1.0 INTRODUCTION

This report presents the results for the annual (fourth quarter) 2015 groundwater sampling event performed at 12 sites within Fort Monmouth (FTMM) by Parsons Government Services, Inc. (Parsons) to support the Remedial Investigation (RI), Feasibility Study (FS), and Decision Documents project at FTMM, Oceanport, Monmouth County, New Jersey.

The work was conducted under the Worldwide Environmental Restoration Services (WERS) contract number W912DY-09-D-0062 of the United States Army Engineering & Support Center, Huntsville (USAESCH).

The activities discussed within this report were conducted in accordance with:

- New Jersey Department of Environmental Protection (NJDEP) Technical Requirements for Site Remediation (TRSR) (N.J.A.C. 7:26E); and
- New Jersey Field Sampling Procedures Manual (FSPM) (February 2006).

1.1 PURPOSE AND SCOPE

Groundwater sampling was conducted between September 30, 2015 and December 15, 2015. The sampling program implemented is consistent with the recommendations for quarterly/annual sampling made in the August 2013 Baseline Groundwater Sampling Report (Parsons, 2014), and accepted by the NJDEP in a letter dated February 5, 2015. Additional recommendations were made in the Annual (Fourth Quarter) 2014 Groundwater Sampling Report (Parsons, 2015), and accepted by the NJDEP in a letter dated January 26, 2015. Analytical results for the samples collected in 2015 were also used to evaluate the FTMM long-term groundwater sampling program and the potential for removal of monitoring wells or analytes in comparison to historical groundwater concentrations.

1.2 REPORT ORGANIZATION

This Annual (Fourth Quarter) 2015 Groundwater Sampling Report includes the following sections:

- Section 1 provides an introduction and organization to the report;
- Section 2 presents general information on the annual (fourth quarter) 2015 groundwater sampling event, a description of any significant deviations or events that may have impacted results, and the usability of laboratory analytical data;
- Section 3 provides the applicable remedial standards;
- Section 4 summarizes the findings and recommendations for the FTMM groundwater sampling program sites;
- Section 5 presents the references used in preparation of this report;
- Appendices A through L provide historical groundwater analytical results, annual 2015 groundwater analytical results, and the findings and recommendations for each site;
- Appendix M provides a memorandum regarding data validation for the 2015 annual sampling event;

- Appendix N provides the laboratory analytical reports, which are included as a CD; and
- Appendix O provides relevant communication with the NJDEP regarding groundwater sampling at the FTMM for 2015.

2.0 GROUNDWATER SAMPLING PROGRAM

2.1 INTRODUCTION

Work performed as part of the FTMM groundwater sampling program was conducted as outlined in the project's Sampling and Analysis Plan (SAP) (Parsons, 2013), and Health and Safety Plan (HASP) (Parsons, 2013). The groundwater sampling event involved depth-to-water level measurements and collection of groundwater samples from 47 monitoring wells. The monitoring wells are located at 12 sites within two areas of FTMM, the Main Post (MP) and Charles Wood Area (CWA). **Table 1** presents the site name, location area, number of wells on the site and number of wells sampled. (Table 1 also includes sites where the NJDEP agreed with the recommendation to discontinue groundwater sampling.) Prior to groundwater sampling activities, a site reconnaissance was performed to locate each monitoring well and assess its condition and accessibility. The location of FTMM and the 12 sites discussed within this report are provided on **Figure 1.1**, **Figure 1.2**, **and Figure 1.3**.

Further details regarding groundwater sampling activities and results for each individual site can be found in **Appendices A through L**.

2.1.1 Water Level Measurements

Between September 30 and December 14, 2015, depth-to-water measurements were collected from site monitoring wells prior to initiating sampling activities. Levels were obtained with an oil water interface probe from the top of the inner casing of the well. The water level probe was decontaminated in accordance with the SAP. Water level measurements were used to calculate the groundwater elevations, and confirm the previously determined groundwater flow direction. Groundwater contour figures for the 12 sites discussed within this report are provided in **Appendices A through L**.

2.1.2 Monitoring Well Assessment

During depth-to-water measurement in the monitoring wells, the condition of each monitoring well was assessed. Wells were visually inspected for physical damage, obstructions, or the presence of pump tubing in the well casing. The depth to the bottom of each monitoring well was also gauged and compared to the installed depth in order to determine if there was sediment build up in the well. The condition of the monitoring wells at each of the 12 FTMM sites is presented in Section 1.0 of the individual **Appendices A through L** for each FTMM site**.**

2.1.3 Groundwater Sampling

Groundwater samples were collected from 47 monitoring wells between September 30 and December 14 of 2015 using either low-flow purging and sampling (LFPS) or passive diffusion bag (PDB) sampling methodology. NJDEP approved the use of PDB sampling in a letter dated July 29, 2013 at FTMM-22 and FTMM-68, and at that time FTMM-53 was not approved for PBDs because of the historical presence of methyl tert-butyl ether (MTBE) in groundwater. However, the August 2013 baseline and first quarter 2014 groundwater sampling results demonstrated that MTBE was no longer present in the wells or detected at very low concentrations slightly above the detection limit on the site (FTMM-53). The NJDEP agreed that this site was deemed eligible for sampling using PDB (July 3, 2014 comment letter). PDBs were filled with laboratory-grade de-ionized water, deployed in monitoring wells and allowed to equilibrate for a minimum of two weeks prior to retrieving and collecting groundwater samples. Groundwater sampling activities

using PDBs were performed in accordance with the NJDEP FSPM (NJDEP, 2009) and the SAP. Vertical profiling of well screens for each fully saturated five foot interval was performed, where required, during the annual (fourth quarter) 2015 groundwater sampling event. If vertical profiling had previously been performed on a particular well, it was not repeated.

A groundwater sampling summary, including the Site name, well ID, analytical analysis, sampling method, and the sample date is presented in **Table 2**.

ALS Environmental of Rochester, NY (NJ cert. #NY004) served as the primary analytical laboratory for the 2015 annual (fourth quarter) groundwater sampling event. Samples were shipped on ice under chain of custody to ALS Environmental via FedEx. Accutest Laboratories (Accutest) of Dayton, NJ (NJ cert. #12129) served as the quality assurance (QA) laboratory. Five percent of groundwater samples collected were "split" and submitted to both ALS Environmental and Accutest consistent with the SAP. Both ALS Environmental and Accutest are Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) and National Environmental Laboratory Accreditation Program (NELAP) certified laboratories that follow the project specifications of the DOD Quality Systems Manual (QSM) Version 4.1 or the latest version.

Water generated during the groundwater sampling was passed through portable granular activated carbon buckets and discharged to the ground surface adjacent to the well sampled.

2.1.4 Changes to Groundwater Sampling Program

Long term groundwater monitoring was discontinued at sites FTMM-03 and FTMM-61 in 2015 based on the recommendations contained in the Annual (Fourth Quarter) Groundwater Sampling Report (Parsons, Dec 2015), which was approved by the NJDEP in their January 26, 2016 letter. The NJDEP also agreed (in the same letter) to temporarily suspend the long term monitoring (LTM) program at FTMM-59 and evaluate the groundwater results as part of the ongoing remedial investigation for the site.

FTMM began temporary suspension the LTM program for groundwater at FTMM-22, FTMM-53, and FTMM-68 in the first quarter of 2016. These sites are currently in the remedial investigation (RI) phase and the field work has been completed or will be completed in the near future. The collective RI data provides a good characterization of the concentrations of constituents in the groundwater and allows for the evaluation of the groundwater (as a whole) in the RI/FS process. The LTM of the groundwater to date has provided sufficient understanding of the groundwater chemistry for these sites, and there is minimal benefit to continuing the LTM program while characterization of these sites is being completed under the RI process. Once the RI Reports (RIR), any necessary feasibility studies (FSs), and proposed plans have been completed and a remedy has been selected under a decision document, a revised LTM program for the groundwater will be submitted for these sites as appropriate to support the CEA. The temporary suspension of the LTM program for these four sites was approved in the NJDEP letter dated March 16, 2016.

