engine repairs facility. Building 756 was an open-sided building constructed in 1992 and previously used by the military for generator storage. Building 756 was subsequently used for storage of material associated with the motor pool, including lead acid batteries, empty fuel cans, and gas cylinders (Shaw 2007).

Building 900 was constructed in 1941 and was a former vehicle repair/motor pool facility where solvent-based cleaners were previously used as part of routine vehicle maintenance activities. Stormwater from Building 900 discharged to Oceanport Creek northwest of Building 977 and north of Building 908. Building 1105 was constructed in 1942 and used for silver brazing (Shaw 2007). Building 1122 is a one-story building built on a slab in 1971 that was used for vehicle repairs by Fort Monmouth personnel prior to the closure of Fort Monmouth. Degreasing solvents, which generated hazardous waste, were used in Building 1122 (Shaw 2007).

- **Wash Racks** – Buildings 166, 750, and 1122 had closed-loop wash water recycling systems (Shaw 2007). Although Buildings 166 and 750 are still standing, Building 1122 was demolished in 2014 (U.S. Army 2019). Building 1122 floor drains were connected to the car wash facility in Building 1124 until they were sealed in June 2007. Building 1124 contained an enclosed car wash facility east of the repair shop. All wash water was recycled and reused, and an active OWS was in place (Shaw 2007). A 1993 renovation plan, which detailed the replacement of the floor drains, shows that the drains were connected to the sanitary sewer system. Several vehicles were steam cleaned each day during the summer, primarily in an open bay area between Buildings 482 and 484. The wash water then drained to a storm sewer manhole with a grease trap. The sewer discharged to an open ditch along the boundary of the MP, which eventually led to Oceanport Creek (Shaw 2007). Although a complete list of products used for wash rack operations MP is not available, it is understood that common products used in vehicle washing may have contained minor amounts of PFAS-containing material and would not be considered a significant source of PFAS contamination. As a result, the potential PFAS impacts were determined to be unlikely. Significant PFAS impacts would have been more likely from emergency vehicles being serviced at the wash racks.
- **Photographic Processing** – Printing operations took place in Buildings 104, 105, and 106. Photographic processing historically took place in Buildings 10, 100, 109, and 814. Information regarding photographic processing in Buildings 10, 100, and 814 was sparse, which may indicate that photographic processing operations were limited in scope and/or duration. In 1966, Building 814 was constructed to fulfill the need for laboratory facilities for photography classes

with an influx of students during the Korean War (Rejan 2009). Building 814 is still standing and not currently in use, but it was previously used as a dental clinic until approximately 2003 and then as a locker room for the military academy prep school until 2011. Buildings 10 and 100 have been demolished.

Buildings 104, 105, and 106 (U.S. Army Field Printing Plant) served as printing and photographic processing facilities from the time of their construction in the 1940s until they were demolished in the early 1980s. Industrial hygiene reports from the 1950s indicated photographic processing and printed material reproduction also was conducted at Building 288, including photographic equipment experimentation and repair (Shaw 2007). Building 551 industrial processes included the use of carbon tetrachloride, benzol, acids, and photographic chemicals in an adjacent Quonset hut in the early 1950s. This hut has since been demolished. Building 1150 was constructed in 1952. Film development activities previously were conducted in the basement (Parsons 2015).

A complete list of photographic processing chemicals used, stored, or disposed of at the MP is not available. However, the use of PFAS-containing materials did not become prevalent in the photography industry until approximately the mid-1990s (Kodak 2002). Given the operational period of the MP, the likelihood of PFAS impacts due to the use, storage, or disposal of photographic processing chemicals is assumed to be low.

- **Chemical/Hazardous Material Storage** – Several buildings were used for Chemical/Hazardous Material Storage (Buildings 121, 122, 123, 482, 484, and the Shed between Buildings 480 and 481) at the MP. Dedicated hazardous material storage occurred at Buildings 121, 122, and 123. The hazardous waste storage area consisted of three prefabricated storage buildings and two outside drum storage pads. The three storage buildings and two drum storage pads were situated on a concrete reinforced pad. Buildings 121 and 122 were used to store a variety of hazardous waste, including flammables, combustibles, corrosives, reactive, oxidizers, poisons, RCRA listed wastes, and RCRA characteristic wastes. Both buildings were constructed of concrete and measured 200 ft². Each building structure was compartmentalized into six sections, enabling separate storage of incompatible wastes, and each compartment had a sump that served as secondary containment that could hold up to 270 gallons. The structures were temperature controlled and had a fire suppression system within each compartment. Building 123 was used to store out-of-service transformers, capacitors, switches, and other types of electrical equipment that contained non-polychlorinated biphenyl oils. Batteries were also stored within the building. A sump that served as secondary containment was underneath the grated flooring and could hold up to 1,300 gallons. The building was equipped with a thermostat-controlled exhaust fan and had a fire suppression system (Shaw 2007). Details about the type of fire suppression system that was installed in Buildings 121, 122, and 123 were not available at the time of the PA.

Building 482 was constructed in 1941 and was used to store some hazardous material and served as the central receiving and storage area for the inbound Universal/Class D materials. Used oils, off-specification fuels, oil filters, oil spill debris, antifreeze, oil-based paints, latex paints, all types of batteries, and fluorescent lamps were received, consolidated, and stored at the facility (Shaw 2007). The building also had a built-in sprinkler system for fire suppression and trenches/sumps with secondary containment capacity of approximately 8,600 gallons (Shaw 2007, Fallon 2014). In the 1970s, the building was used as a furniture shop where spray painting operations were conducted. The building was renovated in 2001. After the renovation, Building 482 served as a primary recycling and processing area for Class D/Universal waste materials. Waste material recycled and/or processed at the facility included antifreeze, oil filter/oil spill debris, aerosol paints, and solvents (Shaw 2007).

Building 484 was initially used for vehicle maintenance, spray painting, and welding, and then later (in 2006) used as the primary processing facility for the Class D Universal Waste Recycling Center

for Fort Monmouth and area DoD facilities. Fifteen satellite accumulation areas (hazardous, non-hazardous, and universal wastes) were present in Building 484. Similar to Building 482, the building was equipped with secondary containment systems to capture liquids if a spill occurred. The floor drains and sumps in the building were part of the secondary containment and were not connected to the sanitary or storm systems (Shaw 2007).

A small outdoor household hazardous waste storage shed was located between Buildings 480 and 481 inside an enclosure. The household hazardous waste shed was managed by the Directorate of Public Works (DPW) Environmental Branch (Shaw 2007).

- **Pesticides** – Pesticide mixing, storage, and control operations were conducted in the Former Pesticide Storage and Mixing Buildings (Buildings 498 [FTMM-16] and 65 [FTMM-17]) (Shaw 2007). Building 498 was constructed in 1939 and is located north of the marina. Pesticide management practices were conducted at the site until the late 1950s (DPW 1996). Based on aerial photographs, Building 498 was used for a pesticide control shop in the early 1940s and 1950s before this function was moved to Building 65 (EDR 2023). Pesticide mixing reportedly was conducted inside Building 498 with rinse water dumped in a sink that went to the sanitary sewer (Weston 1995). Building 65 was used for storage and mixing of pesticides, including diazinon and malathion, between 1950 and the early 1980s. Building 65 has been demolished but was previously located on the southeastern side of the MP (Shaw 2007). Although a complete list of pesticides used, stored, or disposed of at the MP is not available, the use of fluorinated pesticides was infrequent until approximately the mid-2000s (Alexandrino et al. 2022). Given the operational period of the MP, the likelihood of PFAS impacts due to pesticide use, storage, or disposal is assumed to be low.
- **Fuel Distribution and Storage Areas** – Several fuel distribution and storage areas (Buildings 75, 290, 296, 812, and 886) were identified on the MP in addition to the Building 699 gasoline service station discussed in Section 4.2.1. Building 75 was a former aboveground bulk fuel storage tank farm consisting of two 210,000-gallon tanks and a tank truck unloading rack. The tanks were installed to provide Fort Monmouth with a 30-day backup of No. 2 fuel oil (Fallon 2014). Building 290 (FTMM-55) was a former military vehicle repair and maintenance facility that included four USTs (one waste oil UST, one diesel UST, and two gasoline USTs) and a gasoline dispenser island. The site formerly served as a military motor pool. Building 290 was demolished in 2000. The four USTs were removed between 1991 and 1994 (USACE 2020). Site FTMM-54 (Building 296) was a former fuel distribution facility that was abandoned and then rediscovered during a renovation project at Building 296. The facility dates back to the 1940s and is located north of Sherrill Avenue near Building 296. The UST system was composed of 12 USTs (one 550-gallon steel No. 2 fuel oil tank, nine 1,000- to 2,000-gallon steel gasoline USTs, and two 1,000-gallon steel diesel fuel USTs) (U.S. Army 2015). The fuel products were distributed from remote pumping islands located more than 450 feet from the UST field and within 50 feet of Parkers Creek (a sensitive estuarine marsh area). Between November and December 1993, the previously unknown fuel distribution system was removed, and the source of contamination was eliminated.

Based upon historical records, Building 812 has been identified as a former gasoline distribution area. The former gasoline station was located off Murphy Drive in what is now a parking lot for Building 812. The former site sits directly across from the former Patterson Army Health Clinic. Aerial photographs dating from 1947 through 1961 clearly identify the gasoline station. The station is no longer visible in an August 1971 aerial photograph (Shaw 2007). An aboveground storage tank (AST) adjacent to Building 886, located off Murphy Drive on the MP, had a storage capacity of 250,000 gallons and stored No. 2 fuel oil (Shaw 2007).

- **Laundry Facility** – Building 700 Dry Cleaners operated as a dry-cleaning facility from approximately 1947 until 1993 based on aerial photographs. In addition to use as a dry cleaner, the building was used for office space. A 500-gallon solvent UST on the southern side of Building 700 was removed in 2011 and was observed to be heavily corroded and leaking in several places (Parsons 2013). Although a complete list of products used for laundry operations at the MP is not available, it is understood that common products used in wet and dry laundry facilities may have contacted low concentrations of PFAS-containing materials and would not be considered a significant source of PFAS contamination. In addition, the activities associated with the post laundry were not tied to any other known areas where PFAS-containing materials were used, stored, or disposed of. As a result, the potential PFAS impacts were determined to be unlikely. Significant PFAS impacts would have been more likely from fire protective clothing and turnout gear being laundered at the facilities.

Charles Wood Area

- **Maintenance Activities** – Vehicle repair and maintenance activities were conducted at four CWA buildings. One or more of the Vehicle and Maintenance Shops (Buildings 2501, 2502, 2503, and 2507) operated from approximately 1947 to 1993. General maintenance shops were located in Buildings 2502 and 2503. Building 2502 was previously a sheet metal shop and Building 2503 was a Machine Shop (Shaw 2007). Vehicle maintenance activities were conducted in three vehicles bays at Building 2507. Building 2507 was also used as the Tactical Vehicle Repair Shop (Shaw 2007). Petroleum and solvents were used during the vehicle maintenance operations. In addition, a former motor pool was noted to exist at Building 2501. The motor pool was present in the 1950s and was abandoned between 1980 and 1990 (Shaw 2007).
- **Wash Racks** – Vehicle Wash Racks north of Building 2261 and at Building 2046 were present at the CWA. A 1947 aerial photograph shows a vehicle wash rack and vehicle storage area located in the northwestern portion of the CWA, north of Building 2261 (Shaw 2007). Building 2046 was constructed in 1998 and used as a golf cart and equipment wash rack with a closed loop wash water recycling system. Building 2046 was also used for pesticide mixing until 2001. Although a complete list of products used for wash rack operations at the CWA is not available, it is understood that common products used in vehicle washing may have contained minor amounts of PFAS-containing material and would not be considered a significant source of PFAS contamination. As a result, the potential PFAS impacts were determined to be unlikely. Significant PFAS impacts would have been more likely from emergency vehicles being serviced at the wash racks.
- **Photographic Processing** – Photographic processing was historically conducted in Buildings 2525, 2700, and 2705 at the CWA. Photographic processing operations in Buildings 2525 and 2705 began during the 1940s and early 1950s and were conducted on a more limited scope and timescale compared to operations conducted in Building 2700. Photographic processing operations in Buildings 2705 and 2525 ceased by 1980. Building 2525 plans show all floor drains were connected to the sanitary sewer system (Shaw 2007).

Photographic processing was conducted on a large scale and over a long time period in Building 2700 in multiple areas of the building (Calibre 2013), primarily between 1954 and 1993. A 2003 site visit confirmed all photographic development processes had converted to digital technology (Shaw 2007). Photographic processing facilities identified in the building include the following: two photolithography laboratories (4D116/4D120 and 4C129/4D130) in four rooms; the Navy Printing Shop; the Engineering Prints Reproduction Section (Room 1B126-200); the Graphic Studio (Room 1AB200); the Photo Laboratory (Room 1B200); and the Photo Optics Laboratories (Rooms 4D108, 110, 113, 114, and 4C111).

The photolithography laboratories were used from an unknown time and conducted processes that used solvents but were noted to have been converted to administrative and computer laboratories during a 2006 inspection (Shaw 2007). The Navy Print Shop operated daily to print graphics, including media in bigger forms, using 11 Xeroxographic machines. The Engineering Prints Reproduction Section employed 31 workers at the U.S. Army Signal R&E Laboratory in 1958. The section used three large diazo machines to develop photo prints. The prints contained diazonium compounds sensitive to blue and ultraviolet light. The prints were developed with ammonia and two continuous blueprinting machines, a small ozalid machine and dryer to develop prints made from original drawings or printed material in the presence of ammonia, and a number of smaller duplicating machines and reproductions machines (Shaw 2007). Given the scale and types of operations, it was noted in 1974 that this area generated a significant amount of industrial waste. By 1978, the waste was reduced due to improved operations, reduction in force, better processing techniques, and the use of a waste collection vendor (Shaw 2007). At one time, the photographic processing laboratory processed approximately 5,000 8- by 10-inch and 18,000 4- by 6-inch photographs annually (Parsons 2003).

By 2003, all imaging services converted to digital technology. All photographic processing and printing in the building had ceased by 2006, and the rooms were converted primary to administrative offices and computer laboratories (Shaw 2007).

A complete list of photographic processing chemicals used, stored, or disposed of at the CWA is not available. However, the use of PFAS-containing materials did not become prevalent in the photography industry until approximately the mid-1990s (Kodak 2002). Given the operational period of the CWA, the likelihood of PFAS impacts due to the use, storage, or disposal of photographic processing chemicals is assumed to be low.

- **Hazardous Waste Storage** – Hazardous waste storage facilities at the CWA included Buildings 2500 (AOC-7), 2630, 2631, 2632, and 2624. Building 2500 (AOC-7) was used as a temporary hazardous waste storage area and was located in the southwestern section of the CWA east of Building 2708. While in use, the storage area was on a 1-acre, unpaved, open, sandy lot, surrounded by a 7-foot-high fence. The site was reportedly only used for a 6-month period in 1987 for temporary storage of hazardous waste in drums. Drums were collected and staged at Building 2500 as part of a program to remove improperly labeled drums from Fort Monmouth (Shaw 2007). The drums were stored on wood pallets, usually without secondary containment along the interior fence line at the site. The drums were sampled, labeled, and then arranged for disposal. One known release of material (the pesticide malathion) occurred from this area; however, the amount of material released was considered small (Weston 1995).

Buildings 2630, 2631, and 2632 were used as a combined 90-day hazardous waste storage area. The facility consisted of three prefabricated storage buildings and one outside drum storage pad. Perimeter fencing with barbed wires and alarms was present. The structures were situated on a concrete reinforced pad. Florescent lamps were stored inside a storage shed on the northeastern corner of the facility. Buildings 2630 and 2631 were used to store a variety of hazardous wastes, including flammables, combustibles, corrosives, reactives, oxidizers, poisons, RCRA-listed wastes, and RCRA characteristic wastes. The side-by-side buildings were constructed of concrete. Both building structures were compartmentalized into six equally sized sections that enable incompatible wastes to be stored separately. Each compartment had a sump serving as secondary containment. The structures were temperature controlled and had fire suppression systems within each compartment. The buildings replaced former Building 2624 (same location) in 1992 (Earth Tech 1994). The drum storage pad was constructed of concrete and was designed to hold 32 55-gallon drums and had 1 large sump that served as secondary containment. The sump could hold up to 900 gallons. The drums stored on the outside storage pad were protected by polyethylene covers, which prevented rainwater from coming into contact with the drums. Rainwater could not

enter the containment sump and was visually inspected for the presence of a sheen before the rainwater was discharged. The containment sump had a manually operated valve that allowed accumulated rainwater to be drained out to the ground in the adjacent area when the valve was in the open position (Shaw 2007).

- **Pesticides** – Several buildings at the CWA southwest of the golf course were associated with the Pesticide Storage and Mixing Area (Buildings 2044 [CW-6/FTMM-28] 2046, 2070, and 2071) and referred to as the golf course maintenance complex. The golf course maintenance complex was approximately 25,000 ft² (0.6 acres), and usage of the complex may predate the Army's 1942 purchase of the golf course. Both pesticides and herbicides were formerly stored and mixed in this area. Building 2044 was used prior to 1974 until 2001. Based on a 1979 inventory, pesticides that were used on the golf course and stored in Building 2044 in significant quantities included malathion, floriablen, resmethrin, Borocel IV, chlordane, and Dibrom. The compounds that were used in large quantities include carbaryl (Seven), malathion, chlordane, and diazinon. Some of the herbicides mentioned included 2,4-dichlorophenoxyacetic acid, Dacthal, 2,4,5-trichlorophenoxyacetic, and sodium arsenite (Shaw 2007). The former golf course groundskeeper, who had been part of the grounds crew for 33 years, indicated during an interview that pesticides and herbicides were kept in a steel igloo or two outdoor metal igloos and were mixed in two areas: 1) a grass-covered area south of the igloo, and 2) on pavement near the door of the southern side of former Building 2044. The paved area had a drain that emptied into a ditch in the woods behind Building 2044 (Weston 1995). In a previous interview, the supervisor said that pesticides containers were not rinsed but were disposed of to the landfill as is. Prior to 1980, the containers would have been disposed of at a landfill on the MP such as Landfill M-8 (Weston 1995).

Former Building 2046 was constructed in 1998 as a golf cart and equipment wash rack (closed loop) and was also used for pesticide mixing until 2001 (Shaw 2007).

Buildings 2070 and 2071 were also potential pesticide mixing areas after their construction in 1991 and 1999, respectively. Building 2070 was used to store golf course maintenance and landscaping equipment, such as mowers and tractors. Building 2071 was used as the equipment repair facility. A 12- by 20-foot mixing pad constructed of reinforced concrete with a 2½-inch curbing functioning as secondary containment was present near the buildings and may have functioned as a pesticide mixing location (Shaw 2007). The integrated pest management plan indicated that all current CWA pesticide mixing operations were conducted at Buildings 2070 and 2071 in the southwestern corner of the CWA golf course (USACE 2009).

The exact time frame that storing and mixing of pesticides at Buildings 2044 (CW-6/FTMM-28) 2046, 2070, and 2071 ended was unknown at the time of the PA. Reports vary on a general time frame of the mid-1980s to 2001. Other reports indicate pesticide mixing was still conducted at Buildings 2070 and 2071 in 2009 (USACE 2009). Although the mixing pad was present at Buildings 2070 and 2071, conflicting information indicated the pad may never have been used for pesticide mixing. The Army used outside contractors for mixing and application of pesticides since the mid-1980s for all of Fort Monmouth (USACE 2009). As part of the contractor responsibilities, all mixing of pesticides was conducted off-post, and mixing or storage of pesticides or herbicides was no longer conducted at the CWA after the mid-1980s (Shaw 2007).

Although a complete list of pesticides used, stored, or disposed of at the CWA is not available, the use of fluorinated pesticides was infrequent until about the mid-2000s (Alexandrino et al. 2022). Given the operational period of the CWA, the likelihood of PFAS impacts due to pesticide use, storage, or disposal is assumed to be low.

- **Fuel Distribution and Storage Areas** – Building 2652 was in the vicinity of a former motor pool west of Guam Lane and was used as a storage area for grass cutting equipment and as a fueling location for the golf course. Building 2567 was an active gasoline service station operated by the

AAFES Organization (Shaw 2007). The single-wall steel UST had a capacity of 5,000 gallons and stored unleaded gasoline. One fuel dispensing pump was at the site (Shaw 2007). The UST and associated piping were removed in 1993. Building 2652 was first observed in a 1947 photograph and last observed on 1995 aerial photographs (EDR 2023).

Evans Area

- **Maintenance Activities** – Operations generally were conducted from approximately 1951 to 1993 for maintenance activities at the EA (Buildings 9009, 9010, 9013, 9023, 9044, 9061, 9090, 9094, 9345, and 9393). Most of these buildings that housed maintenance activities (Buildings 9009, 9023, 9044, 9061, 9090, 9094, and 9393) have been demolished and limited details are available on their use. Unspecified vehicle maintenance activities were conducted at Building 9009. Buildings 9044 and 9061 were identified as Motor Pool facilities. Building 9044 contained a machine shop, a mechanics shop, an instrument shop, a battery maintenance shop, a paint room, and an electrical shop. Building 9061 was also used as a wood shop. Shops within Buildings 9094 and 9393 were used for general maintenance operations. Building 9345 was identified as a Machine Shop. Generator maintenance was conducted within Building 9090. Buildings 9010, 9013, and 9023 were used as metal shops (Earth Tech 1994).
- **Storage Yards (2)** – Two storage yards that were identified in the southern portion of the EA in a 1957 aerial photograph (Earth Tech 1994) were used for open storage of containers likely from approximately 1957 to the late 1960s. Former Storage Yard 1 was located along the southern operational area boundary near Building 9184 and was approximately 50,000 ft². Former Storage Yard 2 was located south of Building 9306 and was approximately 6,250 ft². The storage yards may have been used for the open storage of containers and other miscellaneous materials (Earth Tech 1998, FWEC 2001). Hazardous waste, including flammables, combustibles, corrosives, reactive, oxidizers, poisons, RCRA-listed wastes, and RCRA characteristic wastes, was stored in large quantities (Shaw 2007).
- **Chemical/Hazardous Materials Storage** – Dedicated chemical/hazardous waste materials storage occurred in Buildings 9009, 9044, 9044A, 9057, 9094, 9205, 9246, 9380, 9392, and 9614 in the EA (Earth Tech 1996). Building 9009 was in the maintenance area of the EA and used as an accumulation area to store hazardous materials. Building 9094, formerly part of the motor pool, was used for storage for cleaning supplies (i.e., approximately 80 gallons of bleach, ammonia, and other cleaners) (FWEC 2001). In addition, a waste oil UST in the building was removed and replaced with a waste oil AST. Both Buildings 9009 and 9044 were used to store waste oil (Earth Tech 1996). Flammables were stored in the storage igloo near Building 9044 and in Buildings 9044A, 9246, and 9614 (Earth Tech 1996). Building 9044A was a Dymaxion deployable unit (20-foot circular hut constructed of corrugated steel) and was located on an impervious paved area to prevent discharges to the soil. Building 9057 was a 30- by 36-foot structure constructed in 1942 for use as a garage and contained two 55-gallon drums that stored transformer oil. Building 9205, which was a storage igloo, stored bulk chemicals prior to removal of the igloo (Earth Tech 1996). Building 9380 stored varying amounts of hazardous waste between 1992 and 1998 and was used for less than 90-day storage of materials. There were no documented releases of hazardous materials from Building 9380 (FWEC 2001). Paints, thinner, primers, and waste solvents were stored in the Building 9392 paint shop (Earth Tech 1996).

During the document research and site visit, no additional potential PFAS-containing material use, storage, or disposal were identified.

4.3 POTENTIAL OFF-POST AND POST TRANSFER PFAS SOURCES

The search to identify potential off-post PFAS sources (i.e., not related to historical Army operations at Fort Monmouth), although not exhaustive, included review of significant potential contributors (i.e., airports, landfills, WWTPs, and upstream industrial operations such as metal plating and photographic processing). In addition, EDR conducted a search of state and Federal environmental databases for the Fort Monmouth property and adjacent properties (EDR 2023). No known PFAS-containing material releases have occurred post transfer on Fort Monmouth property. Most of the surrounding area is urban and heavily populated and is used primarily for residential or commercial use. Figures 4-2a and 4-2b show the fire stations, airports, helipads, solid waste landfills, WWTPs, and car washes located within a 5-mile radius from the MP and CWA and the EA, respectively. In an evaluation of the potential effects of the Fort Monmouth sewage plants on water quality, it was noted that the conditions of streams entering the MP and CWA were similar or poorer quality due to a variety of upstream industrial operations, such as Styrofoam cup manufacturing, metal plating, and photographic processing, as well as domestic discharges (Shaw 2007). Although no specific upstream sources were identified in the stream evaluation, industrial operations that were historically upstream (e.g., metal plating and photographic processing) may represent potential off-post PFAS sources.

5. SUMMARY OF PA RESULTS

The areas evaluated for potential PFAS use, storage, or disposal at Fort Monmouth were further refined during the PA process and categorized as an AOPI or not retained. Areas not retained as AOPIs are discussed in Section 5.1. AOPIs are discussed in Section 5.2.

5.1 AREAS NOT RETAINED AS AOPIs

Based on analysis of information obtained during this PA, the areas described below were not retained as AOPIs. These areas were previously identified as potential PFAS sources (e.g., AFFF storage, car washes, automobile maintenance, paint shops, photographic processing, pesticide use or storage, WWTPs, landfills) at Fort Monmouth. However, PA research does not indicate that PFAS-containing material was used, stored, or disposed of at these areas. A brief site history and the rationale for eliminating the areas as AOPIs are presented in Table 5-1.

Table 5-1. Summary of Areas Not Retained as AOPIs at Fort Monmouth

Area Description	Dates of Operation	Relevant Site History	Rationale
Main Post			
Fire at Building 293 Battery Test Facility	1980s	The Building 293 Battery Test Facility was destroyed by a fire in the 1980s and then subsequently rebuilt (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. It was reported that PFAS-containing AFFF was not used to extinguish the fire.
Primary Airfield, Auxiliary Fields, Hangars, and Helipad 1	1918 to Early 1940s (Airfields and Hangars) 1944 to Early 2019 (Helipad 1)	Three airfields (two auxiliary fields) and a row of hangars were present on the installation starting in 1918. Based on aerial photographs, all three airfields were closed by the early 1940s. However, hangars were reused as classrooms and laboratories until 1957 (Freeman 2023). Helipad 1 is located on the MP and was in operation from 1944 to early 2019. Helipad 1 operations included rotary wings landing and takeoffs.	Use of the airfields and hangars was discontinued prior to the widespread use of PFAS-containing materials. No evidence that PFAS-containing materials were used, stored, or disposed of. No structures are associated with Helipad 1; no evidence of an emergency management or fire suppression system (e.g., permanently fixed crash carts or foam system) is associated with Helipad 1.
Building 283 Plating Shop	1934 to 1954	Building 283 operated as a plating shop from 1934 to 1954. Metal plating operations were conducted in Bay 122 and used silver, copper, zinc, and sodium cyanides; copper and nickel sulfate; chromic oxide; and cadmium oxide (Shaw 2007). In 1954, metal plating operations were moved to the Building 2700 Myer Center Facility at the CWA. It is unknown if Building 283 was connected to the MP Sanitary Treatment Plant.	Metal plating operations were conducted at Building 283; however, the time frame is prior to the common use of PFAS-containing materials in plating operations.

Table 5-1. Summary of Areas Not Retained as AOPIs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Former MP Sanitary Treatment Plant (FTMM-20)	Before 1931 to 1941	The plant operated until 1941 and was labeled on a 1935 map. The approximate location was where former Building 259 was located in 1995 (Weston 1995).	Dates of operation precede the use of PFAS-containing materials.
Landfills (M-2/FTMM-02, M-3/FTMM-03, M-4/FTMM-04, M-5/FTMM-05, M-8/FTMM-08, M-12/FTMM-12, and M-14/FTMM-14)	Various (generally from 1952 to 1981)	Potential wastes included domestic and industrial waste, sludge from the sanitary treatment plant and STP, construction debris, and hazardous materials/wastes (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. However, if investigations at the MP Sanitary Treatment Plant or CWA STP indicate the presence of PFAS, the landfills may be reconsidered for further evaluation.
Post Burning Area M-6	1959 to 1964	Post Burning Area M-6 consisted of open air wood burning in small pits. Post Burning Area M-6 was located at Landfill 3 (M-3/FTMM-03) (Shaw 2007).	Dates of burning area operation precede the wide use of PFAS-containing materials; therefore, it is unlikely PFAS-containing materials were used, stored, or disposed of. AFFF application is also not a standard practice when disposing of wood and other debris by burning.
Incinerators (Buildings 274, 697, 1075, 1076, 1150, and 1210)	Various (generally from 1934 to 1993)	Incinerators were used for the destruction of classified and medical waste, documents, computer paper/cards, and trail burns (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of at the incinerators.
Vehicle Maintenance Shops (Buildings 44, 64, 108, 109, 159, 161, 163, 166, 197, 277, 403, 464, 483, 484, 485, 750, 751, 753, 754, 756, 900, 1105, and 1122)	Various (generally 1987 to mid-1990s)	Vehicle Maintenance was conducted in these buildings and operations included vehicle maintenance, equipment repair, and vehicle cleaning and welding (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. No evidence that fire trucks with PFAS-containing AFFF were maintained at these facilities. SDSs were unavailable for review at the time of the PA.
Wash Racks (Buildings 166, 482, 484, 750, 1122, and 1124)	Various (generally from 1940s to 2011)	The wash racks used to have a closed loop wash water recycling system. Buildings 482 and 484 were open bays used to steam clean vehicles. Building 1124 was an enclosed car wash. Wash water was recycled and reused and an active OWS was in place (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. SDSs were unavailable for review at the time of the PA; however, the minor amounts of PFAS-containing material used in vehicle washing would not be considered a significant source of PFAS contamination. No evidence that fire trucks with PFAS-containing AFFF were washed or otherwise maintained at the facilities.

Table 5-1. Summary of Areas Not Retained as AOPs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Photographic Processing (Buildings 10, 100, 104, 105, 106, 109, 288, 551, 814, and 1150)	1950 to 1980s	Photographic processing was conducted in these buildings, and operations included document printing, film development, and industrial processes. Many of these buildings have since been demolished (Parsons 2015, Shaw 2007).	Based on the period of operation for Fort Monmouth, the dates of photographic processing at the facilities pre-date the prevalent use of PFAS-containing chemicals in the photography industry. SDSs were unavailable for review at the time of the PA.
Chemical/Hazardous Material Storage (Buildings 121, 122, 123, 482, 484, and Shed between Buildings 480 and 481)	1950s to 1970s (Buildings 121, 122, 123, and 484) Documented use in the 2000s (Building 482 and Shed between Buildings 480 and 481)	Large quantities of chemical and hazardous materials were used and stored in the buildings, which included flammables, combustibles, corrosives, reactives, oxidizers, and poisons (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of.
Former Pesticide Storage and Mixing (Buildings 498 [FTMM-16] and 65 [FTMM-17])	Early 1940s to 1950s (Building 498) 1950 to early 1980s (Building 65)	Pesticide mixing, storage, and control operations were conducted within these buildings (Shaw 2007). The mixing operations included a rinse water that was dumped in the sink and went to the sanitary sewer (Weston 1995).	Based on the period of operation for Fort Monmouth, the dates of pesticide use at the facility pre-date the use of fluorinated pesticides. SDSs were unavailable for review at the time of the PA.
Fuel Distribution and Storage Areas (Buildings 75, 290, 296, 812, and 886)	Various (generally from 1947 to 1994)	Fuel distribution areas stored various types of fuel and gasoline in motor pools and USTs (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. No evidence that an AFFF-based fire suppression system was installed at this facility.
Building 700 Dry Cleaners	Approximately 1947 to 1993	Building 700 Dry Cleaners operated as a dry-cleaning facility from approximately 1947 to 1993. A former solvent UST was located on the southern side of the building (Parsons 2013).	SDSs were unavailable for review at the time of the PA; however, the dry-cleaning activities associated with Building 700 were not tied to any other known areas where PFAS-containing materials were used, stored, or disposed of. As a result, the potential PFAS impacts were determined to be unlikely.
Charles Wood Area			
Helipad 2 and Possible Airfield	1960 to Early 2019	Helipad 2 was used for rotary wing landing and takeoff (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. Historical documentation refers to an airfield (USCAE 2009); however, only Helipad 2 appears in aerial photographs. No structures were associated with Helipad 2, and no evidence of an emergency management or fire suppression system was associated with Helipad 2.

Table 5-1. Summary of Areas Not Retained as AOPIs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Metal Plating at Building 2532 in the Former Watson Laboratory Complex	Various (generally from mid-1940s to 1951)	Watson Laboratory facilities' operations included cleaning of crystals, quartz etching, soldering, and gold (and other metal) plating. These operations involved chemicals such as carbon tetrachloride, ammonium bifluoride, cadmium sulfate, and sulfuric acid (Shaw 2007, Shaw 2008).	Metal plating operations were conducted; however, the time frame is prior to the common use of PFAS-containing materials in plating operations.
Landfill and Disposal Area (CW-3/FTMM-24 and CW-3A/FTMM-25)	1940s to 1990 (CW-3) 1942 to 1957 (CW-3A)	Construction and demolition debris were disposed of in this landfill and disposal area. The disposed of material included soil piles, brush, concrete, metal, PVC pipe, and glass (Shaw 2007).	Dates of operation for Landfill CW-3A precede the wide use of PFAS-containing materials.
Sludge Disposal Site (CW-9/FTMM-31)	1940s to 1980s	Sewage sludge from both the MP Sanitary Treatment Plant and the CWA STP was temporarily stored at a Sludge Disposal Site south of Building 2044 before being used as a soil conditioner and fertilizer at the Suneagles Golf Club course (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. However, if investigations at the MP Sanitary Treatment Plant and CWA STP indicate the presence of PFAS, the Sludge Disposal Site may be reconsidered for further evaluation.
Building 2700 Incinerator	Unknown to 1993	Incinerator was used to burn paper (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of at the incinerator.
Vehicle Maintenance and Shops (Buildings 2501, 2502, 2503, and 2507)	Approximately 1947 to 1993	Vehicle maintenance was conducted in Building 2507, which contains three vehicle bays (Shaw 2007). Building 2502 previously operated as a sheet metal shop and Building 2503 was used as a Machine Shop (Shaw 2007). Petroleum and solvent use would be common during vehicle maintenance operations.	No evidence that PFAS-containing materials were used, stored, or disposed of. No evidence that fire trucks with PFAS-containing AFFF were maintained at these facilities. SDSs were unavailable for review at the time of the PA.
Vehicle Wash Racks North of Building 2261 and at Building 2046	Before 1947 to unknown (north of Building 2261) 1998 to 2011 (Building 2046)	A 1947 aerial photograph shows a vehicle wash rack and vehicle storage area located in the northwestern portion of the CWA, north of Building 2261 (Shaw 2007). Building 2046 was used as a golf cart and equipment wash rack and had a closed loop wash water recycling system.	No evidence that PFAS-containing materials were used, stored, or disposed of. SDSs were unavailable for review at the time of the PA; however, the minor amounts of PFAS-containing material used in vehicle washing would not be considered a significant source of PFAS contamination. No evidence that fire trucks with PFAS-containing AFFF were washed or otherwise maintained at this facility.

Table 5-1. Summary of Areas Not Retained as AOPIs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Photographic Processing (Buildings 2700, 2525, and 2705)	1940s to 1951 (Buildings 2525 and 2705) 1954 to 1993 (Building 2700)	Photographic processing was conducted in Buildings 2525 and 2705. Building 2525 plans show all floor drains were connected to the sanitary sewer system (Shaw 2007). Photographic processing was conducted on a large scale and over a long period in Building 2700. By 2006, the chemical photographic processing operation in Building 2700 had been converted to digital photo processing (Calibre 2013).	Based on the period of operation for Fort Monmouth, the dates of photographic processing at the facilities pre-date the prevalent use of PFAS-containing chemicals in the photography industry. SDSs were unavailable for review at the time of the PA.
Hazardous Waste Storage Facility (Buildings 2500 (AOC-7), 2630, 2631, 2632, and 2624)	Approximately 1953 to 1987	Hazardous waste was stored in large quantities including flammables, combustibles, corrosives, reactives, oxidizers, poisons, RCRA-listed wastes, and RCRA characteristic wastes (Shaw 2007). Building 2500 (AOC-7) was used as a temporary hazardous waste storage area in 1987 (Weston 1995).	No evidence that PFAS-containing materials were used, stored, or disposed of.
Pesticide Storage and Mixing Area (Buildings 2044 [CW-6, FTMM-28] 2046, 2070, and 2071)	Before 1974 to 2001 (Building 2044) 1998 to 2001 (Building 2046) 1991 to 2001 (Building 2070) 1999 to 2001 (Building 2071)	Pesticides were stored at Building 2044 inside a steel igloo on a concrete base and in two smaller metal igloos directly outside Building 2044. Pesticides were mixed outside the igloos and Building 2044 (Shaw 2007). Pesticide mixing also was conducted in Building 2046 until 2001. Pesticide mixing likely was conducted on a 12- by 20-foot reinforced concrete mixing pad with secondary containment until pesticide mixing was conducted off-post by contractors.	Based on the period of operation for Fort Monmouth, the dates of pesticide use at the facility pre-date the use of fluorinated pesticides. SDSs were unavailable for review at the time of the PA.
Fuel Distribution and Storage Areas (Buildings 2652 and 2567)	Before 1997 to at least 1995	One UST and one fuel dispensing pump were located at Building 2562 (Shaw 2007). Building 2567 was an active gasoline service station operated by the AAFES Organization (Shaw 2007).	No evidence that PFAS-containing materials were used, stored, or disposed of. No evidence that a AFFF-based fire suppression system was installed at these facilities.