RI reports (RIRs) have been submitted to the NJDEP for the four landfills (FTMM-02, FTMM-05, FTMM-08 and FTMM-18) which are currently sampled under this LTM groundwater program. Future groundwater sampling for these landfills will be performed and reported to support Biennial Certifications of revised existing (FTMM-2) or future (FTMM-05, FTMM-08 and FTMM-18) Classification Exemption Areas (CEAs) since the RIRs for these landfills have been completed (future sampling and reporting under a CEA is consistent with N.J.A.C 7:26E-

4.3(a)7 and 7:26E-4.9 (a)7) and the CEA has been identified as the preferred remedy. An extensive groundwater sampling history has been esta blished as part of the LTM program implemented for each landfill, and a comprehensive review of the data was performed as part of each RI for these sites, therefore the sampling performed under the current LTM, which provided data to support the investigation of the site is no longer appropriate. The CEA will include a biennial sampling frequency for select wells for an appropriate set of compounds that are representative of recent groundwater conditions. The biennial sampling frequency will provide data for the biennial certifications. This annual report references the RIRs for consistency and states that the LTM programs for these sites will be modified following the approvals of the RIRs to the future CEA programs, with biennial sampling to be performed in the same year as the biennial CEA certification.

2.1.5 QA/QC Sampling

Quality Assurance/Quality Control (QA/QC) samples were collected in accordance with the NJDEP FSPM and the Quality Assurance Project Plan (QAPP), which is included as part of the SAP.

2.2 DEVIATIONS FROM QAPP AND SAP

Deviation from the SAP for this sampling event are summarized in **Table 3**. In general, there were no significant deviations that could have adversely affected the sampling procedures or the results of the groundwater sampling presented in this report.

2.3 USABILITY OF LABORATORY ANALYTICAL DATA

A Level IV validation was performed on analytical data collected during the annual (fourth quarter) 2015 groundwater sampling event. Per the project QAPP, the validation for long term monitoring data includes a minimum of one report per sampling event or 33% of the data throughout the project, whichever is less. The data submitted by the laboratory has been reviewed and validated as per the SAP and was found to be usable for the purposes of this project. The Data Validation and the Data Verification Summary Reports are provided in **Appendix M** and complete laboratory analytical reports for groundwater samples collected are provided in **Appendix N** (on CD). The data validation performed meets the substantive requirements of the NJDEP's *Analytical Laboratory Data Generation, Assessment, and Usability Technical Guidance* (April 2014).

3.0 APPLICABLE REMEDIAL STANDARDS

For FTMM, the applicable remediation standards for groundwater are the NJDEP GWQS for Class IIA waters and the United States Environmental Protection Agency (USEPA) Maximum Contaminant Levels (MCLs) for Chemical Contaminants at Superfund Sites for Tap Water.

Both the GWQS and the USEPA MCL are provided in historical and 2015 groundwater data tables for reference purposes. If a chemical compound has a GWQS then that standard is used and the USEPA MCLs are used for those compounds where a GWQS is not established.

In a July 3, 2014 comment letter, the NJDEP agreed that metals at FTMM-02, FTMM-04, FTMM-08 (with the exception of lead), FTMM-12 (with the exception of lead), FTMM-25, FTMM-54, FTMM-55, FTMM-67, and FTMM-64, are indicative of background conditions and therefore sampling for metals was discontinued for these sites. In this Annual (Fourth Quarter) 2015 Groundwater Sampling Report, background groundwater concentrations of metals are provided in the analytical results tables for comparison where samples were submitted for metals analysis.

3.1 ANOMALOUS RESULTS

An anomaly is an exceedance of the applicable criteria that is not attributable to background concentrations and/or Site contamination. It typically succeeds and precedes non-exceedance sample results and is not representative of historical data for that location. Anomalies can be caused by sample equipment, laboratory equipment, seasonality changes, etc. For the purposes of this report, analytes noted as anomalies will not be considered part of the long term monitoring plan for that site. No anomalous results were reported during this annual sampling event.

4.0 FINDINGS AND RECOMMENDATIONS

Each of the sites are discussed as individual appendices to this report. As part of each appendix, findings and recommendations are presented for that Site. The recommendations provided are for sampling in 2016 to allow for the continued monitoring of groundwater conditions.

For each of the sites, historical data from the last four previous quarterly sampling events or the last two annual sampling events [in this case the 2013 baseline sampling event and 2014 annual (4th quarter) sampling event] along with data collected during the annual 2015 sampling event, were evaluated to determine if further sampling is warranted or maybe reduced. Analytical results were evaluated to determine if the detection was an anomaly, potentially part of an overall trend, or affected by seasonal changes. The 2015 groundwater sampling results for each of the 12 sites are discussed in individual appendices to this report. A summary of long term groundwater monitoring recommendations for 2016 is presented in **Table 4.**

Notes:

MWs = monitoring wells
N/A = not applicable
VOCs = volatile organics compounds
SVOCs = semi-volatiles organic compounds
TMB = trimethhylbenzene
VC = vinyl chloride
TCE = trichloroethene
PCE = tetrachloroethene
1,1-DCA = 1,1-dichloroethane
1,2-DCA = 1,2-dichloroethane
TBA = Tert-Butyl Alcohol

1. Exceedance is defined as a parameter that was greater than NJDEP GWQS or EPA MCL if a NJDEP GWQS has not been established for a compound.
2. The recommendations are for sampling in 2016 to allow for the continued monitoring of groundwater conditions for sites currently not in the RI process.
3. Comparison between highest historic concentrations and 2015 (Fourth Quarter) highest concentration.

Lab Qualifiers
J = Estimated (detect or non-detect) value
D = Results from dilution of sample
E = Estimated result
JN = Tentatively identified compound, estimated concentration

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-02 were gauged on October 6, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 2.54 (M2MW02) to 8.68 (M2MW17) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow directions are to the north-northwest, as shown in **Figures 2 and 3**, respectively.

During the groundwater gauging, the physical condition of FTMM-02 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from six monitoring wells located at FTMM-02 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-02 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells at FTMM-02 prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells M2MW03, M2MW10, M2MW11, M2MW21, M2MW22 and M2MW24 on November 24, 2015. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

Groundwater monitoring has been conducted at FTMM-02 since May 1997. From May 1997 to March 2004, groundwater sampling consisted of VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals. From June 2004 to December 2009, FTMM-02 monitoring wells were sampled primarily for VOCs. Since December 2010, the last four historical rounds of groundwater sampling have been carried out on a quarterly basis and were comprised of VOC and metals analysis. Historical groundwater analytical results are presented in **Table 2.**

Historically, benzene, chlorobenzene, *tert*-butyl alcohol (TBA), aluminum, arsenic, beryllium, chromium, iron, lead, manganese, sodium and vanadium were detected above their respective NJDEP Ground Water Quality Standard (GWQS). Additionally, beryllium, manganese and sodium were detected in exceedance of their background concentration and are attributed to natural sources from the glauconitic soils beneath the site and are not indicative of a release from the site.

In August 2013 during the baseline sampling event, sixteen monitoring wells were sampled for VOCs and pesticides. Benzene and chlorobenzene were the only VOCs detected in M2MW03 in exceedance of their NJDEP GWQS during the sampling event. Pesticides were not detected in FTMM-02 monitoring wells during the sampling event and groundwater monitoring for pesticides was discontinued in 2015. Results of the August 2013 Baseline Sampling Event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 10 out of the 16 groundwater monitoring wells were removed from the long-term monitoring (LTM) program including M2MW02, M2MW04, M2MW05, M2MW06, M2MW07, M2MW08, M2MW09, M2MW12, M2MW13, and M2MW23, and monitoring for pesticides was discontinued.

During the annual (fourth quarter) 2014 groundwater sampling event, six monitoring wells were sampled for VOCs. Benzene was the only VOC detected in M2MW03 in exceedance of its NJDEP GWQS during the sampling event. Benzene was detected at M2MW03 at an estimated concentration of 2.2J µg/L which is above the NJDEP GWQS of 1 µg/L. Results of the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**.