Table 5-1. Summary of Areas Not Retained as AOPs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Evans Area			
Landfills (Farmhouse Dump, Surface Dump 2, and Construction Landfill)	1930s to 1941 (Farmhouse Dump) Pre-1941 to 1981 (Surface Dump 2 and Construction Landfill)	Construction and surface debris were dumped in these landfills. Materials observed at Surface Dump 2 included shopping carts, an engine block, a mattress, building rubble, wood, stone, 1-quart oil containers, lids of 55-gallon drums, and construction debris (Earth Tech 1994, Earth Tech 1996). The Farmhouse Dump was used prior to 1941 by the farmhouse's residents (Earth Tech 1994); observed surface debris included empty 5-gallon buckets, partially buried and rusted 55-gallon drums, and various other small empty containers.	Dates of operation for the Farmhouse Dump precede the wide use of PFAS-containing materials. No evidence of use, storage, or disposal of PFAS-containing materials at Surface Dump 2 and Construction Landfill.
Maintenance Activities (Buildings 9009, 9010, 9013, 9023, 9044, 9061, 9090, 9094, 9345, and 9393)	Approximately 1951 to 1993	Building 9009 was used for unspecified vehicle maintenance. Buildings 9044 and 9061 were designated as motor pools. General maintenance shops were identified as Buildings 9094 and 9393. Building 9345 was identified as a Machine Shop and Building 9090 was a generator maintenance shop (Earth Tech 1994).	No evidence that PFAS-containing materials were used, stored, or disposed of. No evidence that fire trucks with PFAS-containing AFFF were maintained at these facilities. SDSs were unavailable for review at the time of the PA.
Storage Yards (2)	1957 to late 1960s	Two storage yards for open storage of containers were identified in the southern portion of the EA in a 1957 aerial photograph (Earth Tech 1994). The storage yards may have been used for the open storage of containers and other miscellaneous materials (Earth Tech 1998).	No evidence that PFAS-containing materials were used, stored, or disposed of. SDSs were unavailable for review at the time of the PA.
Chemical/Hazardous Waste Materials Storage (Buildings 9009, 9044, 9044A, 9057, 9094, 9205, 9246, 9380, 9392, and 9614)	Various (generally from 1951 to 1993)	Chemical/hazardous waste and materials, including waste oil, paints, thinner, primers, and waste solvents, were stored in large quantities (Earth Tech 1994, Earth Tech 1996, FWEC 2001).	No evidence that PFAS-containing materials were used, stored, or disposed of.

5.2 AOPIs

Based on analysis of information obtained during document research, personnel interviews, and/or site reconnaissance, 12 areas (3 at the MP, 5 at the CWA, and 4 at the EA) were categorized as AOPIs and are presented in Table 5-2 and Figures 5-1a, 5-1b, and 5-1c. Site research conducted for this PA indicates that PFAS-containing material use, storage, or disposal is potentially suspected at these areas.

Table 5-2. Summary of AOPIs at Fort Monmouth

Area Description	Dates of Operation	Relevant Site History	Rationale
Main Post			
Building 282 Fire Station	1935 to before 2011	Building 282 operated as a fire station from 1935 to before 2011. AFFF was historically stored on fire trucks and in 5-gallon pails inside the fire station. AFFF was also stored on a mobile foam trailer that was kept outside the station. Fire training activities were conducted in front of Building 282, including training with AFFF. Floor drains were present in Building 282, which connected to a sump in the basement before discharging to the sanitary sewer system (Shaw 2007).	Fire station with reported AFFF storage within the station and fire training activities with AFFF conducted in front of the building.
MP Sanitary Treatment Plant (FTMM-19/AOC-3)	1941 to 1975	The MP Sanitary Treatment Plant was built in 1941 and treated waste streams from the MP, including wastewater from fire department operations in the Building 282 Fire Station. Effluent from the MP Sanitary Treatment Plant was discharged to Parkers Creek (Shaw 2007). Sludge was transported to the CWA golf course and to landfills (Weston 1995). The MP Sanitary Treatment Plant was closed in 1975 when the MP sewer system was connected to the NEMCRSA system.	The MP Sanitary Treatment Plant may have received potentially PFAS-containing wastewater from fire department operations in the Building 282 Fire Station. AFFF storage and use were documented at the fire station and may be present in the waste stream. The MP Sanitary Treatment Plant was not designed to treat PFAS.
Building 699 Parking Lot Fuel Spill	1990s	Fuel (gasoline) was released by a tanker truck refilling a UST at the Building 699 Gasoline Service Station. The release occurred during the 1990s, and fuel flowed into the parking lot east of Building 699. The fire department reportedly used AFFF to contain the gasoline spill, and the residue was flushed into the storm drain.	Gasoline service station with reported AFFF used to contain a fuel spill.

Table 5-2. Summary of AOPIs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Charles Wood Area			
Building 2536 Fire Station and Building 2542 AFFF Storage	Before 1947 to the late 1990s (Building 2536) Late 1980s to approximately 2007 (Building 2542)	The original Building 2536 Fire Station was constructed prior to 1947 and used as a fire station. The fire station was destroyed by fire during the late 1990s. AFFF was not used to extinguish the fire at the original Building 2536 Fire Station. AFFF was historically stored on fire trucks inside the fire station. According to personal interviews, AFFF was stored within an adjacent storage area (Building 2542). Fire training activities were conducted in front of Building 2536, including training with AFFF.	Fire station with reported AFFF storage within the fire trucks at the station and fire training activities with AFFF conducted in front of the building. Building 2542 was reported to store AFFF.
Building 2560 Fire Station	2001 to 2011	Building 2560 operated as a fire station from 2001 to 2011. AFFF was historically stored on fire trucks and inside the fire station. Fire training activities, including training with AFFF, were conducted in front of Building 2560.	Fire station with reported AFFF storage within the station and fire training activities with AFFF conducted in front of the building.
Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads	1998 to 2011 (Building 2629) 1990 to 2011 (Building 2628)	Building 2629 was constructed in 1998 and used as a fire training facility (Langan 2022a). According to personnel interviews, AFFF training was not conducted inside Building 2629; however, AFFF may have been part of fire training activities conducted outside the building. Building 2628 was a one-story storage area constructed in 1990 and used by the Army's firefighting division. AFFF was among the equipment that was stored in Building 2628 (Langan 2022a). Both buildings were taken out of service in approximately 2011 (Langan 2022b). Five concrete simulation pads in the vicinity of Buildings 2628 and 2629 were used for fire and spill training. This AOPI was evaluated as part of the Phase I ESA/PA (Langan 2022a) and Phase II ESA (Langan 2022b) conducted for the Tinton Falls Commercial Development Parcel, which included soil and groundwater samples collected in December 2021 to determine PFAS detections within the firefighting operations area.	Fire training activities with reported AFFF use (Building 2629 and Spill/Burn Simulation Pads) and reported AFFF storage (Building 2628 Storage Area).

Table 5-2. Summary of AOPIs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23)	1954 to 2011 (Building 2700) 1952 to 2002 (CW-1 and CW-2)	Building 2700 was built in 1954 and used extensively as a laboratory. Known as the Myer Center, operations within the building included electrochemical research, growing and shaping of crystals, various metal plating operations, mixing of magnetic powders, machining, welding, spray painting, use of solvents for equipment cleaning, and other miscellaneous laboratory operations using standard laboratory chemicals. The CW-1 and CW-2 Wastewater Treatment Lime Pits contained limestone for neutralizing liquid waste from Building 2700 prior to discharge to the CWA STP.	PFAS-containing surfactants were likely used as a mist suppressant during the plating process and may be present in the plating waste stream. The CW-1 and CW-2 Wastewater Treatment Lime Pits received most liquid waste materials from Building 2700, including potentially PFAS-containing wastes from metal plating operations.
CWA STP (CW-5/FTMM-27)	1942 to 1975	The CWA STP was built in 1942 and treated waste streams from the CWA, including wastewater from metal plating operations in Building 2700. A tributary to Wampum Brook received the CWA STP effluent. Sludge was transported to the CWA golf course and to landfills (Shaw 2007). The CWA STP was closed in 1975 when the CWA sewer system was connected to the NEMCRSA system.	PFAS-containing surfactants were likely used during the plating process and may be present in the plating waste stream. The CWA STP received potentially PFAS-containing wastewater from metal plating operations in Building 2700. The CWA STP was not designed to treat PFAS.
Evans Area			
Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area	1942/1943 to before 1993 (Building 9031) Documented use in 1993 (Building 9634)	Building 9031 was constructed in 1942/1943 and operated as a fire station until 1993. Fire trucks from the Building 9031 Fire Station were fueled and maintained at the MP (Earth Tech 1994). AFFF was historically stored on fire trucks inside the fire station. Fire training activities were conducted in front of Building 9031, including training with AFFF. The Building 9634 Firefighting/Spill Response Storage Area was used to store firefighting and spill response materials (Earth Tech 1994).	Fire station with reported AFFF storage within the station and fire training activities with AFFF conducted in front of the building. Building 9634 may have been used for AFFF storage.

Table 5-2. Summary of AOPs at Fort Monmouth (Continued)

Area Description	Dates of Operation	Relevant Site History	Rationale
Buildings 9007 (EA-3/AREE 3/ FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities	1950 to 1976 (Building 9007) 1950s to early 1970s (Buildings 9011, 9037, and 9097)	Building 9007 was constructed in 1917 and used as a metal plating shop from at least 1950 until 1976. Former employees indicated during an interview that the Building 9007 Metal Plating was a messy operation where spills were common, and plating waste disposal may have occurred outside a door on the southwestern side of the building (EEI 1997). In addition, electroplating activities at the EA may have been conducted at Buildings 9011, 9037, and 9097 (Seres-Arcadis 2022). Waste streams from Building 9007 and other laboratories, including wastewater from metal plating operations, were reportedly discharged to a leach field located southwest of Buildings 9004 and 9005 until approximately 1970 when the building was connected to the EA STP (Earth Tech 1994). Metal plating wastes may also have also been discharged to a leach field located southwest of the intersection of Monmouth Boulevard and Marconi Road (Earth Tech 1996).	PFAS-containing surfactants were likely used as a mist suppressant during the plating process and may be present in the plating waste stream.
EA STP (EA-1/AREE 1)	1942 to 1981	The EA STP was built in 1942 and used to treat waste streams from the EA, including wastewater from metal plating operations in Building 9007. The EA STP was shut down in approximately 1981 when the EA was connected to the South Monmouth County Regional Sewage Authority (Earth Tech 1994, Earth Tech 1998). When in operation, treated effluent from the EA STP was discharged to the Shark River. The EA STP was historically associated with five stormwater outfalls along the Shark River, which may have discharged untreated or partially treated sewage during storm events (Earth Tech 1994).	PFAS-containing surfactants were likely used during the plating process and may be present in the plating waste stream. The EA STP received potentially PFAS-containing wastewater from metal plating operations in Building 9007. The EA STP was not designed to treat PFAS.
Surface Dump 1 (EA-13A/ AREE 13)	1940s to at least the 1970s	Located on Monmouth Boulevard west of the intersection with Watson Avenue, Surface Dump 1 was used for open dumping from the 1940s until at least the 1970s. Former Fort Monmouth employees have indicated that Surface Dump 1 may have been used to dispose of plating waste and batteries. A liquid-containing pit was identified on a 1953 aerial photograph; the contents of the pit were unknown (Earth Tech 1994).	PFAS-containing surfactants were likely used as a mist suppressant during the plating process and potentially present in the plating wastes that may have been disposed of in Surface Dump 1.

A summary of the preliminary CSM is presented in Section 5.2.1. AOPI overviews and CSM summaries for each AOPI are presented in Sections 5.2.2 through 5.2.13.

5.2.1 Preliminary CSM

A preliminary CSM was prepared for each of the installation's AOPIs in accordance with the *USACE Engineer Manual on Conceptual Site Models, EM 200-1-12* (USACE 2023) and USEPA guidance. The preliminary CSMs identified potential human receptors and chemical exposure pathways based on current and/or reasonably anticipated future land uses. The preliminary CSMs identified soil and groundwater pathways as potentially complete.

Based on the documented or potential historical use, storage, or disposal of PFAS-containing materials at Fort Monmouth, affected media are likely to consist of soil, groundwater, surface water, and sediment. Release and transport mechanisms include dissolution/desorption from soil to groundwater, runoff/dissolution/adsorption with surface water or stormwater, and recharge to groundwater from surface water. While other potential exposure media (i.e., soil and sediment) besides drinking water sources (i.e., groundwater and/or surface water) may be impacted by PFAS, direct ingestion via drinking water is the most likely exposure route, and thus the Army's primary concern for human exposure. Therefore, the focus of the Army's PA program is on potential human exposures via drinking water ingestion. The potential for human exposures to PFAS through non-drinking water pathways has not yet been established and may be evaluated in the future if it is determined that those pathways warrant further consideration. The CSMs presented in this report focus on drinking water pathways via groundwater and surface water that are known to be used as a source of potable water.

The potable water at the MP and CWA is supplied by New Jersey American Water Supply, which obtains its water from surface water sources, as discussed in Section 2.8. Potable water for the EA is supplied by Wall Township, which sources its water from eight groundwater wells and the Manasquan Reservoir. Three of the supply wells for Wall Township (Imperial Park Plant) are located on or adjacent to the EA. EDR and NJDEP database well records indicate that a number of agricultural, domestic, or industrial use wells are located within a 1-mile radius of the three operational areas of Fort Monmouth.

A groundwater exposure pathway is considered potentially complete where constituents of interest (COIs) could migrate from the AOPI source area to groundwater that is used for drinking water. Otherwise, the groundwater exposure pathway is considered incomplete. The following parameters are used to determine if an AOPI source area had a potentially complete groundwater exposure pathway:

- AOPIs located upgradient or in the vicinity of drinking water sources and that have the potential to influence groundwater associated with these potable sources are a potentially complete groundwater exposure pathway for drinking water receptors.
- AOPIs located outside the vicinity or downgradient from potable sources (drinking water wells) are considered to have an incomplete groundwater exposure pathway.

The soil exposure pathway is considered potentially complete where COIs could be present in soil. A surface water exposure pathway is considered potentially complete where COIs could be present in or migrate to a surface water body (e.g., a reservoir or large river) that serves as a potable water source. No on-post surface water features are used as a drinking water source, nor is surface water migration a potential exposure medium for off-post drinking water receptors. Surface water at the MP includes portions of Mill Creek, Parkers Creek, Lafetra Creek, Husky Brook, Husky Brook Lake, Oceanport Creek, and the Shrewsbury River tidal estuary. Surface water at the CWA includes portions of Wampum Brook and an unnamed tributary to Wampum Brook. Surface water at the EA includes portions of Laurel Gully Brook and the tidal Shark River. Figures 5-1a, 5-1b, and 5-1c present the locations of the AOPIs at the MP, CWA, and EA, respectively. AOPI-specific CSM summaries are provided in Tables 5-3 through 5-14.

5.2.2 Building 282 Fire Station AOPI Rationale and CSM

The Building 282 Fire Station was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to reported AFFF storage and use.

Building 282 is located on the MP, at the northwestern edge of Baker Circle southeast of Greenly Field, and operated as a Fire Station from 1935 until before 2011. Historically, the Fort Monmouth Fire Department maintained one ladder truck with a 100-foot ladder, two 1,000-gallon pumper trucks, two 2,000-gallon squad trucks, one rescue truck, and three cars used by fire chiefs and inspectors between the MP (Building 282 Fire Station) and CWA (Building 2536 Fire Station) (DoD 1995). According to personnel interviews, AFFF was stored on fire trucks and in 5-gallon pails within the Building 282 Fire Station. AFFF was also stored on a mobile foam trailer that was kept outside at the Building 282 Fire Station. The foam trailer was refilled from the 5-gallon pails of AFFF. Most of the refilling activities were conducted outside Building 282 but may have been conducted anywhere that AFFF was stored on-post. According to the former Battalion Chief, fire training with AFFF was conducted in front of the Building 282 Fire Station. Floor drains were present within Building 282, and a sump was located in the basement, both of which were connected to the sanitary sewer system (Shaw 2007). Ownership of Building 282 was transferred from the Army to FMERA in October 2016.

A visual inspection of Building 282 was conducted. Floor drains were observed in each bay. No storm drains are present in the front of Building 282, but storm drains and an outdoor spigot are located on the southern side of the building. Stormwater is collected by a subsurface stormwater drainage system that discharges to adjacent surface water bodies. The front of the Building 282 Fire Station, facing Hildreth Avenue, consists of four bays. The north bay is the only bay with a pull through to an east garage door. The building is surrounded by concrete to the west and asphalt to the north, east, south. Some grassy areas are present along the front of Building 282 facing Hildreth Avenue.

Table 5-3. AOPI CSM Information Profile – Building 282 Fire Station

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Building 282 is a T-shaped brick structure underlain by soil. The building foundation material is unknown. The exterior ground material is concrete and asphalt, with some grassy areas. Surface water flows southeast toward Oceanport Creek. Stormwater collected by the subsurface drainage system leads to adjacent surface water bodies.
	Latitude, longitude	40.316241, -74.034773
	Size	1.18 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of AFFF to surface soils related to historical operations at the Building 282 Fire Station. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.

Table 5-3. AOPI CSM Information Profile – Building 282 Fire Station (Continued)

Profile Type	Information Needs	Preliminary Assessment Findings
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Building 282 Fire Station. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater flows to the southeast across this area and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.3 Main Post Sanitary Treatment Plant (FTMM-19/AOC-3) AOPI Rationale and CSM

The MP Sanitary Treatment Plant (FTMM-19/AOC-3) was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to potentially receiving PFAS-impacted wastewater from fire department operations, including documented AFFF storage and use at the Building 282 Fire Station.

The MP Sanitary Treatment Plant was located in the north-central portion of the MP, adjacent to Parkers Creek and north of Sherrill Avenue. The MP Sanitary Treatment Plant was constructed in 1941 to treat domestic waste streams from the MP. The plant had a capacity of 700,000 gallons of sewage per day and consisted of a bar screen and grit chamber, comminutor, primary and secondary settling tanks, a mixing and aeration tank, and a baffled contact chlorination tank. Sludge was treated in a three-stage anaerobic digester and discharged to under-drained sand beds for drying. Treated effluent was discharged to Parker’s Creek (Shaw 2007) and dried sludge was transported to the CWA golf course and landfills after treatment (Weston 1995). The MP Sanitary Treatment Plant was shut down in 1975 when the MP sewer system was connected to the NEMCRSA system, and the infrastructure was demolished in 1983 (Weston 1995). Ownership of most of the land associated with the MP Sanitary Treatment Plant was transferred from the Army to FMERA in December 2019. The northwestern portion of the MP Sanitary Treatment Plant AOPI is part of a parcel of BRAC property that remains under Army ownership.

A visual inspection of the MP Sanitary Treatment Plant was conducted. The MP Sanitary Treatment Plant infrastructure has been demolished. The property is currently a vacant, undeveloped lot covered with uncut grass and underbrush. Surface runoff flows to the northeast toward Parkers Creek.

Table 5-4. AOPI CSM Information Profile – Main Post Sanitary Treatment Plant (FTMM-19/AOC-3)

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Historical structures have been removed and the area is now occupied by an undeveloped lot covered with uncut grass and underbrush.
	Latitude, longitude	40.315318, -74.048111
	Size	2.38 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical wastewater treatment at the MP Sanitary Treatment Plant. The secondary contaminant migration and fate and transport considerations include downward

**Table 5-4. AOPI CSM Information Profile – Main Post Sanitary Treatment Plant (FTMM-19/AOC-3)
(Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
		contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents. Evidence of PFAS release from this AOPI to groundwater could also indicate contamination of other evaluated areas (see Table 5-1).
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the MP Sanitary Treatment Plant. Although on-post groundwater is not currently used for drinking water and groundwater use is restricted for most of this site, a potential future groundwater pathway exists on-post because no groundwater use restrictions are in place for the northwestern portion of this AOPI. In addition, groundwater flows to the northeast across this area and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.4 Building 699 Parking Lot Fuel Spill AOPI Rationale and CSM

The Building 699 Parking Lot Fuel Spill was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to the use of AFFF to clean the fuel spill.

Building 699 is located on the south side of Saltzman Avenue in the central portion of the MP and operated as a gasoline service station for the AAFES Organization. According to a personnel interview, fuel (gasoline) was released by a tanker truck refilling an UST located at the Building 699 Gasoline Service Station. The fuel flowed from the UST pad area and into the parking lot east of Building 699. AFFF was reportedly used by the fire department to contain the fuel spill and the residue was flushed into the storm drain. Ownership of the parking lot east of Building 699 where the fuel release occurred was transferred from the Army to FMERA in October 2016.

A visual inspection of Building 699 and the adjacent parking lot was conducted. The location of the former fuel pumps in the front of Building 699 and the former USTs to the east of the building were identified. The pumps and USTs are no longer present; however, a concrete pad where the tanks formerly sat remains. The parking lot itself is asphalt, and a grassy area is present to the south of the concrete pad. Several monitoring wells are present in the vicinity, some of which appeared abandoned and others that appeared to still be in use by the Army.

Table 5-5. AOPI CSM Information Profile – Building 699 Parking Lot Fuel Spill

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/ description	Building 699 is a rectangular brick, cinderblock, and glass structure on concrete underlain by soil. The exterior ground material is concrete and asphalt, with some grassy areas. Surface water flows southeast toward Husky Brook Lake and Husky Brook Creek. Stormwater collected by the subsurface drainage system leads to adjacent surface water bodies.

Table 5-5. AOPi CSM Information Profile – Building 699 Parking Lot Fuel Spill (Continued)

Profile Type	Information Needs	Preliminary Assessment Findings
	Latitude, longitude	40.312587, -74.046138
	Size	1.57 acres
Land Use	Current/future land use	Industrial/Commercial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	AFFF was reportedly used to contain a fuel spill in the parking lot east of Building 699. The primary release mechanism is the potential release of AFFF to mitigate the fuel spill at Building 699. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Building 699 Parking Lot Fuel Spill. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPi for the duration that the groundwater LUC remains on the property. However, groundwater flows to the southeast across this area and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.5 Building 2536 Fire Station and Building 2542 AFFF Storage AOPi Rationale and CSM

The Building 2536 Fire Station and Building 2542 AFFF Storage were identified as an AOPi following records reviews, interviews, aerial photograph review, and site reconnaissance due to reported AFFF storage and use. Buildings 2536 and 2542 are being considered a single AOPi due to their proximity and similar use.

Building 2536 was located along Laboratory Road at the CWA and operated as the original fire station from before 1947 until the building was destroyed by fire during the late 1990s. The building was not rebuilt and was replaced by the Building 2560 Fire Station in 2001. Historically, the Fort Monmouth Fire Department maintained one ladder truck with a 100-foot ladder, two 1,000-gallon pumper trucks, two 2,000-gallon squad trucks, one rescue truck, and three cars used by fire chiefs and inspectors between the CWA (Building 2536) and MP (Building 282) fire stations (DoD 1995). According to personnel interviews, AFFF was stored on fire trucks within the Building 2536 Fire Station, and fire training with AFFF was conducted in front of the building. Building 2542 was located north of Building 2536 and operated as a garage and fire department storage area from the late 1980s until approximately 2007. According to personnel interviews, AFFF was historically stored within Building 2542. Ownership of the parcel that included Buildings 2536 and 2542 was transferred from the Army to FMERA in May 2014.

A visual inspection of Buildings 2536 and 2542 was conducted. The former location of the Building 2536 Fire Station currently consists of grass and underbrush. Building 2542 has also been deconstructed and the area has been mostly covered by an asphalt parking lot and landscaped grass. Stormwater runoff flows toward the roadway, and no stormwater drainage features are apparent. According to personnel interviews, all surface soils in the vicinity have been regraded.

Table 5-6. AOPI CSM Information Profile – Building 2536 Fire Station and Building 2542 AFFF Storage

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Historical structures have been removed, and the area is now covered by asphalt, grass, and underbrush. Surface water generally flows northwest toward an unnamed tributary to Wampum Brook.
	Latitude, longitude	40. 294819, -74.084782
	Size	1.08 acres
Land Use	Current/future land use	Commercial/Industrial Use
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of AFFF to surface soils related to historical operations at the Building 2536 Fire Station and Building 2542 AFFF Storage. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Building 2536 Fire Station and Building 2542 AFFF Storage. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater flows to the northwest across this area and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.6 Building 2560 Fire Station AOPI Rationale and CSM

The Building 2560 Fire Station was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to reported AFFF storage and use.

Building 2560 is located south of Corregidor Road at the CWA and operated as a fire station from 2001 until approximately 2011. Building 2560 replaced the original fire station for CWA, which burned down during the late 1990s. According to personnel interviews, AFFF was stored on fire trucks and in 5-gallon pails within the Building 2560 Fire Station. The former Battalion Chief also indicated that fire training with AFFF was conducted in front of Building 2560. Ownership of Building 2560 was transferred from the Army to FMERA in May 2014. The building is currently vacant.

A visual inspection of Building 2560 was conducted. No floor drains or sumps were observed within the building. No storm drains are present in the front or back of the building. Stormwater at the back and northwestern corner of Building 2560 drains to a ditch that discharges to an unnamed tributary to Wampum Brook. Stormwater at the front of Building 2560 drains to storm drains at the roadway that discharge to the subsurface stormwater drainage system. Stormwater discharge pipes are observed entering the unnamed tributary to Wampum Brook at Guam Lane. Building 2560 is surrounded by a mixture of concrete, asphalt, and landscaped grass.

Table 5-7. AOPI CSM Information Profile – Building 2560 Fire Station

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/ description	Building 2560 is a rectangular brick structure underlain by soil. The building foundation material is unknown. The exterior ground material is concrete and asphalt, with some landscaped grass. Surface water flows north and northwest toward an unnamed tributary to Wampum Brook. Stormwater at the street is collected by the subsurface drainage system that leads to adjacent surface water bodies.
	Latitude, longitude	40.297226, -74.082907
	Size	3.06 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of AFFF to surface soils related to historical operations at the Building 2560 Fire Station. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at Building 2560. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater flows to the northeast across this area and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.7 Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads AOPI Rationale and CSM

The Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads were identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to reported AFFF storage and use. The Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads are being considered a single AOPI due to their proximity and similar use. This AOPI was evaluated as part of the Phase I ESA/PA (Langan 2022a) and Phase II ESA (Langan 2022b) conducted for the Tinton Falls Commercial Development Parcel, which included soil and groundwater samples collected in December 2021 to determine PFAS detections within the firefighting operations area.

Building 2629 is located in the southwest portion of the CWA, which was zoned for supply/storage and research development and testing while the CWA was in use (Shaw 2007). Known as the training tower, Building 2629 was constructed in 1998 and used as a fire training facility (Langan 2022a). According to personnel interviews, AFFF training was not conducted inside Building 2629; however, AFFF may have been part of fire training activities conducted outside the building. Building 2628 is a one-story warehouse that was constructed in 1990 and used as a storage area by the Army’s firefighting division. AFFF was among the equipment that was stored in Building 2628 (Langan 2022a). Buildings 2628 and 2629 were taken out of service in approximately 2011 (Langan 2022b). According to personnel interviews, the two concrete pads located south of Buildings 2628 and 2629 were used for spill training simulations and

the three concrete pads located northeast of Buildings 2628 and 2629 were used for fire training simulations. Ownership of Buildings 2628 and 2629 and the Spill/Burn Simulation Pads was transferred from the Army to FMERA in May 2014, and the area and buildings are currently vacant.

A visual inspection of the Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads was conducted. Building 2629 is a three-story structure surrounded by concrete and asphalt on all sides. A stormwater basin is present west of Building 2629. Building 2628 has garage doors at the eastern and western ends of the building. Stormwater drains are present adjacent to the garage doors at both ends of Building 2628, and a spigot is present at the western end of the building. Floor drains were observed in the concrete floors within Building 2628, and the building does not have electrical power. While inspecting the inside of Building 2628, a spill was noted that consisted of unidentified desiccated material. Two concrete pads are present to the south between the buildings and the southern fence line where tanker spill simulations were reportedly conducted. Three concrete pads with the remnants of a helicopter, cars, and trucks are located between the buildings and the eastern fence line where fire training simulations were reportedly conducted. The ground surface surrounding Buildings 2628 and 2629 is predominantly asphalt or concrete surrounded by overgrown grasses and underbrush. Surface runoff flows to the south from Building 2628 and to the east from Building 2629.

Table 5-8. AOPI CSM Information Profile – Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/ description	Building 2628 is a one-story rectangular metal structure and Building 2629 is a three-story rectangular metal tower. Both buildings are built on concrete underlain by soil. The exterior ground surface is asphalt or concrete surrounded by overgrown grass and underbrush. Surface water flows south from Building 2628 and east from Building 2629. Stormwater is collected by the subsurface drainage system that leads to adjacent surface water bodies.
	Latitude, longitude	40.291596, -74.086579
	Size	5.28 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/ release mechanisms	The primary release mechanism is the potential release of AFFF to surface soils related to historical fire training operations at the Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at Buildings 2628 and 2629 and the Spill/Burn Simulation Pads. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater in this area follows topographic contours, flowing to both the northwest and east, and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.8 Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23) AOPi Rationale and CSM

The Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23) were identified as an AOPi following records reviews, interviews, aerial photograph review, and site reconnaissance due to historical metal plating operations. Given the period of operation, PFAS-containing mist suppressants were likely used during metal plating activities and present within the metal plating waste stream. The Building 2700 Myer Center Facility and wastewater treatment lime pits are being considered a single AOPi due to their proximity and similar use.

The Building 2700 Myer Center Facility was located west of Laboratory Road at the CWA and operated as an R&D facility from 1954 until approximately 2011. The facility housed a wide variety of shops and laboratories, including metal plating and photographic processing operations (Shaw 2007). The Building 2700 Myer Center Facility was a significant source wastewater, constituting nearly 10 percent of the 0.4 million gallons per day of influent to the CWA STP during the mid-1970s (USAEHA 1976). Wastewater samples from Building 2700 collected by USAEHA from 1974 to 1975 included high concentrations of hexavalent chromium consistent with rinse water from chrome plating operations, sulfuric acid consistent with a dip solution used to activate a metal surface for plating, and copper pickling waste.

Industrial waste from Building 2700 was discharged to the building’s sanitary sewer collection system, which included two wastewater treatment lime pits. The wastewater treatment lime pits were constructed in 1952, concurrently with the Building 2700 Myer Center Facility, and were designed as acid neutralization tanks to treat corrosive wastes generated within the building. The CW-1 (FTMM-22) Wastewater Treatment Lime Pit was located in the courtyard area of Building 2700, and treated corrosive waste generated in the north and west wings of the building. The CW-2 (FTMM-23) Wastewater Treatment Lime Pit was located on the eastern side of Building 2700 and treated corrosive waste generated in the south and east wings of the building (Shaw 2007). Effluent exiting the two lime pits discharged to the CWA STP. Both wastewater treatment lime pits were demolished in 2002, and a new sewer pipe was installed to maintain the existing connection to the CWA sanitary sewer (Shaw 2007). According to personnel interviews, the bottom structure of the CW-2 (FTMM-23) Wastewater Treatment Lime Pit was left in place. Based on aerial imagery, the Building 2700 Myer Center Facility was deconstructed prior to 2019. Ownership of the parcel that included Building 2700 and the two wastewater treatment lime pits was transferred from the Army to FMERA in May 2014.

A visual inspection of the Building 2700 Myer Center Facility and wastewater treatment lime pits was conducted. The location of the former Building 2700 and CW-1 lime pit is a vacant, undeveloped lot covered with broken asphalt, stone, some grassy areas, and building demolition rubble. No stormwater drains or features are present. Several Army monitoring wells are present in the vicinity of the former CW-1 lime pit. The location of the former CW-2 lime pit is a vacant, undeveloped, overgrown grass lot. Surface runoff flows to the southeast toward the unnamed tributary to Wampum Brook.

Table 5-9. AOPi CSM Information Profile – Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23)

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/description	Historical structures have been removed and the area is now covered by broken asphalt, stone, building demolition rubble, and overgrown grassy areas. Surface water generally flows southeast toward an unnamed tributary to Wampum Brook.
	Latitude, longitude	40.295803, -74.087462
	Size	17.07 acres
Land Use	Current/future land use	Commercial/Industrial

Table 5-9. AOPI CSM Information Profile – Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23) (Continued)

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical metal plating operations at the Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23). The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater in this area follows topographic contours, flowing to both the northwest and east, and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.9 Charles Wood Area STP (CW-5/FTMM-27) AOPI Rationale and CSM

The CWA STP (CW-5/FTMM-27) was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to potentially receiving PFAS-impacted wastewater from metal plating operations. Given the period of operation, PFAS-containing mist suppressants were likely used during metal plating activities and present within the metal plating waste stream.

The CWA STP was located in the central portion of the CWA, near the intersection of Laboratory Road and Guam Lane. The CWA STP was constructed in 1942 to treat domestic waste streams from the CWA. The plant operated at 50 percent of its 800,000 gallons per day capacity (Shaw 2007). The primary treatment consisted of a grit chamber, screening, a comminutor, and primary settling. The secondary treatment consisted of a constantly and uniformly dosed biofilter followed by secondary clarification and chlorination. Sludge was treated in one of the two digesters, dewatered, and concentrated. It was then drawn off onto under-drained open sand beds for drying. Supernatant liquid from each digester and drainage from the drying beds were routed back the plant influent (Shaw 2007). Effluent from the CWA STP was discharged to an unnamed tributary to Wampum Brook, and sludge was transported to the CWA golf course and to landfills (Shaw 2007). The CWA STP was shut down in 1975 when the CWA sewer system was connected to the NEMCRSA system, and the infrastructure was demolished in 1983. Ownership of the land associated with the CWA STP was transferred from the Army to FMERA in May 2014.

A visual inspection of the CWA STP was conducted. The CWA STP infrastructure has been demolished and replaced with a swimming pool, pavilion, and landscaped lawn. In the eastern corner, the area is depressed and saturated with water.

Table 5-10. AOPI CSM Information Profile – Charles Wood Area STP (CW-5/FTMM-27)

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Historical structures have been removed and the area is now occupied by a swimming pool, pavilion, and landscaped lawn. An area saturated with water was observed in the eastern corner of the site.
	Latitude, longitude	40.296964, -74.079665
	Size	5.04 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical wastewater treatment at the CWA STP. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents. Evidence of PFAS release from AOPI could also indicate contamination of other evaluated areas (see Table 5-1).
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the CWA STP. On-post groundwater is not currently used for drinking water, and groundwater use is restricted at this site. Therefore, groundwater is not considered a complete exposure pathway for on-post receptors at this AOPI for the duration that the groundwater LUC remains on the property. However, groundwater in this area follows topographic contours, flowing to both the northwest and east, and has the potential to influence drinking water wells immediately downgradient from Fort Monmouth. Therefore, a complete groundwater exposure pathway potentially exists for off-post human receptors.

5.2.10 Evans Area STP (EA-1/AREE 1) AOPI Rationale and CSM

The EA STP (EA-1/AREE 1) was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to potentially receiving PFAS-impacted wastewater from metal plating operations. Given the period of operation, PFAS-containing mist suppressants were likely used during metal plating activities and present within the metal plating waste stream.

The EA STP was located along Marconi Road west of the Shark River in the northeastern portion of EA. The plant was constructed in 1942 with a design capacity of 560,000 gallons per day. The EA STP consisted of five storage/clarifying tanks, sludge drying beds, Building 9080 (STP control building and laboratory), and Building 9193 (KEMRON 2001). Wastewater treatment involved surperchlorination followed by prolonged retention in the primary settling tank. Sludge from the primary clarifier was pumped to an anaerobic digester and discharged to sludge drying beds (sand filters) for dewatering. Treated effluent from the EA STP was discharged to the Shark River, and the location for sludge disposal is unknown (Earth Tech 1994, Earth Tech 1998). According to historical maps, prior to the construction of the EA STP, waste was discharged to up to nine septic tank leach fields (Earth Tech 1994, KEMRON 2001).

In November 1979, water was observed seeping from near the base of the primary clarifier, and soils appeared wet around the base of the northernmost clarifier tank on aerial photographs from 1969 and 1974. Five stormwater outfalls were associated with the EA STP and suspected to have discharged untreated or partially treated sewage to the Shark River during storm events (Earth Tech 1994). Operations at the STP were shut down, and the plant was abandoned in approximately 1981 when the EA sewer system was connected to South Monmouth County Regional Sewage Authority (Earth Tech 1998) and the infrastructure was demolished prior to 1999 (KEMRON 2001). Ownership of the land associated with the EA STP was transferred from the Army to Township of Wall in August 2004.

A visual inspection of the EA STP was conducted. Except for two fire hydrants, all former EA STP infrastructure has been demolished. The property is currently being used as a dog park and consists of a mixture of grass and gravel.

Table 5-11. AOPI CSM Information Profile – Evans Area STP (EA-1/AREE 1)

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Historical structures have been removed, and the area is now occupied by a dog park and covered by a mixture of grass and gravel. Surface water flows to the southeast toward Laurel Gully Brook and the Shark River.
	Latitude, longitude	40.188913, -74.059759
	Size	1.98 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical wastewater treatment at the EA STP. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents. Evidence of PFAS release from AOPI could also indicate contamination of other evaluated areas (see Table 5-1).
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the EA STP. Although groundwater use is restricted at this site, groundwater in this area generally flows toward the Shark River and has the potential to influence on-post water supply wells and off-post domestic and water supply wells immediately downgradient. Therefore, a complete groundwater exposure pathway potentially exists for on-post and off-post human receptors.

5.2.11 Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities AOPI Rationale and CSM

Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities were identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to historical metal plating operations. Given the period of operation, PFAS-containing mist suppressants were likely used during metal plating activities and present within the metal plating waste stream. Buildings 9007, 9011, 9037, and 9097 Metal and Electroplating Facilities are being considered a single AOPI due to their proximity and similar use.