The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter. Based on this approval, four out of the six groundwater monitoring wells were sampled in 2015 for one additional sampling event using LFPS methods, including M2MW11, M2MW21, M2MW22 and M2MW24.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Groundwater analytical results from the samples collected during the annual 2015 groundwater sampling event are presented in **Table 3.** Methyl *tert*-butyl ether (MTBE) and TBA were the only two compounds detected above their respective GWQS (at monitoring well M2MW22) during this sampling event. MTBE was detected at 73 µg/L above the NJDEP GWQS of 70 µg/L and TBA was detected at 150 µg/L above the NJDEP GWQS of 100 µg/L. Concentrations of constituents detected in the groundwater above their NJDEP GWQS during the Annual 215 Sampling Event are shown on **Figure 4.**

5.0 FINDINGS AND RECOMMENDATIONS

Historically, benzene (M2MW03, M2MW11, M2MW21, and M2MW24), chlorobenzene (M2MW03) and TBA (M2MW22) were detected in exceedance of their NJDEP GWQS. Based on data from the last three rounds of annual sampling (August 2013, December 2014 and November 2015) benzene concentrations at M2MW03 have stabilized between 2.2J µg/L (December 2014) and 3.7J µg/L (August 2013) and was not detected during this sampling event (November 2015). Benzene was not detected at the other three wells in August 2013, December 2014 and November 2015. Chlorobenzene has not been detected above the NJDEP GWQS at M2MW03 since the 2014 annual sampling event.

Monitoring wells M2MW11, M2MW21, and M2MW24 did not contain VOCs above the NJDEP GWQS during this sampling event, or the 2014 annual and the August 2013 Baseline Sampling Events.

TBA exceeded the NJDEP GWQS only one in one monitoring well (M2MW22) during the annual 2015 sampling event. TBA was not analyzed during the 2013 and not detected at M2MW22 in December 2014. TBA was not detected at any other wells during the December 2014 sampling event.

Historically, MTBE has been detected at M2MW22 ranging from non-detect (December 2008) to 26 µg/L (August 2013). Until the 2015 sampling event; MTBE had not been detected above the NJDEP GWQS at any of the wells in the LTM program and there is no information to indicate it is associated with the landfill since it was closed in 1966 and the use of MTBE as a gasoline additive started in 1979. There are multiple upgradient potential sources of the MTBE and other gasoline constituents found in the groundwater at FTMM and located in the immediate area including: a gas station (Getty #56395), the Eatontown Firehouses (#92-05-27-1515 and #94-01-24-1509-41) and the Lukoil Service Station #57257 which has a Classification Exemption Area (CEA) for benzene, MBTE, TBA, ethylbenzene and xylenes. The Getty Gas Station located at the corner of Broad Street and Rose Court is on the NJDEP known contaminated sites list, and has been identified with PI number 001751 It is located upgradient of FTMM and approximately 400 feet to the south of FTMM-02, and 600 feet south of well M2MW22. The Eatontown Firehouses #92-05-27-1515 and #94-01-24-1509-41 are located at Broad Street and White Street, approximately 1,100 feet southwest of FTMM-02 and M2MW22, and is on the known contaminated sites list and has two CEAs for benzene and MBTE. The Lukoil Service Station which has a CEA for benzene, MBTE, TBA, ethylbenzene and xylenes is located at Broad Street and Tinton Avenue approximately 1,800 feet west southwest of FTMM-02 and M2MW22.

An extensive groundwater sampling history has been established as part of the LTM program implemented for FTMM-02, and a comprehensive review of the data was performed as part of the January 2016 Remedial Investigation Report (RIR) which has been submitted to the NJDEP. Data collection under this LTM program is no longer necessary to support an investigation, and will be transitioned to a program which will support the revision to the existing CEA recommended in the RIR at FTMM-02. Future groundwater sampling at FTMM-02 will be performed and reported under biennial certifications required for the existing CEA. The existing CEA accepted by the NJDEP in January 2001 (and updated in 2011) will be revised to include benzene, chlorobenzene, TBA and MTBE which exceeded the GWQS in recent groundwater events. Although TBA and MTBE are attributed to an off-site upgradient source they will be included in the CEA of the site. A biennial sampling frequency will be implemented for select wells for an appropriate set of compounds that are consistent with the existing CEA as described in **Table 4**. The biennial sampling frequency will provide data for the biennial certifications, with the sampling to be performed in the same year as the biennial CEA certification. The next biennial sampling and certification for FTMM-02 will be performed in 2017.

Notes:
1) The synoptic round of water levels in the wells was collected on October 6, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Table 2
Historical Groundwater Analytical Results

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Table 2
Historical Groundwater Analytical Results

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Table 3
Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-02 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.
5) Bold chemical detection

6) Chemical result qualifiers are assigned by the laboratory and are evaluated and modified (if necessary) during the data validation.
[blank] = detect, i.e. detected chemical result value.
J-DL = Elevated sample detection limit due to difficult sample matrix.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected at or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
E (or ER) = Estimated result.
D = Results from dilution of sample.
JN = Tentatively identified compound, estimated concentration.
J = estimated detected value due to a concentration below the reporting limit or due to discrepancies in meeting certain analyte-specific quality control.
B = Compound detected in the sample at a concentration less than or equal to 5 times (10 times for common lab contaminants) the blank concentration.

7) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a NJDEP Interim Specific or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2015-05 MCL. ###

8) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
- The 2015-06 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=0.1) - 5/31/2015 (Last revised)

9) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-02 Closed Solid Waste landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results[1]		2015 Evaluation					Rationale for Monitoring for the Biennial Certifications for the CEA
	Are There Exceedances of the NJDEP GWQS (Yes or No) (If Yes, Identify Compound)[1]	Do Metals Exceed FTMM Background Concentration Yes or No (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well in the CEA (Yes or No)	
FTMM-02								
M2MW03	Benzene, Chlorobenzene	Yes	No	No	Yes	No	Yes	Monitor for benzene and chlorobenzene.
M2MW10	No	N/A	No	No	No	Yes	Yes	Well to be retained for down gradient monitoring of benzene.
M2MW11	No	N/A	No	No	Yes	No	No	Discontinue.
M2MW22	tert-butyl alcohol, MTBE	N/A	No	No	Yes	N/A	Yes	Monitor for TBA and MBTE
M2MW24	No	Yes	No	No	Yes	N/A	No	Discontinue.

Notes:

1. Have any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in the CEA, unless attributable to an off-site source.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds?
3. N/A = Not Applicable, MTBE
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report monitoring wells M2MW02, M2MW04, M2MW05, M2MW06, M2MW07, M2MW08, M2MW09, M2MW12, M2MW13, and M2MW23 were removed from the long-term monitoring program for 2014 at FTMM-02. Groundwater monitoring for pesticides and metals were also discontinued in 2014 based on the NJDEP approval letter.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-05 were gauged on October 1, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 1.23 (M5MW09) to 9.97 (M5MW15) feet above mean sea level (amsl). The inferred shallow flow direction is to the west-northwest towards Mill and Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-05 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from four monitoring wells located at FTMM-05 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-05 is sampled on an annual basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-05, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed October 1, 2015 and samples were retrieved on December 14, 2015. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From May 1997 to July 2003, groundwater monitoring wells were sampled for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and metals at FTMM-05. From July 2003 to December 2009, monitoring wells were sampled solely for VOCs, and from December 2009 to June 2011, monitoring wells were sampled for VOCs and metals.

Since July 2011, the last four historical rounds of groundwater sampling were conducted on a bi-monthly basis and have been comprised of VOC and metals analysis. Several metals were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS) including aluminum, arsenic, iron, lead, manganese, and sodium. However, these metals did not exceed their background concentration established in the 1995 Weston Report.

FTMM-05 monitoring wells M5MW11, M5MW16, M5MW19, M5MW20, and M5MW23 exhibited detections above the NJDEP GWQS of either tetrachloroethene (PCE),

trichloroethene (TCE), vinyl chloride (VC) or a combination of these compounds within the last four historical groundwater monitoring events. Historical groundwater analytical results are presented in **Table 3**.

Groundwater analytical data from samples collected from 10 monitoring wells during the August 2013 event are presented in **Table 4**. Monitoring wells sampled in 2013 exhibited detections above the NJDEP GWQS for PCE (M5MW11, M5MW23), TCE (M5MW20, M5MW23), or VC (M5MW16). The detections from August 2013 appear to be part of a trend of low-level VOC exceedances.

The Final August 2013 Baseline Groundwater Sampling Report was approved by the NJDEP in their February 5, 2015 letter. Based on this approval, six out of the ten groundwater monitoring wells were removed from the long-term monitoring program, including M5MW10, M5MW12, M5MW13, M5MW14, M5WM18 and M5MW19.

During the annual (fourth quarter) 2014 sampling event, PCE was detected in four samples (M5MW11 [1.8J µg/L], M5MW16 [1.7J µg/L], M5MW20 [1.2J µg/L] and M5MW23 [23 µg/L]) at concentrations above the NJDEP GWQS of 1 µg/L. TCE was also detected at M5MW23 with an estimated concentration of 2J µg/L above the NJDEP GWQS of 1 µg/L. These detections are located upgradient of and limited to the northern portion of the FTMM-03 landfill.