Building 9007 was located on Monmouth Boulevard, south of the intersection with Marconi Road, and was constructed in 1917. The building operated as a metal plating shop from approximately 1950 until 1976. According to former employees, the former Building 9007 Metal Plating Facility was a messy operation where spills were common, and metal plating waste may have been disposed of outside the door on the southwestern side of the building (EEI 1997). Metal plating waste may have also been discharged on the northwestern side of the building where stressed vegetation was historically observed (Earth Tech 1994). The building was abandoned in the late 1980s and demolished in 1999 (KEMRON 2001). Prior to 1970, liquid waste from sinks and drains discharged to a leach field located northeast of the building and southwest of Buildings 9004 and 9005 (EA-2/AREE 2). Plating wastes (e.g., halogenated and aromatic solvents, acids, cyanides, and metals) from Building 9007 may have also discharged to a leach field located southwest of the intersection of Monmouth Boulevard and Marconi Road (EA-23/AREE 23A) (Earth Tech 1998). Building 9007 was connected to the EA STP in approximately 1970, and a lime neutralization pit was constructed southwest of the building to neutralize metal plating waste before they were discharged to the sanitary sewer (Earth Tech 1994). The neutralization pit was located approximately 45 feet southeast of the area of stressed vegetation along the northwestern wall of Building 9007 (EEI 1997).

According to the Fourth Five-Year Review Report for the EA (Seres-Arcadis 2022), electroplating activities may have also been conducted in Buildings 9011, 9037, and 9097 between the 1950s through the early 1970s. However, the Enhanced Preliminary Assessment Report (Earth Tech 1994) suggested that electroplating was performed in Building 9097 but not Buildings 9011 and 9037. Buildings 9011, 9037, and 9097 were reportedly connected to the EA STP shortly after the facility’s construction, which would have received any waste from plating operations.

Stormwater runoff from the research and development area of the EA that included Buildings 9007, 9011, 9037, and 9097 historically discharged to six stormwater outfalls (Earth Tech 1994). Five of these outfalls discharged to Laurel Gully Brook and one of the outfalls discharged to the Shark River (Earth Tech 1996). All of these outfalls were suspected of carrying metal plating waste.

Ownership of the parcels that included Buildings 9007, 9011, 9037, and 9097 was transferred from the Army to Township of Wall in March 2009. Buildings 9011, 9023, and 9097 are currently being used by the InfoAge Museum.

A visual inspection of Buildings 9007, 9011, 9037 and 9097 was conducted. The location of the former Building 9007 is vacant; undeveloped; and covered with broken asphalt, stone, and some grassy areas. There are 1-inch cobble rows to the east and south in an arrangement that appears to be the former building outline. Stormwater on the western side of the former building drains toward and beneath the fence in the north. One stick-up monitoring well was identified to the west, near Building 9092. Buildings 9011 and 9037 are currently being used as warehouses. Building 9097 is a sheet metal building on an elevated pad. The building is currently used for material storage, and the exterior consists of asphalt on the southern and western sides. No stormwater features were observed in the vicinity of Buildings 9011, 9037, and 9097.

Table 5-12. AOPi CSM Information Profile – Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/ description	Building 9007 has been removed, and the area is now covered with broken asphalt, stone, some grassy areas. Buildings 9011 and 9037 are one-story rectangular brick structures. Both buildings are built on concrete underlain by soil. Building 9097 is a one-story rectangular sheet metal structure built on an elevated pad. The exterior ground surface is asphalt or concrete with areas of mowed grass and bushes. Surface water flows to the northeast toward the Shark River.
	Latitude, longitude	40.185102, -74.060772
	Size	8.47 acres

Table 5-12. AOPI CSM Information Profile – Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities (Continued)

Profile Type	Information Needs	Preliminary Assessment Findings
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical metal plating operations at Buildings 9007 (EA-3/AREE 3/ FTMM-35), 9011, 9037, and 9097 (EA-6). The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents. Evidence of PFAS release from AOPI could also indicate contamination of other evaluated areas (see Table 5-1).
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Buildings 9007, 9011, 9037, and 9097 metal and electroplating facilities. Although groundwater use is restricted at this site, groundwater in this area generally flows toward the Shark River and has the potential to influence on-post water supply wells and off-post domestic and water supply wells immediately downgradient. Therefore, a complete groundwater exposure pathway potentially exists for on-post and off-post human receptors.

5.2.12 Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area AOPI Rationale and CSM

The Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area were identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to reported AFFF storage and use. Buildings 9031 and 9634 are being considered a single AOPI due to their proximity and similar use.

The Building 9031 Fire Station, located on Monmouth Boulevard, was constructed in 1942/1943 (InfoAge 2000) and operated as a fire station until the closure of the EA in 1993. According to personnel interviews, AFFF was stored on fire trucks within the Building 9301 Fire Station. The former Battalion Chief also indicated that fire training with AFFF was conducted in front of Building 9301. The Building 9634 Firefighting/Spill Response Storage Area was located west of the Building 9301 Fire Station (InfoAge 2000), with documented use occurring in 1993 (Earth Tech 1994). Ownership of the parcel that included Buildings 9031 and 9634 was transferred from the Army to Township of Wall in March 2009. The Building 9031 Fire Station is currently undergoing preservation by the Southern Monmouth County Fire Museum Association and is being used for vehicle and equipment storage.

A visual inspection of Buildings 9031 and 9634 was conducted. The Building 9031 Fire Station consists of two bays that face east. The bay doors are fronted by a concrete ramp surrounded by asphalt that extends along the northern and western sides of Building 9031. Mowed grass is present to the south. Concrete floors are present inside the building, with no visible floor drains. A sewer cleanout or UST fill port was observed in the asphalt on the eastern side of Building 9031. Building 9634 is a single-story structure located west of Building 9031 and surrounded by mowed grass. Surface runoff flows to the north toward the mowed grass and fence line along Monmouth Boulevard. No stormwater features are immediately adjacent to Buildings 9031 and 9634; however, storm drains are present along Monmouth Boulevard and discharge to Laurel Gully Brook, which runs along the roadway to the north.

Table 5-13. AOPI CSM Information Profile – Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/ description	Building 9031 is a one-story T-shaped wood frame structure on concrete underlain by soil. The building has been gutted to the studs and is in the process of being restored for use as a museum (MFM 2023). Building 9634 is a one-story rectangular structure of unknown construction and foundation material. The exterior ground surface is a combination of asphalt, concrete, and areas of mowed grass. Surface water flows to the north toward Monmouth Boulevard.
	Latitude, longitude	40.185667, -74.061476
	Size	0.61 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/ release mechanisms	The primary release mechanism is the potential release of AFFF to surface soils related to historical operations at the Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area. The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at the Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area. Although groundwater use is restricted at this site, groundwater in this area generally flows toward the Shark River and has the potential to influence on-post water supply wells and off-post domestic and water supply wells immediately downgradient. Therefore, a complete groundwater exposure pathway potentially exists for on-post and off-post human receptors.

5.2.13 Surface Dump 1 (EA-13A/AREE 13) AOPI Rationale and CSM

Surface Dump 1 (EA-13A/AREE 13) was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance due to potentially receiving PFAS-impacted waste from metal plating operations. Given the period of operation, PFAS-containing mist suppressants were likely used during metal plating activities and present within the metal plating waste stream.

Surface Dump 1 is located at the intersection of Monmouth Boulevard and Watson Avenue, west of the Gate 3 parking area. Surface Dump 1 was used for open dumping from the 1940s (Earth Tech 1994) until at least the 1970s based on an analysis of aerial photographs of the site. A liquid containing pit of unknown origin was identified in a 1953 aerial photograph, and a historical field survey indicated that surface debris was scattered across the site, including construction rubble, telephone poles, small oil containers, and other domestic waste (Earth Tech 1994). According to past Fort Monmouth employees, Surface Dump 1 may have also been used for the disposal of metal plating waste and batteries. A few building foundations and an antenna footing also were observed at the site (Earth Tech 1996). An unnamed stream ran along the northwestern boundary of Surface Dump 1 and joined with Laurel Gully Brook approximately 100 feet north of the estimated northern boundary of the dump. Ownership of Surface Dump 1 transferred from the Army to Township of Wall in June 2003.

A visual inspection of Surface Dump 1 was conducted. The location of Surface Dump 1 is vacant and undeveloped. Approximately half of the area is wooded with low-density undergrowth and the other half consists of open grass adjacent to an asphalt parking lot. Several trails were noted running through the wooded portion of the site. Steep slopes are present within the wooded area, and surface runoff flows north toward a dry stream bed that leads east to Laurel Gully Brook and a well house located at the intersection of Washington and Watson Avenues.

Table 5-14. AOPi CSM Information Profile – Surface Dump 1 (EA-13A/AREE 13)

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/description	Undeveloped area covered by a mixture of steep wooded landscape, grass, and asphalt parking lot. Surface water flows to the north toward a dry stream bed and Laurel Gully Brook.
	Latitude, longitude	40.185372, -74.060983
	Size	2.05 acres
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	The primary release mechanism is the potential release of PFAS-containing materials to surface soils related to historical disposal of wastes from metal plating operations at Surface Dump 1 (EA-13A/AREE 13). The secondary contaminant migration and fate and transport considerations include downward contaminant migration from surface soil to deeper subsurface soil and groundwater via desorption, dissolution, and percolation. Constituents could migrate to surface water due to runoff, dissolution, and adsorption to suspended sediment from stormwater. Interaction and potential connectivity between surface water and groundwater (i.e., discharge and recharge) present another potential migration pathway of constituents.
	Exposure pathways, media, and human receptors	Soil is considered a complete exposure pathway at Surface Dump 1. Although groundwater use is restricted at this site, groundwater in this area generally flows toward the Shark River and has the potential to influence on-post water supply wells and off-post domestic and water supply wells immediately downgradient. Therefore, a complete groundwater exposure pathway potentially exists for on-post and off-post human receptors.

5.3 DATA LIMITATIONS

The data limitations relevant to the development of this PA for PFAS at Fort Monmouth are discussed below.

A comprehensive well survey was not completed as part of this PA; therefore, the information reviewed regarding off-post wells is limited to an administrative search that resulted in numerous wells that could not be verified. The EDR well search report (Appendix F) and online databases (NJDEP DataMiner 2023, NJ-GeoWeb 2023) were referenced when identifying potential off-post drinking water receptors.

The searches for ecological receptors and off-post PFAS sources not exhaustive and were limited to readily identifiable and available information evaluated during the relevant documents research, Army personnel interviews, and site reconnaissance. An online database was referenced when identifying the ecological profile for the site (USFWS 2023).

Records reviewed during the PA process were limited in information regarding PFAS-containing materials, including AFFF use, procurement records, and firefighter training records. Generally, interviews were crucial to understanding past practices and identifying the potential for use, storage, or disposal of

PFAS-containing materials because records are often not available after installation closure. Interviews providing information regarding potential PFAS-containing material use were limited in quantity but inclusive of personnel knowledgeable of fire, emergency response, and industrial activities over the time frame from 1978 to the present.

The PA was conducted through observation of operational periods, site usage, aerial photographs, records reviews, anecdotal evidence, and personnel interviews to evaluate the use, storage, or disposal of PFAS-containing materials. Therefore, some conclusions and recommendations presented in this report are based on available information, professional judgment, and industry best practices.

6. CONCLUSIONS

This PA was conducted in accordance with DoD, Army, and USEPA guidance documents. Programmatically, the Army has focused its PFAS PA efforts on identifying locations where a potential for a release of PFAS exists (i.e., those locations where PFAS-containing materials were used, stored, or disposed of). Locations on Army installations with the greatest likelihood of releases of PFAS were evaluated as part of this PA, including FTAs, AFFF storage locations, aircraft crash sites, fuel farms, and sites associated with aviation assets. However, other potential sources of PFAS at the installation were considered and have been documented in this PA. A combination of document review, Internet searches, interviews with installation personnel, and an installation site visit were used to identify specific areas of suspected PFAS use and releases at Fort Monmouth.

The entire former Fort Monmouth installation was assessed; 41 preliminary areas (17 at the MP, 16 at the CWA, and 8 at the EA) were identified and evaluated for potential use, storage, and/or disposal of PFAS-containing materials; and these areas were further refined during the PA process and then either identified either as an area not retained for further investigation or as an AOPI. In accordance with the established process for the PA, 12 areas (3 at the MP, 5 at the CWA, and 4 at the EA) of the preliminary areas have been identified as AOPIs.

The AOPIs identified during this this PA at Fort Monmouth are listed below according to the operational area with which they are associated:

- Main Post
 - Building 282 Fire Station
 - MP Sanitary Treatment Plant (FTMM-19/AOC-3)
 - Building 699 Parking Lot Fuel Spill
- Charles Wood Area
 - Building 2536 Fire Station and Building 2542 AFFF Storage
 - Building 2560 Fire Station
 - Building 2629 Fire Training Facility, Building 2628 Storage Area, and Spill/Burn Simulation Pads
 - Building 2700 Myer Center Facility and Wastewater Treatment Lime Pits (CW-1/FTMM-22 and CW-2/FTMM-23)
 - CWA STP (CW-5/FTMM-27)
- Evans Area
 - EA STP (EA-1/AREE 1)
 - Buildings 9007 (EA-3/AREE 3/FTMM-35), 9011, 9037, and 9097 (EA-6) Metal and Electroplating Facilities
 - Building 9031 Fire Station and Building 9634 Firefighting/Spill Response Storage Area
 - Surface Dump 1 (EA-13A/AREE 13).

A site-specific CSM was developed for each AOPI based on an assessment of the potentially contaminated media, migration routes, site characteristics, and existing records. The CSMs developed for this PA identified that on-post and off-post drinking water receptors exist that could be potentially impacted by AOPIs at Fort Monmouth.

Given the findings of this PA, including data received from third-party testing results, the AOPIs presented warrant further evaluation, and it is the recommendation of this PA, in accordance with the NCP (40 CFR §300.420(b)(4)(iii)), that further action is required. Per the Army 2018 guidance, the sites identified will proceed to the RI phase under the NCP (40 CFR §300.430(d)). Based on third-party testing, PFAS groundwater results are above the OSD SLs.

APPENDIX A

FINAL FORT MONMOUTH KICKOFF MEETING MINUTES

**PRELIMINARY ASSESSMENT/SITE INSPECTIONS (PA/SIs) OF PFAS
AT FORT MONMOUTH, NEW JERSEY
INSTALLATION KICKOFF MEETING MINUTES**

Date/Time: 29 March 2023/12:00 to 1:00 p.m. EST

Location: Virtual Meeting via Webex

Attendees:

Army BRAC Environmental Program

Erin Mauer – BRAC Program Manager

Tom Lineer – BRAC Installation Manager

Heather Elliot – BRAC Environmental Coordinator

USACE

Pete Phillips – Project Manager, Baltimore District

Cliff Opdyke – Risk Assessor/Quality Manager, Baltimore District

Leidos Team

Vasu Peterson – Project Manager

Samantha Stenson – Deputy Project Manager

Sarika Johnson – PA Team Lead/Project Engineer

Tim Runkle – Project Geologist

Lindsey Moyer – Monmouth PA Lead

Riley Hicks – PA Team Support

1. Introductions

- a. Vasu Peterson (Leidos) opens the meeting with a welcome and provides an overview of the agenda.
- b. Vasu introduces BRAC and USACE personnel and the Leidos team, along with their respective roles on the Fort Monmouth project.

2. PFAS Sources at Army Installations

- a. Sarika Johnson (Leidos) presents the four primary sources of PFAS identified at Army Installations as well as other minor sources. She further summarizes typical areas of potential interest for AFFF and other PFAS sources.

3. PA Process Overview – Desktop Research and Site Visit Approach

- a. Sarika summarizes the PA process and notes that desktop PA research will be conducted to evaluate the site history and characteristics, AFFF use/storage/disposal, and other PFAS-containing materials used at Fort Monmouth. All available materials will be collected and reviewed, including the online administrative record; environmental database resources; and any additional documents, permits, plans, photographs, and maps.
- b. A facility PFAS Questionnaire will be provided to the Army to obtain input from knowledgeable personnel, and responses will help inform the site visit.
- c. The site visit includes review of onsite documentation, visual inspection, interviews with key personnel, and confirmation of desktop review material. Furthermore, information gathered during the site visit will be used to provide an understanding of firefighting and emergency response

practices, historical operations, chemicals stored and/or used onsite, and waste management and safety practices.

4. Site History Overview

- a. Lindsey Moyer (Leidos) presents an overview of the site history for Fort Monmouth.
- b. Fort Monmouth covered 1,346 acres in three separate areas: The Main Post, Charles Wood Area, and Evans Area. The Main Post consisted of approximately 637 acres, Charles Wood Area consisted of approximately 489 acres, and Evans Area consisted of approximately 220 acres.
- c. The primary mission was to provide command, administrative, and logistical support for the U.S. Army Communications and Electronics Command (CECOM) Headquarters.
- d. Camp Little Silver was opened in 1917 as a training site for officers, and then was renamed Camp Vail. The Signal Corps School relocated to Camp Vail in 1919.
- e. In 1925, the Main Post was granted permanent status as an Army Post and was renamed Fort Monmouth. The Main Post provided administration, training, housing, and community facilities.
- f. Additional property was purchased in 1941 that included Charles Wood Area and Evans Area.
 - i. Charles Wood Area was primarily used for research and development, testing, and housing.
 - ii. Evans Area was primarily used for research and development and testing of electronics equipment.
- g. Fort Monmouth was realigned by BRAC three times: 1) in 1988, the Army relocated the Information Systems Command (ISC); 2) in 1991, the Electronic Technology Device Laboratory was relocated; and 3) in 1993, the Chaplain school was relocated.
- h. In 1993, Evans Area was recommended for closure under BRAC.
 - i. Property conveyance at Evans Area occurred between 2003 and 2013; recipients of the parcels included Township of Wall, Brookdale Community College, New Jersey Department of Transportation, and Jersey Central Power and Light.
- i. The Main Post and Charles Wood Area were recommended for closure by BRAC in 2005 and were officially closed in 2011. In 2012, the Army and Fort Monmouth Economic Revitalization Authority (FMERA) agreed to a conveyance plan that included two phases. Phase I parcels consisted of both the Main Post and Charles Wood Area (561.5 acres). Phase II was the remainder of the Main Post (563.7 acres).
 - i. As of 2020, 8.6 acres from Phase I were to be transferred in 2022 and 76.5 acres from Phase II were to be transferred in 2021 and 2022.
 - ii. Vasu states that the above property transfer information was taken from a 2020 legacy report and requests the current status of property transfers. Tom Lineer (BRAC) confirms that changes have occurred and offers to provide updated information. Vasu suggests that property deeds would be useful. Tom responds that Robert Dow and Robert DeMeyer have copies of the deeds and offers to put Leidos in contact with them via email.

5. Facility Overview

- a. Lindsey provides an overview of the Fort Monmouth facility. Three non-contiguous parcels encompass Fort Monmouth located in Monmouth County, New Jersey. The Main Post and Charles Wood Area are a half mile apart, and Evans Area is approximately 10 miles south of the Main Post. The former facility spans three communities: Tinton Falls, Eatontown, and Oceanport. The surrounding land use is residential, commercial, recreational, open-space, and light industrial.
- b. The installation location map is presented with the three areas that comprise Fort Monmouth. Vasu highlights logistical challenges regarding access and considerations for distance between parcels.
- c. Lindsey continues providing the facility overview. There are no on-post drinking water wells, and water is supplied by New Jersey-American Water or the Township.
 - i. Drinking water for the Main Post and Charles Wood Area is supplied by New Jersey-American. Water via surface water sources is processed at two large facilities: the Swimming River Reservoir and Treatment Plant and the Jumping Brook Treatment Plant.

- ii. Evans Area drinking water is supplied by Wall Township. Water is drawn from eight drinking water supply wells at the Manasquan Reservoir. Three of the supply wells are located in the Imperial Park Plant, adjacent to the Evans Area.
- d. Lindsey asks about three wells (i.e., Imperial Park Wells #1-3) allegedly located in the Evans Area.
 - i. Heather Elliot (BRAC) states that a 5-year review has been recently completed onsite but is unaware of these wells and will ask Joe Pearson (Former BEC).
 - ii. Vasu confirms that Leidos will send Heather a follow-up email.
- e. Lindsey presents historical potable well information for the facility, including a historical drinking water well in the Charles Wood Area along Tinton Avenue in the 1940s (abandoned) and five supply wells thought to be potable in the Evans Area (two abandoned, three not found).
- f. Vasu discusses the need for understanding facility-specific drinking water wells as well as nearby water wells. Leidos has experience with the Jersey Well Database and will generate a search radius for existing groundwater wells in the area given the extent of the former facility.
- g. Vasu presents the areas currently identified for evaluation in the PFAS PA based on the initial records review and research, including Fire Stations/Equipment Storage/Training; Photo Processing Buildings/Waste Areas; Metal Plating Facilities/Waste Areas; Landfills/Dumps/Burn Area; Wastewater/Sanitary Treatment Plants; Chemical/Hazardous Waste Storage; Pesticide Storage/Mixing; Wash Rack; 1980s Fire at Building 283; Fuel Storage/Distribution; Airfield/Helicopter Pad; and Other Maintenance Areas (machine, woodworking, paint, automotive).

6. Records Review

- a. Vasu provides the objectives and status of the records review. Leidos has obtained reports from the Fort Monmouth online administrative record and preliminary list of Evans Area documents. She notes that Leidos will be requesting additional documents for the Evans Area. Heather indicates she has documents available electronically and will send these documents.
- b. Vasu asks if GIS data or CAD data exists.
 - i. Heather states she has a folder of CDs from Joe Pearson and asks for this request to be sent in a follow-up email. Vasu states that an email with all requests (e.g., documents and GIS files) will be conveyed.

7. Site Logistics – Discussion Topics

- a. Vasu summarizes site logistics, including current site conditions, installation/building access, security requirements, working hours, access agreement(s), escort requirements/availability, impacts to and interaction with property users, and requirements/restrictions on equipment.
- b. Vasu asks Tom if he has any current site condition information to provide (e.g., security, hour restrictions). Tom indicates Leidos would need to reach out to FMERA to coordinate a site visit, as they are a majority property owner. The Army still owns approximately 80 acres. Joseph Fallon is the chief of the environmental division at FMERA, and he used to be the Environmental Coordinator at Fort Monmouth.
- c. Heather agrees with Tom and offers guidance for gaining access in coordination with the current property owners; however, she will need to determine with whom to coordinate for the Evans Area. Heather stated she has a contact who could provide insight to the water infrastructure on post. Heather has a call on Wednesday with FMERA and suggests Leidos attend for introductions. In addition, Christopher Gallo (USACE New York District) joins the call and would be a good resource to question. In addition, Tom offers to initiate communication between Leidos and Christopher. Vasu concurs and requests Heather send a meeting invite.

8. Preliminary Schedule

- a. Vasu presents the preliminary schedule of the deliverables and task with the anticipated 3-day site visit being conducted in April 2023, followed by a PA Results Meeting in May 2023 and a Draft PA Report in June 2023.

- b. Vasu states that the next steps include continuing PA Research, providing a PFAS PA Questionnaire in advance of the site visit for distribution to appropriate personnel, identifying contact information and arranging for site access, and initiating contact with identified interview candidates.

9. Open Questions and Discussion

- a. Tom states that an email conversation has been initiated with Leidos and Christopher. In addition, Rob Dow (BRAC) provided current parcel and acreage summaries for Fort Monmouth. Regarding future parcel transfers, Tom and Heather will have to review the projections and provide feedback.

APPENDIX B

DOCUMENTS/SOURCES REVIEWED DURING PA

Document Title	Author	Date	Relevance
<i>An Archeological Overview and Management Plan for Fort Monmouth (Main Post), Camp Charles Wood and the Evans Area</i>	Envirosphere Company	October 1984	Background information
<i>Environmental Assessment for the USASATCOMA Facility</i>	U.S. Army	July 1989	Background information, land use

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

APPENDIX E

QUESTIONNAIRE RESPONSES AND INTERVIEW NOTES

Interview Form for Former Firefighter, Fort Monmouth Fire Department

Facility	Fort Monmouth	
Title	Firefighter, Fort Monmouth Fire Department	
Position/Duties at this facility	Firefighter	Years of experience at this facility and date range 1994-2010

1. Were there onsite fire training activities?

Not when he was there.

2. Where are the fire training areas?

Charles Wood area around 1999/2000, they had a training center did not use a foam. He doesn't recall using foam during any fire training events.

3. How were fires responded to?

No fire on post during his time with the fire department.

4. Is AFFF used in fire suppression systems in any of the buildings?

Unknown

5. Do you know of any AFFF storage areas, uses, or releases?

Foam was used to flush pumps/cleaning the tank on the apparatus; some may have gotten on the ground, but he didn't recall where this was done.

6. Were there chrome plating operations?

Unknown

7. Were there any WWTPs or landfills onsite?

Unknown

8. What industrial operations were present onsite?

Unknown

9. What were the standard disposal practices of chemicals used onsite?

Unknown

Notes:

Foam trailer had an incident, the pump on the trailer spilled about 5 gallons of foam. The trailer was a military style water buffalo converted to a foam trailer. It was originally built, and modifications done on the Main Post. The foam trailer was stored near the training ground; filled trailer with 5-gallon pails, did it in the front of the main station. Pails were stored in a warehouse at the training site. He did not recall where the spill occurred.

The Charles Wood fire station burnt down, and then completely knocked down, where the old building was a new building was constructed. He did not remember the location of the building.

The last that he heard, all or a majority of the logbooks were sent to Picatinny Arsenal, and they got thrown away.

Did not have any information on the Evans Area.

Interview Form for Environmental Program Manager, BEC

Facility	Fort Monmouth		
Title	Environmental Program Manager, BEC		
Position/Duties at this facility	BEC, Lab Manager / Director, Environmental Protection Specialist, SSE	Years of experience at this facility and date range	1992-2015 (23 years)

1. Were there onsite fire training activities?

2. Where are the fire training areas?
Fire training area was in the Charles Wood Area.

3. How were fires responded to?
The Fire Department responded to off-post fires; there was a mutual aid agreement for off-post fires and the department would help fight fires within the community.

4. Is AFFF used in fire suppression systems in any of the buildings?

5. Do you know of any AFFF storage areas, uses, or releases?
They had mobile trailers with 5-gallon pails of AFFF; Fire Department would hook it up and pull it behind the fire trucks. They had the trailers with AFFF at the Main Post; the trailers were stored next to the Main Post Fire Department parking area.

Major fire of transformer of Oil at the Evans Area; unsure if they used AFFF or not.

6. Were there chrome plating operations?

7. Were there any WWTPs or landfills onsite?

8. What industrial operations were present onsite?

9. What were the standard disposal practices of chemicals used onsite?

Notes:
Drainage at Evans Area and Charles Wood Area is poor; at Charles Wood Area, the fire training area was located on a hill and had streams below.

The Fire Department has a logbook. It should still reside in the firehouse at Evans Area, at the mail post. Should have records of where AFFF was sprayed.

The Evans Area fire station was not as advanced. The Main Post would come down with AFFF; unsure if they had any stored onsite.

Fort Monmouth Fire Department had an active website, and the town had their own newspaper.

The limestone vaults were concrete and very well constructed. When samples were collected for analysis, they drilled down next to them to the stone layer, laid wire, and put in the Geoprobe; did not find any contaminants.

All his laboratory records were organized and stored in a building in an area above the flood level.

Other people to contact: Chief [REDACTED] (would likely answer questions) and [REDACTED] (unlikely he would answer questions).

BRAC PFAS PA Questionnaire for Army

PRELIMINARY ASSESSMENT QUESTIONNAIRE

Facility	Fort Monmouth	
Name of Individual Completing the Questionnaire	[REDACTED]	
Title	Environmental Program Manager	
Position/Duties at this facility	BEC, Lab Manager/Director, Enviro Protection Specialist, SSE	Years and dates of experience at this facility 1992-2015

1. Is aqueous film-forming foam (AFFF) currently being used or has it previously been used at this facility?

Yes No

If no, please skip to Question 10.

a. If AFFF is/has been used onsite, when and where is/was it used?

I observed it in storage at the Fire House and confirmed with other Environmental and Fire Department personnel.

b. What type of AFFF is/has been used at locations within this facility (i.e., 3%, 6%, high- expansion foam)? What manufacturers' AFFF products are/were used at locations within this facility? Please attach copies of the manufacturer's SDS or product information sheet for the AFFF, if available.

Don't know

c. Is AFFF currently stored at locations within this facility? If so, where?

Don't know

d. If AFFF is/was stored onsite, is/was it stored as a mixed solution or is/was it formulated onsite?

Concentrate and mixed with fire equipment

e. If AFFF is/was stored onsite, what is/was the volume of the storage tanks/containers? What is the total volume of AFFF typically onsite at any given time?

I recall approx. 5 gal totes

f. If AFFF is/was formulated onsite, where is/was it mixed, contained, and transferred? How is the AFFF transferred (e.g., via underground piping)?

Used during firefighting operations

g. How is/was AFFF applied? i.e. portable extinguisher, overhead system, truck-mounted system, other?

Mobile equipment

h. Are AFFF fire extinguishers used onsite? If yes, what size and where are they located?

Yes No ***Don't know, never inventoried.***

i. If an overhead deluge system is/was present, was the system activated manually or automatically?

Don't know

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

<p>j. Please provide information about frequency maintenance/inspection of the deluge system.</p>
<p>2. Did the facility ever dispose of, or are there records of disposal of, old bulk AFFF at this facility? Yes <input type="checkbox"/> No <input type="checkbox"/></p> <p>If yes, when was the disposal and where was the disposal or historical records? Please provide copies of disposal documentation, if available.</p> <p><i>At the time I was there, the AFFF was not inventoried; managed as haz mat or disposed of as a regulated material.</i></p>
<p>3. Do the fire suppression systems currently contain AFFF or have they been retrofitted for use of high-expansion foam or water? Yes <input type="checkbox"/> No <input type="checkbox"/></p> <p>a. If retrofitted, when?</p> <p>b. Please provide a list of (building name/number, current or demolished) where the fire suppression systems currently contain or formerly contained AFFF?</p> <p>c. What is the testing procedure for the fire suppression systems? Please include frequency and testing methods? Is AFFF used during testing? Provide copies of testing records, if available.</p> <p>d. When was the last time the system was tested?</p> <p>e. Is/was AFFF ever released accidentally or intentionally during testing of the system? If yes, please provide dates, quantities, and location of the release.</p>
<p>4. Does an inventory exist of the amount of AFFF stored at this facility, currently and in the past? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p> <p>a. If yes, please provide copies of available inventory records.</p> <p>b. Where is/was the AFFF stored? <i>Main firehouse, outside trailer as I recall</i></p> <p>c. Did any of the storage locations have a history of leaking AFFF? <i>Don't know</i></p>
<p>5. Is/was AFFF carried/stored in vehicles? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p> <p>a. How much AFFF is/was carried/stored in each specified vehicles?</p>

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

- b. Do you know if vehicle spray tests were performed to make sure equipment was properly working? If yes, how often were spray tests performed, and can you provide the location of these tests?

Don't know

- c. What is/was the procedure on how vehicles and systems are/were supplied with AFFF?

Don't know

- d. Is/was there a specified area at this facility where vehicles are/were filled with AFFF, and does/did this location have secondary containment in case of spills?

6. If a release of AFFF occurs/occurred, how is/was the release cleaned and disposed of?

Release would have been at a fire or training event. Not regulated at time.

7. Is there an AFFF collection system to collect and store AFFF discharged during an emergency such as a deluge tank and floor drain system?

Don't know

8. Are there any other locations where AFFF has been potentially stored, released, or used (e.g., hangars, buildings, fire stations, firefighting equipment testing and maintenance areas, emergency response sites, storm water/surface water, wastewater treatment plants, AFFF ponds)?

Yes No

- a. Where are/were these locations?

Warehouse for receiving; fire houses and vehicle storage areas

- b. What are the years of active use of AFFF for each of these other potential locations at which AFFF may have been used?

Need to check with firehouse

9. Do you have anecdotes/recollection and/or records of the following? Please provide details on any "yes" responses.

Yes No a. Fuel spills and emergency response logs? Please provide logs, if available.

Fire department kept logs. I asked firemen, now working at Lakehurst, and they concurred

Yes No b. AFFF being used as a precaution in response to fuel releases to prevent fires? If yes, please provide dates, locations, and volume of AFFF released.

Don't know

Yes No c. Historical emergency response sites (e.g., fires) where AFFF was used? If yes, please provide dates, locations and volume of AFFF released.

Look for log, interview fire department and DPW managers

Yes No d. Accidental release of AFFF from a fire suppression system, AFFF storage tank/container, or pump and piping? If yes, please provide dates, locations, and volume of AFFF released.

Don't know

Yes No e. Is there a crash response crew on site? If so, does/did the response crew use

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

<p>AFFF? Have any crash responses occurred at the facility? If so, when and was AFFF used?</p> <p style="text-align: center;"><i>Yes, speak with FD personnel</i></p>	
<p>10. What is/was the typical procedure for removing dispensed AFFF from an area where it had been used? Were retention ponds built to store discharged AFFF? Was AFFF allowed to trickle to a sanitary sewer or was it left in ponds to infiltrate?</p> <p style="text-align: center;"><i>None, nonregulated</i></p>	
<p>11. How many fire training areas are located at this facility (active and/or inactive)?</p> <p>a. For inactive/former fire training areas, during what timeframe was the fire training area(s) in active use?</p> <p>b. What types of fuels/flammables were used at the fire training areas?</p> <p>c. Was AFFF used during training exercises?</p> <p>Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p>	<div style="border: 1px solid black; height: 20px; width: 100%;"></div>
<p>d. Where are/were the fire training areas located?</p> <p style="text-align: center;"><i>See SI reports, interview fire dept personnel Main Post, Charles Wood, Evans Area</i></p>	
<p>12. What is the nearest fire station that responds to emergencies at the facility?</p> <p style="text-align: center;"><i>On site, but there was mutual aid agreements with local communities</i></p> <p>a. Does the fire station use AFFF in their trucks and/or equipment?</p> <p>Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p> <p>b. Has the fire department ever discharged AFFF at your facility? If yes, please provide dates and details of the event.</p> <p>Yes <input type="checkbox"/> No <input type="checkbox"/></p>	
<p>13. Are there any wells at the facility? This would include potable water wells, landscaping wells, monitoring wells, injection wells, dry wells, geothermal wells, etc.</p> <p>Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p> <p>If yes, please provide information on the location, depth, status and usage of each well.</p> <p style="text-align: center;"><i>You have this info</i></p>	
<p>14. Has a chrome plating shop ever operated at this facility?</p> <p>Yes <input checked="" type="checkbox"/> No <input type="checkbox"/></p> <p>a. What are/were the years of operation at the chrome plating shop?</p> <p style="text-align: center;"><i>See Evans Area and MP SI reports</i></p> <p>b. Does the shop have/had a foam blanket mist suppression system or use/used a fume hood for emission control?</p> <p style="text-align: center;"><i>Do not think so, old facilities</i></p>	

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

<p>c. If a foam blanket mist suppression was used, where was the foam stored, mixed, and applied?</p>
<p>15. Did wire manufacturing ever occur at this facility (specifically wire coating and insulation)? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, at which buildings and during what timeframe?</p>
<p>16. Were any processes or operations conducted that would have used or produced industrial surfactants, resins, molds, plastics (e.g., manufacture of plastics, fluoropolymers, rubber, and compression mold release coatings and/or plumbing flux agents, fluoroplastic coatings, composite resins, and flame retardant for polycarbonate)? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, at which location and during what timeframe?</p>
<p>17. Are you aware of any other activities or processes that may have utilized PFAS-containing materials? Are there any chemical storage areas on the property? For example, storage areas for pesticides or paint? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, what activities and where are/were these located?</p>
<p><i>Labs may have used the products.</i></p>
<p>18. Are any former or current wastewater treatment plants onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, do you know the location of where sludge was deposited? <i>Charles Wood, see SI</i> If yes, what wastewater sources are/were treated and which buildings at the facility are/were connected to the treatment plant? a. Are there any former or current septic systems onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, where are/were they located? Which buildings are/were connected to the septic system? If no longer being used, when was the septic system taken out of service? <i>See SI</i></p>
<p>19. Are any former or current landfills or dumps located at this facility? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, at which location and what was the timeframe of use? <i>See SI</i> What types of materials are/were disposed of in the landfill or dump? <i>Everything</i></p>
<p>20. Are any wetlands/storm water basins at the facility that may have collected water contaminated with AFFF or from other per- and polyfluoroalkyl substances (PFAS) sources? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, where are these located? <i>Likely from fires</i></p>

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

21. Are/were there any laundry or dry-cleaning facilities onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, where are these located? <i>Class 6 building</i>
22. Are/were there any vehicle washing facilities onsite? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, where are these located? <i>Gas station with detailing</i>
23. Are/were there any aircraft washing facilities onsite? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, where are these located?
24. Are you aware of any other activities or processes that may have utilized PFAS-containing materials? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, what activities and where are/were these located? <i>Don't know</i>
25. Is there anyone else that you recommend to be interviewed? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, please provide contact information for these individuals. <i>Fire department and DPW personnel. Employed at Picatinny, Lakehurst, Earle, retired, get logbooks for fire responses</i>

Interview Form for FMERA, Senior Environmental Officer

Facility	Fort Monmouth	
Title	FMERA, Senior Environmental Officer	
Position/Duties at this facility	Former Chief, Environmental Division, U.S. Army Garrison	Years of experience at this facility and date range 35 years

1. Were there onsite fire training activities?
2. Where are the fire training areas?
3. How were fires responded to?
4. Is AFFF used in fire suppression systems in any of the buildings?
5. Do you know of any AFFF storage areas, uses, or releases?
6. Were there chrome plating operations?
7. Were there any WWTPs or landfills onsite?
8. What industrial operations were present onsite?
9. What were the standard disposal practices of chemicals used onsite?

Notes:

E-mail correspondence dated 5/2/2023:

A fire rendered the original fire station in the Charles Wood Area (Building 2536) as unusable. A new fire station (Building 2560) was built in the Charles Wood Area in 2001. Dating back to the original station, there was a garage (Building 2542) which was utilized by the fire department for storage. AFFF found in 5-gallon pails was stored inside Building 2542. The Army demolished Building 2542 and Building 2628 became their new storage facility. The land that housed Buildings 2536 and 2542 has since been sold to a third party.

Interview Form for Former Battalion Chief

Facility	Fort Monmouth		
Title	Battalion Chief, Fort Monmouth Fire Department		
Position/Duties at this facility	Battalion Chief, Firefighter	Years of experience at this facility and date range	1978/79- till closure

1. Were there onsite fire training activities?

Yes, in front of the fire houses. They trained with AFFF in front of all the stations.