Based on the annual 2014 results, it was recommended that groundwater sampling be continued at M5MW11, M5MW16, M5MW20, and M5MW23 for the analysis of VOCs. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Groundwater analytical data from the four samples collected during the annual 2015 event are presented in **Table 4**. PCE continues to be detected in the four samples (M5MW11 [2.5J µg/L], M5MW16 [2.3J µg/L], M5MW20 [1.4J µg/L] and M5MW23 [4.8J µg/L]) at concentrations above the NJDEP GWQS of 1 µg/L. These detections are located upgradient of and limited to the northern portion of the FTMM-05 landfill. Concentrations of constituents detected in the groundwater above their NJDEP GWQS during the Annual 215 Sampling Event are shown on **Figure 3.**

5.0 FINDINGS AND RECOMMENDATIONS

Historically PCE (M5MW11, M5MW16, M5MW20, and M5MW23) and TCE (M5MW20 and M5MW23) have been detected in the groundwater in exceedance of their NJDEP GWQS, respectively. The concentrations appear to be part of an overall trend of low-level VOC exceedances above the NJDEP GWQS with the exception of M5MW23. While TCE concentrations at M5MW23 are part of this same trend, PCE concentrations have fluctuated over time ranging from 1.76J µg/L (December 2009) to 50 µg/L (August 2013), and back down to 4.8J µg/L during this sampling event (December 2015). These fluctuations indicate a

seasonal trend. Monitoring well MW5MW16 is located at the upgradient and outside the landfill northern boundaries, indicating an upgradient source of PCE.

An extensive groundwater sampling history has been established as part of the LTM program implemented for FTMM-05, and a comprehensive review of the data was performed as part of the October 2015 RIR which has been submitted to the NJDEP. Data collection under this LTM program is no longer necessary to support an investigation, and will be transitioned to a program which will support the Classification Exemption Area (CEA) recommended as a preferred remedy in the RIR at FTMM-05. Future groundwater sampling at FTMM-05 will be performed and reported under biennial certifications required for the future CEA. The CEA will include a biennial sampling frequency for select wells for an appropriate set of compounds that are representative of more recent groundwater conditions as shown in **Table 5**. The biennial sampling frequency will provide data for the biennial certifications with the sampling to be performed in the same year as the biennial CEA certification. The next biennial sampling for FTMM-05 is anticipated to be performed in 2017.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result
b - Elevated sample detection limit due to difficult sample matrix
MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result
b - Elevated sample detection limit due to difficult sample matrix
MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Table 4
Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-05 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-05 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2015 Evaluation					Rationale for Monitoring for the Biennial Certifications for the CEA
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well in the CEA (Yes or No)	
FTMM-05									
M5MW11	VOC	PCE	N/A	No	No	Yes	N/A	Yes	PCE exceedance part of low-level trend
M5MW16		TCE, PCE,VC	N/A	No	No	Yes	N/A	Yes	Upgradient monitoring well. PCE exceedance part of low-level trend, continue to monitor for TCE, PCE, and VC
M5MW20		PCE, TCE	N/A	No	No	Yes	N/A	Yes	PCE exceedance part of low-level trend, continue to monitor for PCE and TCE
M5MW23		PCE, TCE	N/A	No	No	Yes	N/A	Yes	TCE and PCE part of overall exceedance trend., continue to monitor for PCE and TCE

Notes

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then include analyte in CEA.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds?
3. PCE - tetrachloroethene
4. TCE - trichloroethene
5. VC - vinyl chloride
6. N/A = Not applicable
7. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells M5MW10, M5MW12, M5MW13, M5MW14, M5WM18 and M5MW19 were removed from the long-term monitoring sampling program.

ATTACHMENTS

Attachment A NJDEP PDB Checklists

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: M-5 Landfill
3. Well Designation: M5MW20
4. Well Permit Number: 29-40122

5. Type of Well: ☒ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other
6. Well Surface Finish: ☒ Stick Up ☐ Flush Mount
7. Location of Measuring Point: ☒ Top of Casing ☐ Other (specify) _____
8. NOTE: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.): 2.00
9. Total Well Depth (fbgs): 16.36
10. Screened interval/open hole (fbgs): 6.36 - 16.36
11. Well Casing: Diameter 4 Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
12. Well Screen (or open hole diameter): Diameter 4 Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
13. Screen Size (slot): Screen Slot Size _____

14. Date and Time of Deployment: Date: 10/1/15 Time: 1055
15. Depth to Ground Water: Depth to ground water at time of deployment 6.83
16. Date and Time of Retrieval: Date: 12/14/15 Time: 1415
17. Depth to Ground Water: Depth to ground water at time of retrieval 6.20
18. Type of Deployment Line Used: Diameter: 3/16" Material: poly

19. Material and Mass (oz.) of PDBS Weight: Stainless Steel 20 oz (stainless steel recommended).
20. Type of PDBS Used
   ☐ Lab Filled. (Modified Trip Blank must be taken at time of deployment)
   ☒ Field Filled. (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____
22. Position of PDBS Weight
   ☐ Attached to bottom of PDBS and suspended in well
   ☐ Attached to bottom of deployment line and suspended in well
   ☐ Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
13.65			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
   ☐ No, this well is being profiled during this sampling round
   ☒ Yes, this well was profiled already. Date when well was profiled: 8/27/2013
25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
   ☐ No, flow testing has not been conducted in this well
   ☐ Yes, flow testing of this well was conducted. Date of testing: _____
   Type of flow meter used: _____
   Measurements taken every _____ feet [Please Attach Results]
26. Weather Conditions During Deployment: Temp. 54°F Wind NE 10-15 mph ☐ Sunny ☒ Overcast ☒ Raining ☐ Snowing
27. Weather Conditions During Retrieval: Temp. 58°F Wind SW 0-5 ☐ Sunny ☒ Overcast ☐ Raining ☐ Snowing

28. Field Sampling Technician: Name(s) and Company (please print clearly)

Name	Company
Alex DiTonno	Parsons
Chris Watson	Parsons

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-08 were gauged on October 1, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 0.93 (M8MW23) to 5.66 (M8MW11) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the north and northeast towards Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-08 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from eight monitoring wells located at FTMM-08 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-08 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells M8MW11, M8MW12, M8MW15, M8MW16, M8MW17, M8MW21, RM8MW24 and 697MW01 on November 19, 2015 and November 20, 2015. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C at wells M8MW11, M8MW12, M8MW15, M8MW16, RM8MW24 and 697MW01. The groundwater samples from 697MW01, M8MW11, M8MW17 and M8MW21 were analyzed for lead via USEPA Method SW6010C. In addition, the groundwater sample from 697MW01 was analyzed for pesticides via EPA Method 8081B. It should be noted that M8MW11 was not located in 2014, but was located and sampled for the 2015 sampling event, however there was not enough water to collect a sample using LFPS methods, the sample was collected using a bailer and the volume averaging method. It should be noted the Annual (fourth quarter) 2014 Groundwater Sampling Report recommended to discontinue groundwater sampling at monitoring wells M8MW15, M8MW16, M8MW17, M8MW21, and RM8MW24. However, at the time of the 2015 sampling event the Annual (fourth quarter) 2014 Groundwater Sampling Report had not been approved by the NJDEP, therefore these monitoring wells were sampled.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From June 1997 to March 2004, groundwater samples were collected for VOCs, semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides from

FTMM-08 monitoring wells. From June 2004 to December 2009, monitoring wells were primarily sampled for VOCs. From March 2010 to September 2010, groundwater samples were collected for VOC and metals.

From December 2010 to August 2011, the last four historical rounds of groundwater sampling conducted at the FTMM-08 site have consisted of VOC and metals analysis and were conducted on a quarterly basis. During this period, several metals including aluminum, arsenic, barium, calcium, iron, lead, manganese, magnesium and sodium were detected above of their respective NJDEP Ground Water Quality Standards (GWQS) in the majority of the Site monitoring wells. Beryllium, cadmium, chromium, calcium, magnesium, manganese, lead and sodium were detected in FTMM-08 monitoring wells above their background concentration established in the 1995 Weston Report. However, these metals are not associated with historical site operations.