2. Where are the fire training areas?

The training facility was at Charles Wood Area; there were no training location located off post. He stated they never used foam in the fire training building, however it was used on props outside the training building.

3. How were fires responded to?

Did not respond to fire on post.

4. Is AFFF used in fire suppression systems in any of the buildings?

Unknown

5. Do you know of any AFFF storage areas, uses, or releases?

AFFF was stored in Building 2542, and it was not stored in the old Fire Station (Building 2536) that was burnt down in the 1990s. Foam was not used when the fire station burned down. It was there since the 1940s.

6. Were there chrome plating operations?

Unknown

7. Were there any WWTPs or landfills onsite?

Unknown

8. What industrial operations were present onsite?

Unknown

9. What were the standard disposal practices of chemicals used onsite?

Unknown

Notes:

There was a foam trailer, that they used to refill, usually in front of the fire stations, or in front of the buildings where AFFF was stored. There was another building down by the fire training center that was used for AFFF storage. If they were off-post and it needed to be refilled, they would refill it.

All the trucks carried foam, did not need to calibrate they had meters, to see the use. Does not recall calibrating or doing any checks on-post.

Fort Monmouth was supplied by foam from various fire stations from Monmouth County. It was called a foam bank and 2 pails of foam would be donated to the Fort Monmouth Fire Department by various entities. Depending on where the foam was used, they would either pay for the foam that was used or donate more pails.

Never used foam in the fire training building, maybe on the props outside.

When the base was decommissioned, everything went to Picatinny Arsenal. The fire logs went there and was not sure about excess AFFF.

The Building 293 fire, no foam used at this fire.

Most of their calls were off post.

No major fires on post.

BRAC PFAS PA Questionnaire for Army

PRELIMINARY ASSESSMENT QUESTIONNAIRE

Facility	Fort Monmouth, NJ	
Name of Individual Completing the Questionnaire	[REDACTED]	
Title	FMERA, Senior Environmental Officer	
Position/Duties at this facility	Former Chief, Environmental Division, U.S. Army Garrison	Years and dates of experience at this facility 35

1. Is aqueous film-forming foam (AFFF) currently being used or has it previously been used at this facility?

Yes No

If no, please skip to Question 10.

a. If AFFF is/has been used onsite, when and where is/was it used?

At the former firefighting training facility located in the Charles Wood Area of Fort Monmouth, NJ.

b. What type of AFFF is/has been used at locations within this facility (i.e., 3%, 6%, high- expansion foam)? What manufacturers' AFFF products are/were used at locations within this facility? Please attach copies of the manufacturer's SDS or product information sheet for the AFFF, if available.

Not sure. I suggest you speak with some of the former firefighters that worked at Fort Monmouth. See continuation sheet.

c. Is AFFF currently stored at locations within this facility? If so, where?

Not to my knowledge.

d. If AFFF is/was stored onsite, is/was it stored as a mixed solution or is/was it formulated onsite?

It was stored in five (5) gallon pails in concentrate.

e. If AFFF is/was stored onsite, what is/was the volume of the storage tanks/containers? What is the total volume of AFFF typically onsite at any given time?

It was stored in five (5) gallon pails in concentrate.

f. If AFFF is/was formulated onsite, where is/was it mixed, contained, and transferred? How is the AFFF transferred (e.g., via underground piping)?

Five (5) gallon pails of AFFF were stored on trailers that could be towed by emergency vehicles.

g. How is/was AFFF applied? i.e. portable extinguisher, overhead system, truck-mounted system, other?

Firefighting vehicles/equipment.

h. Are AFFF fire extinguishers used onsite? If yes, what size and where are they located?

Yes No

i. If an overhead deluge system is/was present, was the system activated manually or automatically?

I am not aware of any deluge systems that utilized AFFF.

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

j. Please provide information about frequency maintenance/inspection of the deluge system.

Not applicable.

2. Did the facility ever dispose of, or are there records of disposal of, old bulk AFFF at this facility?

Yes No

If yes, when was the disposal and where was the disposal or historical records? Please provide copies of disposal documentation, if available.

I don't recall the fire department turning in AFFF for disposal.

3. Do the fire suppression systems currently contain AFFF or have they been retrofitted for use of high-expansion foam or water?

Yes No

a. If retrofitted, when?

b. Please provide a list of (building name/number, current or demolished) where the fire suppression systems currently contain or formerly contained AFFF?

c. What is the testing procedure for the fire suppression systems? Please include frequency and testing methods? Is AFFF used during testing? Provide copies of testing records, if available.

d. When was the last time the system was tested?

e. Is/was AFFF ever released accidentally or intentionally during testing of the system? If yes, please provide dates, quantities, and location of the release.

4. Does an inventory exist of the amount of AFFF stored at this facility, currently and in the past?

Yes No

a. If yes, please provide copies of available inventory records.

b. Where is/was the AFFF stored?

c. Did any of the storage locations have a history of leaking AFFF?

5. Is/was AFFF carried/stored in vehicles?

Yes No

a. How much AFFF is/was carried/stored in each specified vehicle?

As previously stated, the fire department stored five (5) gallon containers of AFFF on trailers which could be towed by emergency vehicles.

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

- b. Do you know if vehicle spray tests were performed to make sure equipment was properly working? If yes, how often were spray tests performed, and can you provide the location of these tests?

I suggest you contact some of the former firefighters that worked at the fort.

- c. What is/was the procedure on how vehicles and systems are/were supplied with AFFF?

I suggest you contact some of the former firefighters that worked at the fort.

- d. Is/was there a specified area at this facility where vehicles are/were filled with AFFF, and does/did this location have secondary containment in case of spills?

I suggest you contact some of the former firefighters that worked at the fort.

6. If a release of AFFF occurs/occurred, how is/was the release cleaned and disposed of?

AFFF was used by fire department personnel at the former firefighting training facility as part of their training mission.

7. Is there an AFFF collection system to collect and store AFFF discharged during an emergency such as a deluge tank and floor drain system?

No

8. Are there any other locations where AFFF has been potentially stored, released, or used (e.g., hangars, buildings, fire stations, firefighting equipment testing and maintenance areas, emergency response sites, storm water/surface water, wastewater treatment plants, AFFF ponds)?

Yes No

- a. Where are/were these locations?

Buildings 282, 2542, and 2560. See continuation sheet.

- b. What are the years of active use of AFFF for each of these other potential locations at which AFFF may have been used?

Operations at the former firefighting training facility commenced in the 1990s and ended on September 15, 2011 (date of post closure).

9. Do you have anecdotes/recollection and/or records of the following? Please provide details on any "yes" responses.

Yes No a. Fuel spills and emergency response logs? Please provide logs, if available.

There were numerous fuel spills at the fort over the years. The former DPW Environmental Office maintained spill records dating from 1989 through 2014.

Yes No b. AFFF being used as a precaution in response to fuel releases to prevent fires? If yes, please provide dates, locations, and volume of AFFF released.

I recall AFFF being used by the fire department for a gasoline spill near the former AFFES Main Post Gas Station (1990s).

Yes No c. Historical emergency response sites (e.g., fires) where AFFF was used? If yes, please provide dates, locations and volume of AFFF released.

Please refer to Army spill records for the fort.

Yes No d. Accidental release of AFFF from a fire suppression system, AFFF storage tank/container, or pump and piping? If yes, please provide dates, locations, and volume of AFFF

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

released.

Yes No e. Is there a crash response crew on site? If so, does/did the response crew use AFFF? Have any crash responses occurred at the facility? If so, when and was AFFF used?

The Fort Monmouth Fire Department maintained a well-trained hazardous materials response team.

10. What is/was the typical procedure for removing dispensed AFFF from an area where it had been used? Were retention ponds built to store discharged AFFF? Was AFFF allowed to trickle to a sanitary sewer or was it left in ponds to infiltrate?

I am not aware of any procedures.

11. How many fire training areas are located at this facility (active and/or inactive)?

One

a. For inactive/former fire training areas, during what timeframe was the fire training area(s) in active use?

1990s through 2011. I cannot speak to other operations that predate 1988.

b. What types of fuels/flammables were used at the fire training areas?

I suggest you consult with former fire department employees.

c. Was AFFF used during training exercises?

Yes No

d. Where are/were the fire training areas located?

The former firefighting training center located in the Charles Wood Area of Fort Monmouth.

12. What is the nearest fire station that responds to emergencies at the facility?

I am not aware of any fires at the Charles Wood Area between September 15, 2011 and the present date.

a. Does the fire station use AFFF in their trucks and/or equipment?

Yes No

b. Has the fire department ever discharged AFFF at your facility? If yes, please provide dates and details of the event.

Yes No

I am not aware of any fires at the Charles Wood Area between September 15, 2011 and the present date..

13. Are there any wells at the facility? This would include potable water wells, landscaping wells, monitoring wells, injection wells, dry wells, geothermal wells, etc.

Yes No

If yes, please provide information on the location, depth, status and usage of each well.

The U.S. Army maintains a map that depicts the monitoring wells located at the Charles Wood Area.

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

<p>14. Has a chrome plating shop ever operated at this facility? Yes <input type="checkbox"/> No <input type="checkbox"/></p> <p>a. What are/were the years of operation at the chrome plating shop? <i>Please reference the Phase I Environmental Condition of Property (ECP) Report prepared by Shaw Environmental in January of 2007.</i></p> <p>b. Does the shop have/had a foam blanket mist suppression system or use/used a fume hood for emission control? <i>Reference comment under paragraph "a".</i></p>
<p>c. If a foam blanket mist suppression was used, where was the foam stored, mixed, and applied? <i>Reference comment under paragraph "a".</i></p>
<p>15. Did wire manufacturing ever occur at this facility (specifically wire coating and insulation)? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, at which buildings and during what timeframe? <i>I am not aware of any.</i></p>
<p>16. Were any processes or operations conducted that would have used or produced industrial surfactants, resins, molds, plastics (e.g., manufacture of plastics, fluoropolymers, rubber, and compression mold release coatings and/or plumbing flux agents, fluoroplastic coatings, composite resins, and flame retardant for polycarbonate)? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, at which location and during what timeframe? <i>The fort's maintenance shops were located in the 400 Area. Please reference the findings listed in the Phase I ECP Report.</i></p>
<p>17. Are you aware of any other activities or processes that may have utilized PFAS-containing materials? Are there any chemical storage areas on the property? For example, storage areas for pesticides or paint? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, what activities and where are/were these located? There were pesticide storage and mixing operations at the golf course and on the Main Post. Paint was stored at building 280 which is located on the Main Post. Paint was also stored, mixed, and applied at building 2506. The golf course has since been sold.</p>
<p>18. Are any former or current wastewater treatment plants onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, do you know the location of where sludge was deposited? <i>The U.S. Army did operate their own wastewater treatment plants prior to connecting to the Two Rivers Water Reclamation Authority's (former the Northeast Monmouth County Regional Sewage Authority) wastewater treatment plant in 1975. The Army operated one (1) wastewater treatment plant in the Charles Wood Area and two (2) plants on the Main Post.</i> If yes, what wastewater sources are/were treated and which buildings at the facility are/were connected to the treatment plant? <i>Please reference Army sewer maps for the Main Post and Charles Wood Area.</i></p> <p>a. Are there any former or current septic systems onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, where are/were they located? Which buildings are/were connected to the septic system? If no longer being used, when was the septic system taken out of service?</p>

PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

Please reference the Phase I Environmental Condition of Property (ECP) Report prepared by Shaw Environmental in January of 2007.

19. Are any former or current landfills or dumps located at this facility?

Yes No If yes, at which location and what was the timeframe of use?

I would refer you to the Phase I Environmental Condition of Property (ECP) Report prepared by Shaw Environmental in January of 2007.

What types of materials are/were disposed of in the landfill or dump?

Please reference the Phase I Environmental Condition of Property (ECP) Report prepared by Shaw Environmental in January of 2007.

20. Are any wetlands/storm water basins at the facility that may have collected water contaminated with AFFF or from other per- and polyfluoroalkyl substances (PFAS) sources?

Yes No If yes, where are these located?

A stormwater basin is located next to building 2628.

21. Are/were there any laundry or dry-cleaning facilities onsite?

Yes No If yes, where are these located?

Former Dry-Cleaning Facility: ECP Parcel 96, IRP Site FTMM-68

22. Are/were there any vehicle washing facilities onsite?

Yes No If yes, where are these located?

There were several: buildings 108, 166, 750 & 1124.

23. Are/were there any aircraft washing facilities onsite?

Yes No If yes, where are these located?

24. Are you aware of any other activities or processes that may have utilized PFAS-containing materials?

Yes No If yes, what activities and where are/were these located?

25. Is there anyone else that you recommend to be interviewed?

Yes No If yes, please provide contact information for these individuals.

Former fire department personnel.

Continuation Sheet:

Question 1b: Chief [REDACTED] (retired), phone number attached, [REDACTED] (retired, former Training Officer), [REDACTED] (former Training Officer/last reported working at Naval Weapons Station Earle, Colts Neck, NJ), and [REDACTED] (last reported working at Picatinny Arsenal, NJ).

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: A review of the NPL list, as provided by EDR, and dated 01/25/2023 has revealed that there is 1 NPL site within approximately 2 miles of the target property.

UTM X (Meters):	578391.8
UTM Y (Meters):	4461101.5
State Plane X (Feet):	609928.8
State Plane Y (Feet):	533977.6
Elevation:	39 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14327252 LONG BRANCH WEST, NJ
Version Date:	2019
West Map:	14327254 MARLBORO, NJ
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

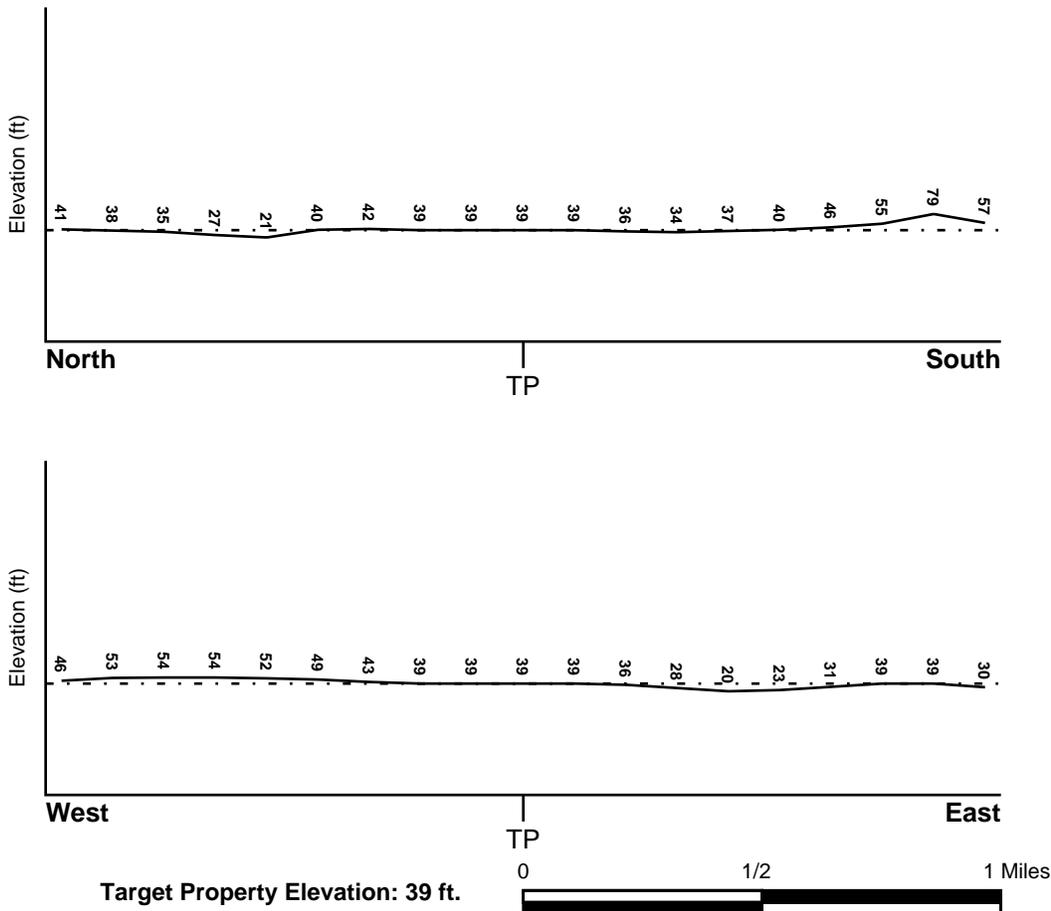

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

34025C0191F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LONG BRANCH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SSW
Site Name:	Metallurgical Ind
Site EPA ID Number:	NJD980770598
Groundwater Flow Direction:	E TOWARD WAMPUM BROOK.
Measured Depth to Water:	less than 25 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial and lower aquifers.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