Between December 2010 and August 2011, benzene (M8MW11 and M8MW15) and tetrachloroethene (PCE) (M8MW12 and 697MW01) were detected above their NJDEP GWQS of 1 µg/L. Historical groundwater analytical results are presented in **Table 2**.

Groundwater analytical data from samples collected from 13 monitoring wells during the August 2013 baseline event are presented in **Table 3**. Groundwater samples were analyzed for VOCs, pesticides, and lead. Tetrachloroethene (PCE) was detected at an estimated concentration of 1.3J µg/L in M8MW12, which is above the NJDEP GWQS of 1 µg/L for PCE. There were no pesticides or lead detections above the NJDEP GWQS in the August 2013 baseline groundwater sampling event.

The Final August 2013 Baseline Groundwater Sampling Report was approved by the NJDEP in their February 5, 2015 letter. Based on this approval, six monitoring wells out of the 14 monitoring wells on the site were removed from the long term monitoring (LTM) program; including M8MW13, M8MW14, M8MW18, M8MW19, M8MW20, and M8MW22. Additionally, groundwater monitoring for pesticides and metals other than lead were discontinued for all remaining wells, except 697MW01.

Groundwater analytical data from samples collected from seven monitoring wells during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**. Groundwater samples were analyzed for VOCs at wells M8MW12, M8MW15, M8MW16, RM8MW24 and 697MW01. PCE was the only VOC detected at an estimated concentration of 1.3J µg/L and 1.6J µg/L at monitoring wells M8MW12 and 697MW01, respectively, only slightly above the NJDEP GWQS of 1 µg/L. The groundwater samples from 697MW01, M8MW17 and M8MW21, were also analyzed for lead and it was not detected in the samples. In addition, the groundwater sample from 697MW01 was analyzed for pesticides, 4'4-DDD was detected at a concentration of 0.83 µg/L, above the NJDEP GWQS of 0.1 µg/L.

Based on the annual 2014 results, it was recommended that groundwater sampling at monitoring wells M8MW15, M8MW16, M8MW17, M8MW21, and RM8MW24 be discontinued and these wells be removed from the LTM. Three monitoring wells were recommended for continued annual groundwater sampling including: M8MW11 for VOC and lead analysis, M8MW12 for VOC, and 697MW01 for pesticides and VOCs. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Groundwater analytical data from samples collected from eight monitoring wells during the annual (fourth quarter) 2015 groundwater sampling event are presented in **Table 3**. Groundwater samples were analyzed for VOCs at wells M8MW11, M8MW12, M8MW15, M8MW16, RM8MW24 and 697MW01. PCE was the only VOC detected above the NJDEP GWQS of 1 µg/L, at an estimated concentration of 1.3J µg/L in only monitoring well M8MW12.

The groundwater samples from 697MW01, M8MW11, M8MW17 and M8MW21, were analyzed for lead and it was detected at M8MW11 and M8MW21 at a concentration of 202 µg/L and 8.1 µg/L, respectively, both above the NJDEP GWQS of 5 µg/L. A dissolved lead sample was also collected at M8MW11 (in accordance with the Standard Operating Procedures [SOP]) since the turbidity reading of 128 NTU was above the 50 NTU criteria at the time of sampling probably because the sample was collected using a bailer. Dissolved lead was not detected above the method detection limit in the filtered sample collected from M8MW11. A sample for dissolved lead analysis was not collected from M8MW21 since the turbidity reading at was 37 NTU. In addition, the groundwater sample from 697MW01 was analyzed for pesticides, 4'4-DDD was detected at a concentration of 0.7 µg/L, above the NJDEP GWQS of 0.1 µg/L. Concentrations of constituents detected in the groundwater above their NJDEP GWQS during the Annual 2015 Sampling Event are shown on **Figure 4.**

5.0 FINDINGS AND RECOMMENDATIONS

Based on the historical and annual 2015 groundwater sampling results, VOCs concentrations at M8MW11 continue to be detected below the NJDEP GWQS. Lead concentrations at M8MW11 are attributed to high turbidity and not indicative of site conditions or historical operations. PCE concentrations at M8MW12 continue to be detected slightly above the NJDEP GWQS of 1 µg/L.

The 2014 and 2015 concentrations of PCE and 4'4-DDD detected in 697MW01 exceeded their NJDEP GWQS of 1 µg/L and 0.1 µg/L, respectively. PCE concentrations have remained steady over the last three yearly sampling events; at an estimated concentration of 1.3 µg/L.

Historically, lead has been detected above the NJDEP GWQS at monitoring wells M8MW17 and M8MW21. However, lead has not been detected above its NJDEP GWQS of 5 µg/L in the previous three sampling events (2011, 2013 and 2014) at these two wells. Although, lead was detected at monitoring well M8MW21 slightly above the NJDEP GWQS during the 2015 sampling event it appears to be attributed to elevated turbidly levels and is not associated with historical site operations.

The Annual (fourth quarter) 2014 Groundwater Sampling Report recommended to discontinue groundwater sampling at monitoring wells M8MW15, M8MW16 and RM8MW24. However, at the time of the 2015 sampling event the Annual (fourth quarter) 2014 Groundwater Sampling Report had not been approved by the NJDEP, therefore these monitoring wells were sampled. Historically, benzene has been detected slightly above its NJDEP GWQS at monitoring wells M8MW15 and M8MW16. However, benzene has not been detected in the

2015 sampling event or last three sampling events above its NJDEP GWQS of 1 µg/L at M8MW15. Benzene was detected at an estimated concentration of 0.25 µg/L during the 2015 sampling event and below the NJDEP GWQS during the last two sampling events at M8MW16. In addition, VOCs have not been detected above the NJDEP GWQS in the samples collected from RM8MW24 during the last two sampling events (2013 and 2014), or the 2015 sampling event.

An extensive groundwater sampling history has been established as part of the LTM program implemented for FTMM-08, and a comprehensive review of the data was performed as part of the April 2016 RIR which has been submitted to the NJDEP. Data collection under this LTM program is no longer necessary to support an investigation, and will be transitioned to a program which will support the Classification Exemption Area (CEA) recommended as a preferred remedy in the RIR at FTMM-08. Future sampling will be performed and reported under biennial certifications required for the future CEA. LTM in support of the future CEA will include a biennial sampling frequency for select wells for an appropriate set of compounds that are representative of more recent groundwater conditions as shown in **Table 4**. The biennial sampling frequency will provide data for the biennial certifications with the sampling to be performed in the same year as the biennial CEA certification. The next biennial sampling for FTMM-08 is anticipated to be performed in 2017.

Notes:
1) The synoptic round of water levels in the wells was collected on Ocotber 1, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available, well not located in the field
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Table 3
Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-08 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-08 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results[1]		2015 Evaluation					Rationale for Monitoring for the Biennial Certifications for the CEA
	Does a Compound Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect? (Y/N)[2]	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well in the CEA (Yes or No)	
FTMM-08								
697MW01	beta-BHC, alpha- and gamma- chlordane, 4-4'-DDD, 4-4'-DDT, dieldrin, heptachlor, PCE	No	No	No	Yes	No	TBD	Well could not be located and was not sampled in August 2013. Well located and sampled in October 2014. Beta-BHC, alpha- and gamma- chlordane, 4-4'-DDT, dieldrin, and heptachlor exceed NJDEP GWQS in 2009 (last quarterly sampling event), 4-4' DDD and PCE were above GWQS in 2014.
M8MW11	lead, manganese	Yes	No	Yes	No	No	Yes	Pb detection above NJDEP GWQS due to high turbitiy in 2015. Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW12	PCE	N/A	No	No	Yes	No	Yes	PCE exceeded in 2013 and 2014.
M8MW14	manganese	Yes	No	No	No	No	Yes	Well discontinued in 2013. Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW15	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW16	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW17	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW18	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW19	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.
M8MW23	manganese	Yes	No	No	No	No	Yes	Manganese included in the CEA based on NJDEP 2016 June comments on review of FTMM-08 RIR.

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then include analyte in CEA list.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds?
3. N/A = Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells M8MW13, M8MW14, M8MW18, M8MW19, M8MW20, and M8MW22 were removed from the long-term monitoring sampling program. Additionally groundwater monitoring for pesticides and metals other than lead were discontinued for all remaining wells, except 697MW01.
5. Per the 1/26/16 NJDEP approval letter of the 2014 Annual (Fourth Quarter) Groundwater Sampling Report, groundwater monitoring wells M8MW15, M8MW16, M8MW17, M8MW21, and RM8MW24 were removed from the long-term monitoring sampling program.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located at or near FTMM-18 were gauged on October 1, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from -0.92 (MP18MW24) to 6.97 (M18MW23) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is to the north towards Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition monitoring wells at or near FTMM-18 were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from four monitoring wells (296MW04, 296MW06, M18MW22 and M18MW23) located at FTMM-18 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-18 is sampled on an annual basis. The groundwater sampling program included measuring the depths to water in monitoring wells and the sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed October 1, 2015 and samples were retrieved on December 14, 2015. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From June 1997 through November 2004, FTMM-18 monitoring wells were sampled for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and metals. From February 2005 to September 2010, monitoring wells were sampled primarily for metals.

In the last four historical rounds of groundwater sampling conducted on a monthly basis at FTMM-18 from October 2010 to April 2011, samples were analyzed for VOCs and metals. Several metals including aluminum, beryllium, cadmium, iron, manganese, nickel, and sodium were detected above their respective NJDEP Ground Water Quality Standards (GWQS). However, only antimony, beryllium, manganese and sodium were detected at concentrations greater than their background concentrations established in the 1995 Weston Report. The background concentration for sodium however is lower than the NJDEP GWQS. Elevated sodium concentrations are most likely attributable to the site's proximity to the ocean and other estuarine water bodies. Glauconitic sediments underlying the site are rich in antimony,

beryllium and manganese, resulting in high concentrations of these analytes in groundwater. Historical groundwater analytical results are presented in **Table 3.**

Additionally, within the four most recent historical rounds of sampling (October 2010 – April 2011), benzene was detected in M18MW22 (1.58 µg/L to 1.99 µg/L) and M18MW23 (664.44 µg/L to 1,078.96 µg/L) above its NJDEP GWQS of 1 µg/L.

Groundwater samples were collected for only VOCs analysis in August 2013. 1,2-dichloroethane (1,2-DCA) was detected in the two PDB samples collected from M18MW22 above its NJDEP GWQS of 2 µg/L; concentrations ranged from 13 µg/L to 26 µg/L. Additionally, benzene was detected in only one of the PDB samples in M18MW22 and at a concentration of 0.37 µg/L, below its NJDEP GWQS of 1 µg/L. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 4**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, two out of the four groundwater monitoring wells were removed from the long term monitoring (LTM) program including MP18MW24 and MP18MW25.

Four (296MW03, 296MW04, 296MW06, and 296MW07) of seven monitoring wells originally installed for FTMM-54 and have been historically sampled in association with FTMM-18 to provide groundwater quality data since the former fuel distribution piping associated with FTMM-54 extended beneath the southwestern portion of FTMM-18. One VOC (benzene) exceeded the NJDEP GWQS but the exceedance was limited to well 296MW06, which is located in the footprint of FTMM-18. In a February 4, 2015 letter, the NJDEP issued a no further action for groundwater at FTMM-54 based on the types of VOCs detected in monitoring well (296MW06). The groundwater is addressed under the FTMM-18 site since the suspected source of the impacts are attributed to the fuel spills that occurred during use of diesel and gasoline generators to support field exercises at FTMM-18.

Groundwater samples were collected for only VOCs analysis during the 2014 annual (4th quarter) sampling event. Benzene was detected in only two (296MW06 and M18MW23) of the four wells sampled at concentrations above the NJDEP GWQS of 1 µg/L. Benzene was detected in the two PDB samples collected from 296MW06 at concentrations of 1.6 µg/L (sample depth of 5.07 ft.) and 15 µg/L (sample depth of 10.1 ft.), and M18MW23 at concentrations of 6.5 µg/L (sample depth of 16.22 ft.) and 9.1 µg/L (sample depth of 9.28 ft.). Groundwater analytical results for samples collected during the annual (fourth quarter) 2014 sampling event are presented in **Table 4**.

Based on the annual 2014 results, it was recommended that annual groundwater sampling continue at monitoring wells M18MW22, M18MW23, 2964MW04, and 296MW06, The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Benzene was detected above the NJDEP GWQS of 1 µg/L in only one of the four wells (296MW06) sampled; and at a concentration of 6 µg/L. No other VOCs were detected above

their NJDEP GWQS. Groundwater analytical results for samples collected during the annual (fourth quarter) 2015 sampling event are presented in **Table 4**. Constituents detected in the groundwater above their NJDEP GWQS during the Annual 2015 Sampling Event are shown on **Figure 3.**

5.0 FINDINGS AND RECOMMENDATIONS

Historical concentrations of 1,2-DCA and benzene have been detected above the NJDEP GWQS in M18MW22. Benzene was detected above the GWQS in 2014 but not in 2015 at M18MW23, and in 2015 benzene was detected above the GWQS but not in 2014 at M18MW06.

An extensive groundwater sampling history has been established as part of the LTM program implemented for FTMM-18, and a comprehensive review of the data was performed as part of the October 2015 Remedial Investigation Report (RIR) which has been submitted to the NJDEP. Data collection under this LTM program is no longer necessary to support an investigation, and will be transitioned to a program which will support the Classification Exception Area (CEA) recommended in the RIR as the preferred remedy at FTMM-18. Future groundwater sampling at FTMM-18 will be performed and reported under biennial certifications required for the future CEA recommended in the RIR. The LTM for the CEA will include a biennial sampling frequency for select wells for an appropriate set of compounds that are representative of more recent groundwater conditions as shown in **Table 5**. The biennial sampling frequency will provide data for the biennial certifications with the sampling to be performed in the same year as the biennial CEA certification. The next biennial sampling for FTMM-18 is assumed to be performed in 2017.

Notes:
1) The synoptic round of water levels in the wells was collected on October 7, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

Notes:
Yellow highlight indicates an exceedence of NJDEP Class IIA GWQS
TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22,
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

Notes:
Yellow highlight indicates an exceedence of NJDEP Class IIA GWQS
TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22,
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

Table 4
Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-18 Closed Solid Waste Landfill/Former Training Area
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-18 Closed Solid Waste Landfill/Former Training Area
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID		Interpretation of Historical and 2015 Results[1]		2015 Evaluation					Rationale for Monitoring for the Biennial Certifications for the CEA
	Chem Class / Analyte	Does a Compound Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect? (Y/N)[2]	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well in the CEA (Yes or No)	
FTMM-18									
M18MW22	VOCs	1,2 DCA, Benzene	No	No	No	Yes	No	Yes	Continued 1,2DCA and benzene exceedances.
M18MW23		Benzene, carbon tetrachloride (minor detections)	No	No	No	Yes	No	Yes	Historical carbon tetrachloride exceedance (minor detections). Benzene exceedence in 2014. Well could not be located and was not sampled in August 2013.
296MW04		No	N/A	No	No	No	Yes	Yes	Monitor for benzene, 1,2-DCA, and carbon tetrachloride as a downgradient delineation point.
296MW06		Benzene	N/A	No	No	Yes	No	Yes	Continued benzene exceedances.

Notes

1. Have any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then include in CEA list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. 1,2-DCA = 1,2-dichloroethane
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells MP18MW24, MP18MW25, 296MW01, 296MW02, 296MW03, 296MW07, and 296MW08 were removed from the long-term monitoring sampling program for FTMM-18 and former FTMM-54, lead was also discontinued from the former FTMM-54 wells. Per the 2/4/15 groundwater NFA issued by the NJDEP at site FTMM-54, monitoring wells 296MW04 and 296MW06 have been incorporated into the FTMM-18 site.