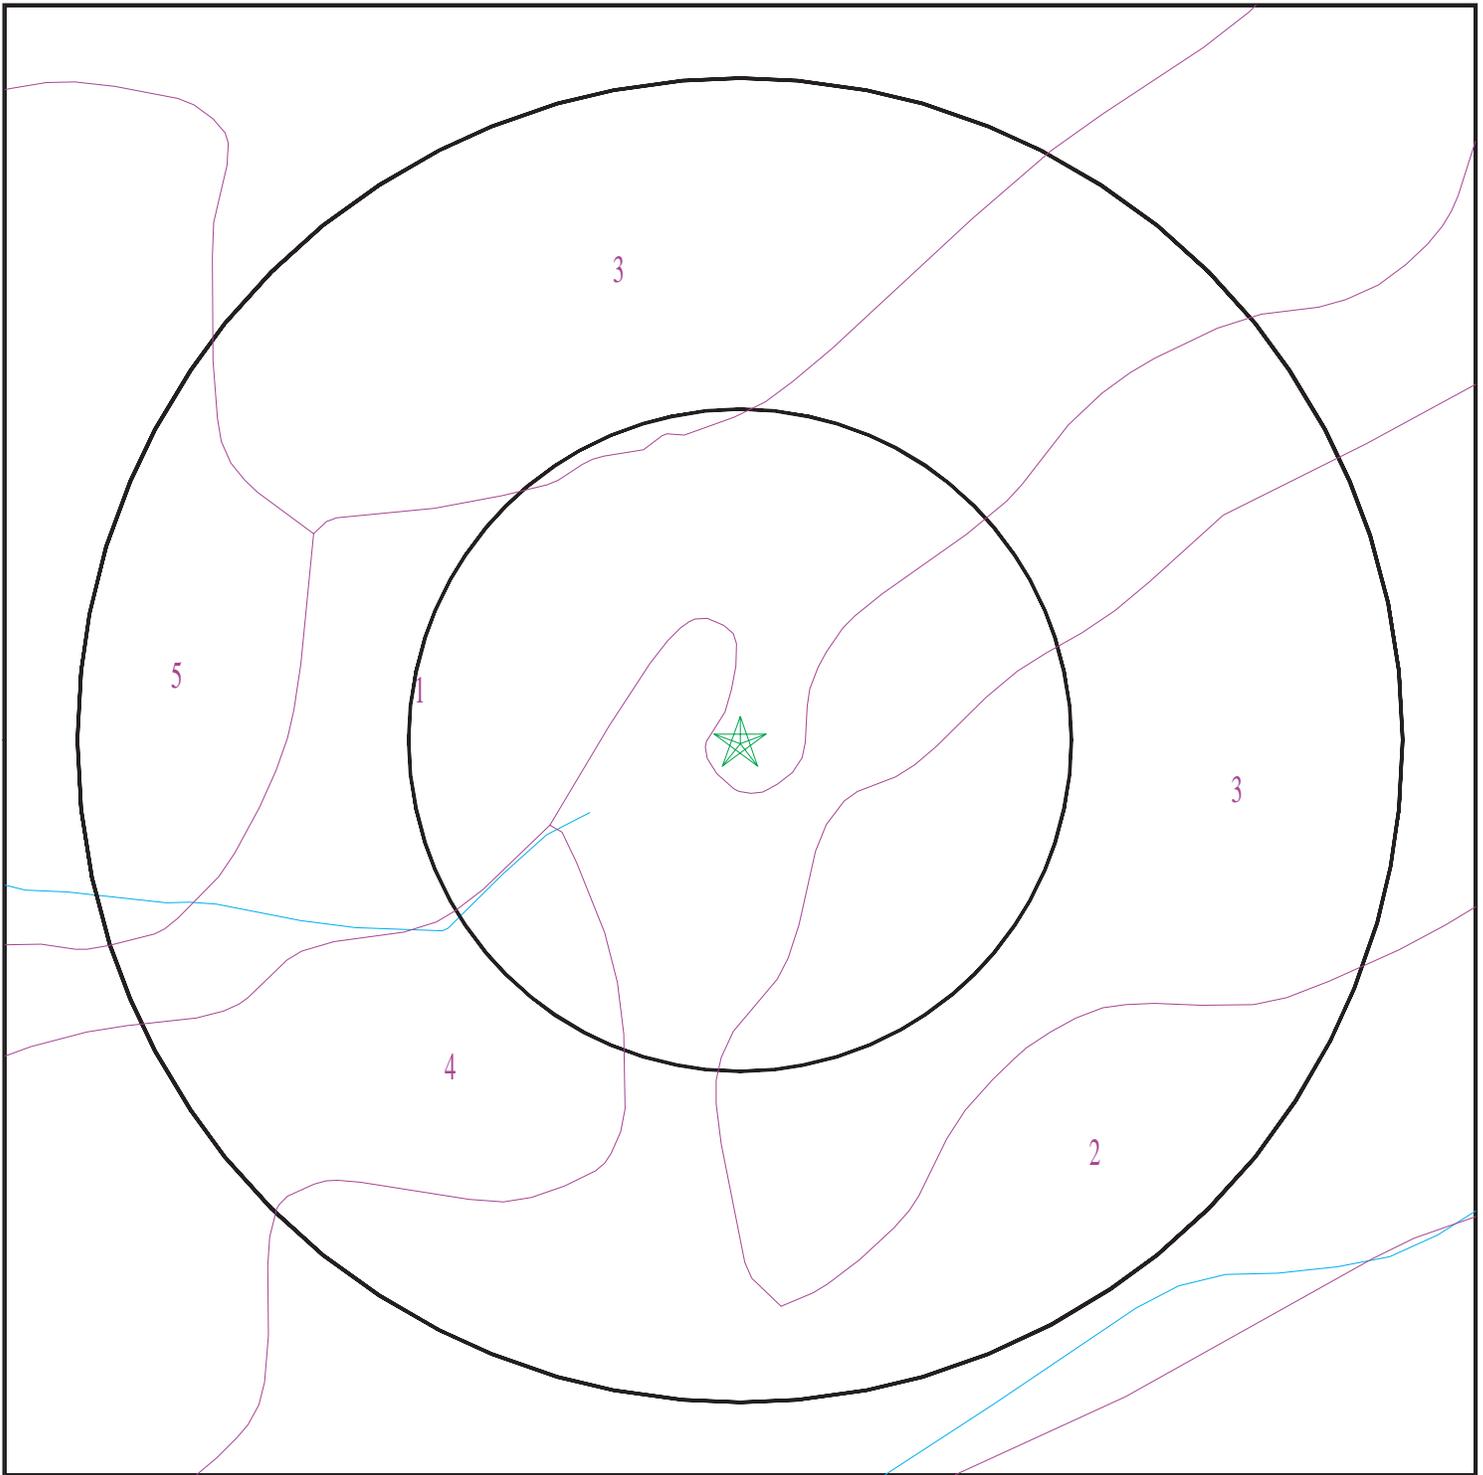

Era:	Cenozoic
System:	Tertiary

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Holmdel

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 4.5
2	20 inches	37 inches	sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 4.5
3	42 inches	59 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
4	11 inches	20 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 4.5
5	37 inches	42 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 4.5

Soil Map ID: 2

Soil Component Name: Shrewsbury

Soil Surface Texture: sandy loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be drained and classified.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	7 inches	11 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6
3	11 inches	20 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6
4	20 inches	29 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6
5	29 inches	42 inches	stratified loamy sand to sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6
6	42 inches	59 inches	stratified loamy sand to sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141.14 Min: 14.11	Max: 5.5 Min: 3.6

Soil Map ID: 3

Soil Component Name: Freehold

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Department of Environmental Protection

Telephone: 609-984-2243

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New Jersey Public-Community Water-Supply Wells

Source: Department of Environmental Protection, Geological Survey

Telephone: 609-984-6587

New Jersey Ambient Ground Water Quality Network Data

Source: Department of Environmental Quality

Telephone: 609-984-6587

Ambient Groundwater Quality of the New Jersey Part of the Newark Basin. Natural groundwater quality in the Newark Basin summarize natural groundwater quality in sedimentary bedrock formations of the Newark basin part of the Piedmont physiographic province of New Jersey.

STORET Water Quality Monitoring Stations

Source: Department of Environmental Protection

Telephone: 609-984-6831

STORET maintains the locations of water quality monitoring stations from NJDEP's NJ STORET (Modernized) database.

A station is a location at which a data collection event takes place, such a collection of a field sample, measurement of field parameters or evaluation of environmental habitats.

Water Well Permit Information

Source: Department of Environmental Protection

Telephone: 609-984-6831

Permits to drill wells. Once constructed, the driller must submit a well record document with the as-built description of the well. Drillers also submit a well abandonment report whenever a well has been decommissioned.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

<u>Site</u>	<u>Database(s)</u>	<u>EPA ID</u>
2201 MARCONI RD 2201 MARCONI RD WALL TWP, NJ 07719	NJ Release	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: A review of the SEMS list, as provided by EDR, and dated 01/25/2023 has revealed that there is 1 SEMS site within approximately 2 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>EAST COAST ICE</i> Site ID: 0203928 EPA Id: NJD986570034	<i>80 STEINER AVE</i>	<i>ENE 1 - 2 (1.905 mi.)</i>	<i>KH2136</i>	<i>484</i>

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2023 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 2 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

EVANS AREA
2201 MARCONI ROAD
BELMAR, NJ 07719

TARGET PROPERTY COORDINATES

Latitude (North):	40.186717 - 40° 11' 12.18"
Longitude (West):	74.059506 - 74° 3' 34.22"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	580063.9
UTM Y (Meters):	4448695.0
State Plane X (Feet):	615186.2
State Plane Y (Feet):	493233.2
Elevation:	61 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14317777 ASBURY PARK, NJ
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

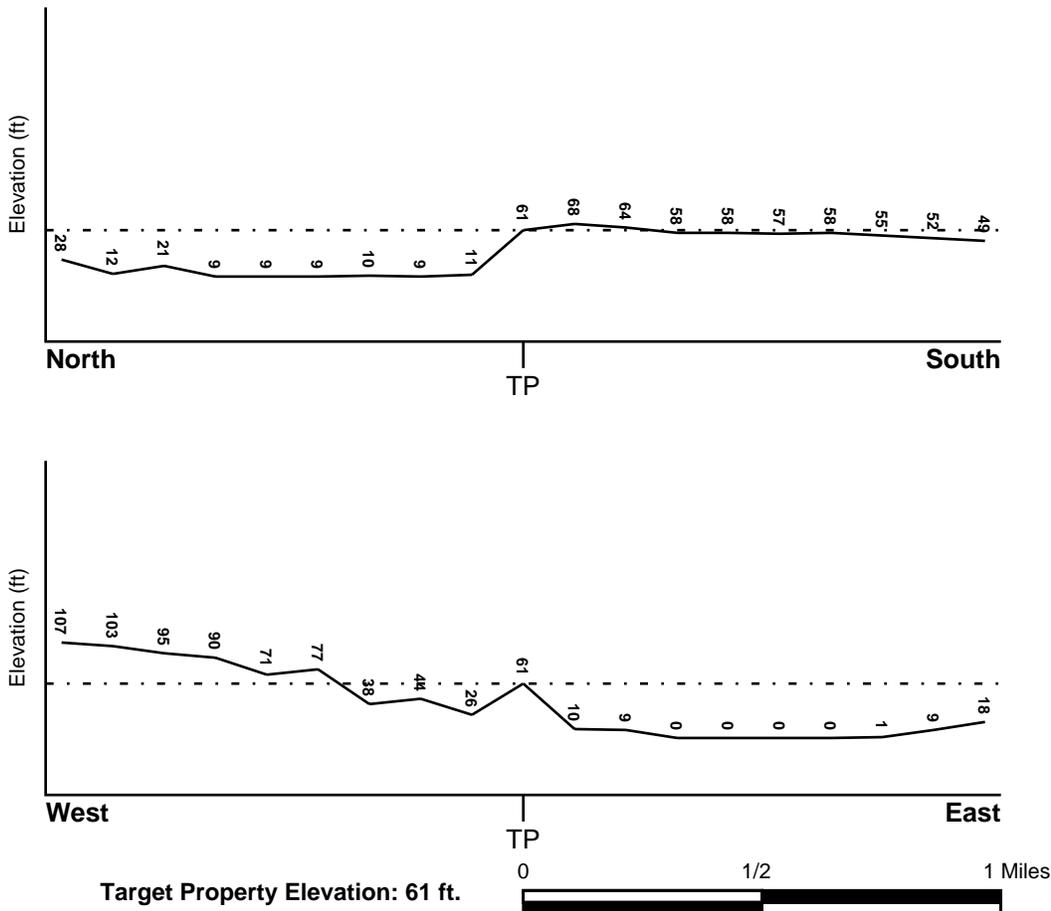

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
34025C0341F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ASBURY PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

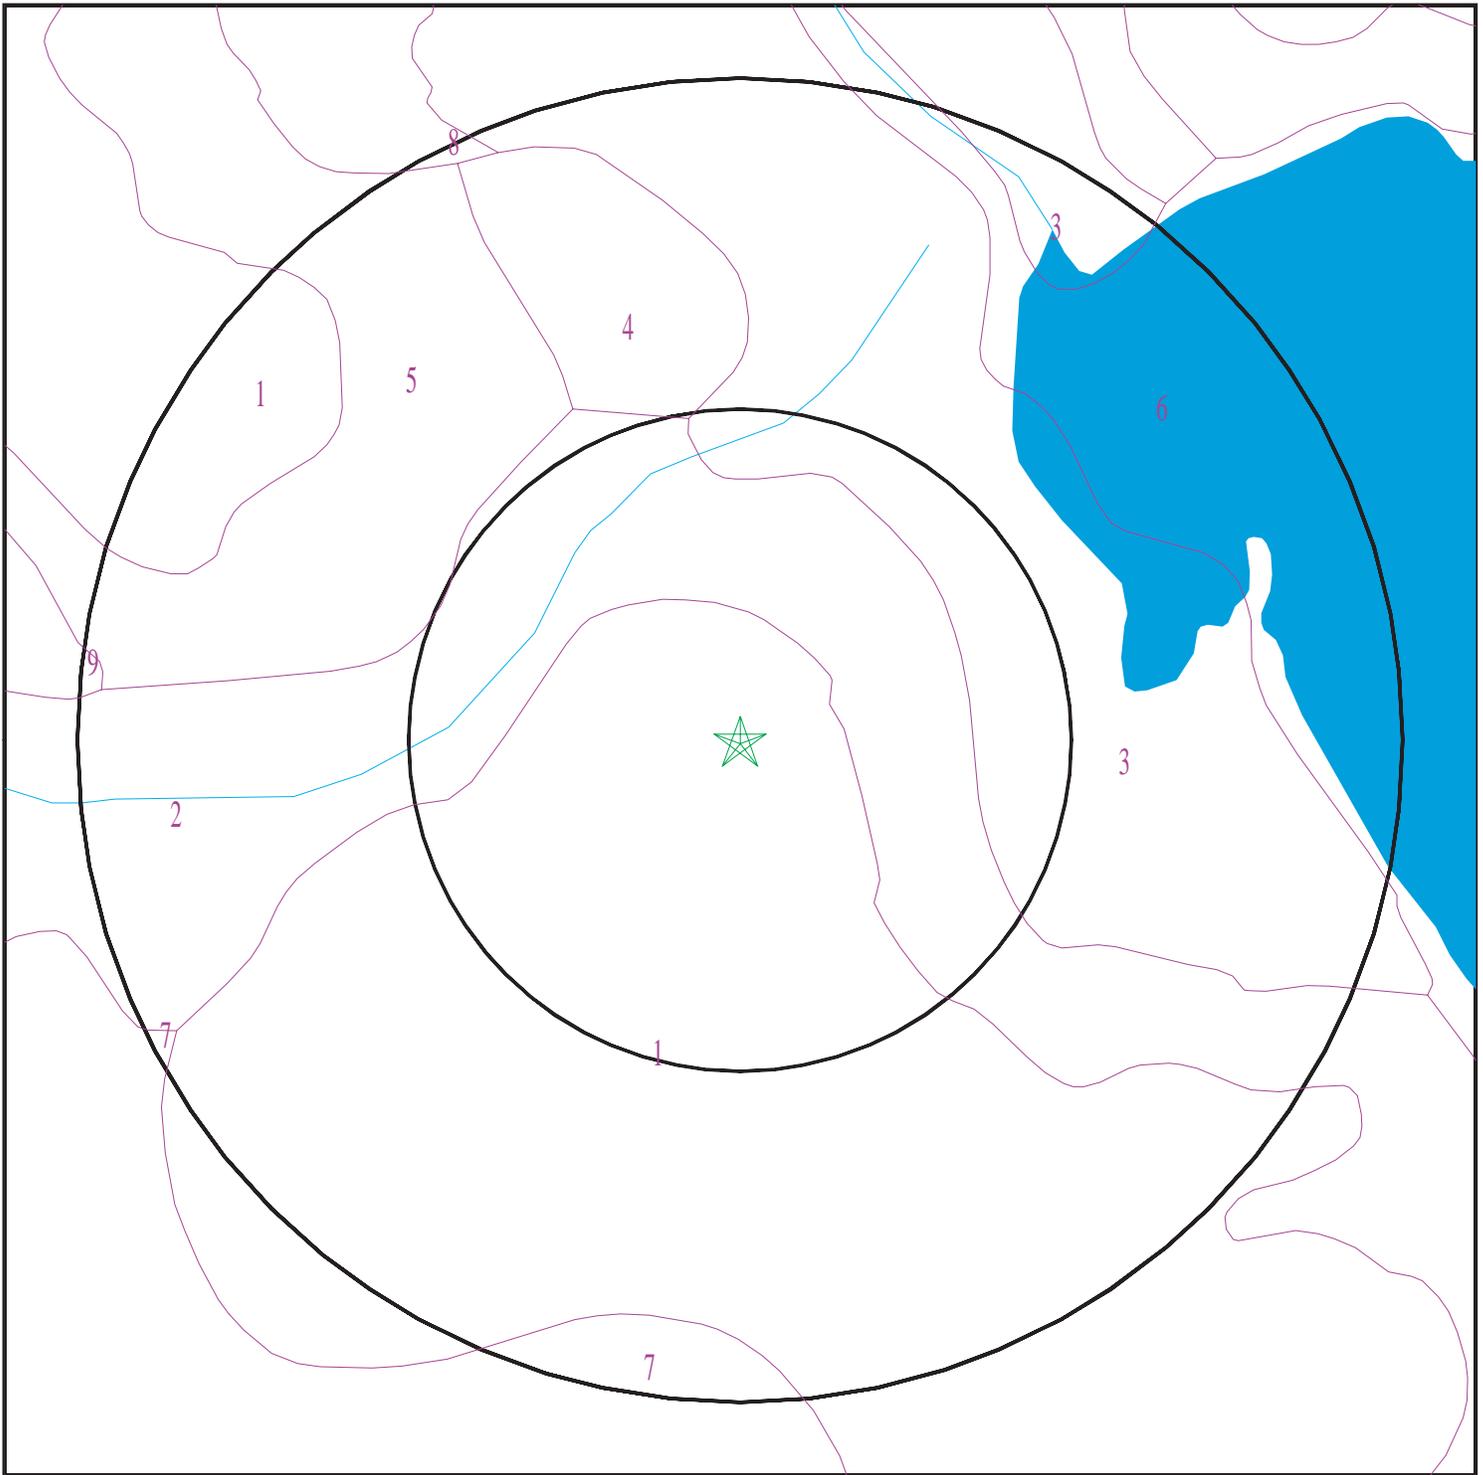

Era:	Cenozoic
System:	Tertiary
Series:	Eocene
Code:	Te (<i>decoded above as Era, System & Series</i>)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Evesboro

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
2	3 inches	16 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
3	16 inches	31 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

Soil Map ID: 3

Soil Component Name: Appoquinimink

Soil Surface Texture: mucky silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	mucky silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Highly organic soils, Peat.	Max: 42 Min: 14	Max: 7.3 Min: 5.6

2	3 inches	16 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
3	16 inches	31 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
4	31 inches	79 inches	stratified loamy sand to sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6

Soil Map ID: 5

Soil Component Name: Evesboro

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 183 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
2	5 inches	27 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6
3	27 inches	59 inches	stratified loamy sand to sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 14.11	Max: 5 Min: 3.6

Soil Map ID: 6

Soil Component Name: Water

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 7

Soil Component Name: Freehold

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 609-984-2243

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New Jersey Public-Community Water-Supply Wells

Source: Department of Environmental Protection, Geological Survey

Telephone: 609-984-6587

New Jersey Ambient Ground Water Quality Network Data

Source: Department of Environmental Quality

Telephone: 609-984-6587

Ambient Groundwater Quality of the New Jersey Part of the Newark Basin. Natural groundwater quality in the Newark Basin summarize natural groundwater quality in sedimentary bedrock formations of the Newark basin part of the Piedmont physiographic province of New Jersey.

STORET Water Quality Monitoring Stations

Source: Department of Environmental Protection

Telephone: 609-984-6831

STORET maintains the locations of water quality monitoring stations from NJDEP's NJ STORET (Modernized) database.

A station is a location at which a data collection event takes place, such a collection of a field sample, measurement of field parameters or evaluation of environmental habitats.

Water Well Permit Information

Source: Department of Environmental Protection

Telephone: 609-984-6831

Permits to drill wells. Once constructed, the driller must submit a well record document with the as-built description of the well. Drillers also submit a well abandonment report whenever a well has been decommissioned.

OTHER STATE DATABASE INFORMATION

RADON

State Database: NJ Radon

Source: Department of Environmental Protection

Telephone: 609-984-5425

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leidos Engineering, LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Leidos Engineering, LLC (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.