ATTACHMENTS

Attachment A NJDEP PDB Checklists

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: M-54
3. Well Designation: 296 MW04
4. Well Permit Number: 29-33989

5. Type of Well: ☒ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other
6. Well Surface Finish: ☒ Stick Up ☐ Flush Mount
7. Location of Measuring Point: ☒ Top of Casing ☐ Other (specify) _____
8. NOTE: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.): 1.10
9. Total Well Depth (fbgs): 12.20
10. Screened Interval/open hole (fbgs): 2.7 - 12.20
11. Well Casing: Diameter: 4 Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
12. Well Screen (or open hole diameter): Diameter: 4 Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
13. Screen Size (slot): Screen Slot Size: 0.02

14. Date and Time of Deployment: Date: 10/1/2015 Time: 0915
15. Depth to Ground Water: Depth to ground water at time of deployment: 2.09
16. Date and Time of Retrieval: Date: 12/14/15 Time: 1235
17. Depth to Ground Water: Depth to ground water at time of retrieval: 1.81
18. Type of Deployment Line Used: Diameter: 3/16" Material: Poly

19. Material and Mass (oz.) of PDBS Weight: Stainless Steel 20.2 (stainless steel recommended)
20. Type of PDBS Used:
    ☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
    ☒ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.): 18 Diameter (in.): 1.5 Filled: _____
22. Position of PDBS Weight:
    ☐ Attached to bottom of PDBS and suspended in well
    ☐ Attached to bottom of deployment line and suspended in well
    ☐ Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS):

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
6.35			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
    ☐ No, this well is being profiled during this sampling round
    ☒ Yes, this well was profiled already. Date when well was profiled: 12/18/2014
25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
    ☐ No, flow testing has not been conducted in this well
    ☐ Yes, flow testing of this well was conducted. Date of testing: _____
    Type of flow meter used: _____
    Measurements taken every _____ feet [Please Attach Results]
26. Weather Conditions During Deployment: Temp. 54°F Wind NE 10-15 mph ☐ Sunny ☒ Overcast ☒ Raining ☐ Snowing
27. Weather Conditions During Retrieval: Temp. 55°F Wind SW 0-5 mph ☐ Sunny ☐ Overcast ☐ Raining ☐ Snowing

28. Field Sampling Technician: Name(s) and Company (please print clearly)

Name	Company

6. Well Surface Finish: ☒ Stick Up ☐ Flush Mount
7. Location of Measuring Point: ☒ Top of Casing ☐ Other (specify)
8. NOTE: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fogs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.): 2.60
9. Total Well Depth (fogs): 15.21
10. Screened Interval/open hole (fogs): 4.71 - 15.21

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-22 were gauged on September 30, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 46.50 (CW1MW39) to 51.41 (CW1MW26) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow directions are to the east, as shown in **Figures 2 and 3**, respectively.

During the groundwater gauging, the physical condition of FTMM-22 monitoring wells were assessed. The site monitoring wells were found to be in good condition, except for CW1MW32, which remains damaged at the surface and CW1MW30 was missing an expandable plug. It is our understanding that the NJDEP agreed that CW1MW32 will be decommissioned and not be replaced; and the decommissioning of the well will be the responsibility of the Fort Monmouth Economic Revitalization Authority (FMERA). The expandable plug at monitoring well CW1MW30 will be replaced during the next field event.

Additionally, three wells (CW1MW35, CW1MW36 and CW1MW37) were found to have significant accumulations of silt within the well. These three wells, were redeveloped in April 2016.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from six monitoring wells (CW1MW27, CW1MW28, CW1MW29, CW1MW31, CW1MW37, and CW1MW281) located at FTMM-22 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-22 is sampled on a quarterly basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-22, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed September 30, 2015 and samples were retrieved on December 14, 2015. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From April 1997 through February 2004, FTMM-22 monitoring wells were sampled primarily for VOCs, semi-volatile organic compounds (SVOCs) and metals. From March 2004 to January 2010, monitoring wells were sampled for VOCs. From April 2010 to August 2010, groundwater sampling consisted of VOCs and metals analysis.

In the last four historical rounds of groundwater sampling conducted on a quarterly basis from October 2010 to July 2011, samples were analyzed for VOCs and metals. Aluminum, antimony, arsenic, beryllium, cadmium, chromium, iron, lead, manganese, sodium and vanadium were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS). Arsenic, selenium, and sodium were detected at concentrations greater than their background concentration as established in the 1995 Weston Report in several monitoring wells; however selenium and sodium have background concentrations lower than the NJDEP GWQS.

NJDEP approved a no further action determination for monitoring of metals in groundwater at FTMM-22, dated May 7, 2012, therefore metals analysis was discontinued at the Site.

In samples collected during the quarterly sampling events from April 2008 to July 2011, trichloroethene (TCE) was detected above its GWQS of 1 µg/L at monitoring wells CW1MW27 (1.5 µg/L), CW1MW28 (1.64J - 13.15 µg/L) CW1MW29 (1.03 - 29.08 µg/L), CW1MW31 (1.82J - 14.95 µg/L), CW1MW37 (1.29J µg/L) and CW1MW281 (1.15J - 109.9D µg/L). Historical groundwater analytical results are presented in **Table 3.**

Groundwater analytical detections from samples collected during the August 2013 Baseline Sampling Event are presented in **Table 4**. Groundwater samples were analyzed for VOCs from 16 monitoring wells. TCE was detected above its GWQS of 1 µg/L in monitoring well CW1MW29 at an estimated concentration of 2.5J µg/L.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 12 out of the 18 groundwater monitoring wells were removed from the long term monitoring (LTM) program including: CW1MW26, CW1MW30, CW1MW32, CW1MW33, CW1MW34, CW1MW35, CW1MW36, CW1MW38, CW1MW39, CW1MW40, CW1MW282, and CW1MW291.

Groundwater sampling at FTMM-22 was conducted on a quarterly basis for 2014 (in January, May, and September). These data are presented in reports submitted quarterly to the NJDEP. It should be noted that January 2014 and May 2014 sampling events also coincided with a remedial investigation (RI) conducted at the Site. NJDEP FSPM requires that RI related groundwater samples be collected using LFPS methods, which was done. Once the RI investigation samples were collected, PDB methods were used to collect the quarterly long term monitoring samples in September 2014, which is consistent with the NJDEP FSPM.

TCE and vinyl chloride were the only VOCs detected above their NJDEP GWQS during the 2014 quarterly sampling events. TCE was detected above its GWQS of 1 µg/L in the monitoring wells: CW1MW28 (1.5J - 8 µg/L), CW1MW29 (2.5J - 13 µg/L), CW1MW31 (0.47J - 6.8 µg/L), and CW1MW281 (8.6 - 330 µg/L). Vinyl chloride was detected above its GWQS of 1 µg/L in only one monitoring well, CW1MW281 (0.52J - 1.8J µg/L). Groundwater analytical detections from samples collected during the previous 2014 quarterly sampling events are presented in **Table 4**.

Groundwater sampling at FTMM-22 was conducted on a quarterly basis for 2015 in March, May, and September. These data are presented in reports submitted quarterly to the NJDEP. TCE was detected above its GWQS of 1 µg/L in the monitoring wells: CW1MW28 (0.43J - 2J µg/L), CW1MW29 (1.6J - 22 µg/L), CW1MW31 (< 1 - 0.37J µg/L), and CW1MW281 (250 - 390 µg/L). Vinyl chloride was detected above its GWQS of 1 µg/L in two monitoring wells,

CW1MW281 (1.1J - 1.9J µg/L) and CW1MW29 (< 1 - 2.9J µg/L). Groundwater analytical detections from samples collected during the previous 2015 quarterly sampling events are presented in **Table 4**.

Based on the annual 2014 results, it was recommended that quarterly groundwater sampling continue at monitoring wells CW1MW27, CW1MW28, CW1MW29, CW1MW31, CW1MW37, and CW1MW281. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter. In addition, the NJDEP has requested to add CW1MW40 to the LTM plan.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

TCE and vinyl chloride were the only VOCs detected at concentrations above their NJDEP GWSQ during the 2015 Annual Sampling Event. TCE was detected in two samples collected at monitoring wells CW1MW31 (estimated concentration of 1.1J µg/L) and CW1MW281 (300 µg/L) above its NJDEP GWQS of 1 µg/L. Vinyl chloride was also detected at CW1MW281 at an estimated concentration of 1.4J µg/L which is slightly above its NJDEP GWQS of 1 µg/L. Groundwater analytical results from samples collected during the annual (fourth quarter) 2015 groundwater sampling event are presented in Table 4. Constituents detected in the groundwater above the NJDEP GWQS during the 2015 quarterly sampling event are shown on **Figures 4** through **7**.

5.0 FINDINGS AND RECOMMENDATIONS

TCE continues to be detected in monitoring wells CW1MW28, CW1MW29, CW1MW31 and CW1MW281 in exceedance of the NJDEP GWQS of 1 µg/L over the last three quarterly groundwater sampling events of 2015. Concentrations of TCE appear to have remained steady at wells CW1MW28, CW1MW29, and CWMW31. Additionally, the 2014 quarterly sampling results at CW1MW281 show TCE concentrations ranging from 8.9 µg/L (January 2014) to 300 µg/L (December 2014); and concentrations throughout 2015 were similar to the December 2014 concentration. This well has exhibited similar trends back in 2010 where the TCE concentrations increased although the high was 109 µg/L. TCE was detected in the first (estimated concentration for 0.45J µg/L) and second (estimated concentration of 0.99J µg/L) quarters of 2015 at monitoring well CW1MW27, however both detections were below the NJDEP GWQS. TCE was detected in the third (estimated concentration for 0.23J µg/L) and fourth (estimated concentration of 0.34J µg/L) quarters of 2015 at monitoring well CW1MW37, however both detections were below the NJDEP GWQS.

Vinyl chloride concentrations have been detected in only two wells (CW1MW29 and CW1MW281) during the 2015 quarterly sampling events. While the 2015 fourth quarter concentration was below the NJDEP GWQS at CW1MW29, vinyl chloride was were detected above the NJDEP GWQS of 1 µg/L during the third quarter at a concentration of 2.9 µg/L. Vinyl chloride concentrations at CW1MW281 have remained slightly above the NJDEP GWQS of 1 µg/L for all of the four sampling events of 2015 which is consistent with the third and fourth quarters of 2014.

As discussed previously (refer to Section 2.1.4 of the main body of text), the LTM program for groundwater at FTMM-22 will be temporarily suspended beginning in the first quarter of 2016 as agreed to by the NJDEP in their March 16, 2016 letter. Once the RI/FS is completed and a remedy has been accepted by the NJDEP, a revised LTM program for the groundwater will be submitted for FTMM-22.

A review of the historical groundwater sampling results is presented in **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 30, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) -- = Well not gauged.

Notes:
1) Information on well depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
2) DTW = depth to water (measured from the top of well casing)
3) DTB = depth to bottom of well (measured from the top of well casing)
4) TOC = Top of Casing
5) ft. AMSL = feet above mean sea level
6) LFPS = Low-Flow Purging and Sampling
7) PDB = Passive Diffusion Bag
8) N/A = not applicable
9) bgs = below ground surface

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Table 4
Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-22 Former Waste Water Treatment Lime Pit (CWA-1)
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-22 Former Waste Water Treatment Lime Pit (CWA-1)
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results[1]			2015 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)[1]	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-22, CW-1									
CW1MW27	VOC	TCE	N/A	No	No	No	No	Yes (VOCs)	TCE currently detected at levels just below the NJDEP GWQS. Will require a sampling event using LFPS methods to remove well from LTM. Metals attributed to background conditions and are not related to historical site uses, metals discontinued in 2013. LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW28		TCE	N/A	No	No	Yes	No	Yes (VOCs)	Metals discontinued in 2013. LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW29		TCE, VC	N/A	No	No	Yes	No	Yes (VOCs)	Continued monitoring for VOCs. Metals discontinued in 2013.LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW31		TCE	N/A	No	No	Yes	No	Yes (VOCs)	Continued monitoring for VOCs. Metals discontinued in 2013.LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW37		No	N/A	N/A	N/A	N/A	Yes	Yes (VOCs)	Well retained for sentinel purposes. Metals discontinued in 2013.LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW37		N/A	N/A	N/A	N/A	N/A	Yes	Yes (VOCs)	Well retained for sentinel purposes as requested by NJDEP. LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
CW1MW281		TCE, VC	N/A	No	No	Yes	No	Yes (VOCs)	Continued monitoring for VOCs. Metals discontinued in 2013.LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. TCE - trichloroethene
4. VC - vinyl chloride
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells CW1MW26, CW1MW30, CW1MW32, CW1MW33, CW1MW34, CW1MW35, CW1MW36, CW1MW38, CW1MW39, CW1MW40, CW1MW282, and CW1MW291 were removed from the long-term monitoring sampling program.

ATTACHMENTS

Attachment A NJDEP PDB Checklists

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-22 CW-1
3. Well Designation: CW1 MW29
4. Well Permit Number: 29-32593

5. Type of Well: ☒Monitoring ☐Extraction ☐Residential ☐Public Supply ☐Irrigation ☐Other
6. Well Surface Finish: ☒Stick Up ☐Flush Mount
7. Location of Measuring Point: ☒Top of Casing ☐Other (Specify) _____
8. NOTE: PDBS represent a point sample within the screened interval or openhole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (bgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.) 0.80
9. Total Well Depth (bgs): 15.55
10. Screened Interval/open hole (bgs): 5.55 - 15.55
11. Well Casing: Diameter 4" Material: ☒PVC ☐Carbon Steel ☐Stainless Steel
12. Well Screen (or open hole diameter): Diameter 4" Material: ☒PVC ☐Carbon Steel ☐Stainless Steel
13. Screen Size (slot): Screen Slot Size 0.01

14. Date and Time of Deployment: Date: 9/20/15 Time: 1245
15. Depth to Ground Water: Depth to ground water at time of deployment 7.59
16. Date and Time of Retrieval: Date: 12/4/15 Time: 1120
17. Depth to Ground Water: Depth to ground water at time of retrieval 7.50
18. Type of Deployment Line Used: Diameter: 3/16" Material: poly

19. Material and Mass (oz.) of PDBS Weight: _____ (stainless steel recommended)
20. Type of PDBS Used:
    ☐Lab Filled (Modified Trip Blank must be taken at time of deployment)
    ☒Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____
22. Position of PDBS Weight:
    ☒Attached to bottom of PDBS and suspended in well
    ☐Attached to bottom of deployment line and suspended in well
    ☐Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS):
    1st PDBS 10.85 2nd PDBS _____ 3rd PDBS _____ 4th PDBS _____
    5th PDBS _____ 6th PDBS _____ 7th PDBS _____ 8th PDBS _____

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
    ☐No, this well is being profiled during this sampling round
    ☒Yes, this well was profiled already. Date when well was profiled: 8/28/13

25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
    ☐No, flow testing has not been conducted in this well
    ☐Yes, flow testing of this well was conducted. Date of testing: _____
    Type of flow meter used: _____
    Measurements taken every _____ feet [Please Attach Results]

26. Weather Conditions During Deployment: Temp. 76°F Wind SE 5-10mph ☐Sunny ☐Overcast ☒Raining ☐Snowing
27. Weather Conditions During Retrieval: Temp. _____ Wind _____ ☐Sunny ☐Overcast ☐Raining ☐Snowing

28. Field Sampling Technician Name(s) and Company (please print clearly)
    Name: A. DiLeo, C. Watson Company: PARSONS

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within the FTMM-53 site were gauged on November 16, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1.** Groundwater elevations in monitoring wells ranged from 11.99 (616MW01) to 6.13 (699MW01) feet above mean sea level (amsl) and the inferred groundwater flow direction is to the east-southeast (**Figure 2**).

During the groundwater gauging, the physical condition of FTMM-53 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater sampling was conducted at eight monitoring wells located in FTMM-53 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-53 is sampled on a quarterly basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells at FTMM-53 prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 699MW01, 699MW04, 699MW06, 699MW09, 699MW16, 699RW03, 699RW05, and 699RW11 on November 18, 2015, November 23, 2015 and November 25, 2015. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the SAP. Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From April 1997 through June 2010, FTMM-53 monitoring wells were sampled for VOCs and metals.

In the last four historical rounds of quarterly groundwater sampling conducted at FTMM-53 from June 2010 to June 2011, samples were submitted for VOCs and metals. Historically, several metals were detected in exceedance of both their NJDEP Ground Water Quality Standard (GWQS) and background concentrations established in the 1995 Weston Report, including beryllium, cadmium, iron, lead, manganese, nickel and sodium. However, these metals are attributed to background conditions and are not associated with historical site operations.

Historically, several VOCs have been found to exceed their respective NJDEP GWQS in FTMM-53 monitoring wells. These VOCs include benzene, tetrachloroethene (PCE),

trichloroethene (TCE), *tert*-butyl-alcohol (TBA), and tentatively identified compounds (TICs). Historical groundwater analytical results are presented in **Table 3**.

During the August 2013 Baseline Sampling Event, 14 monitoring wells were sampled for VOCs at FTMM-53. Benzene was detected above its NJDEP GWQS of 1 µg/L in monitoring wells 699MW06, 699RW03, 699RW05 and 699RW11. PCE (699MW16), 1,2,4-trimethylbenzene (699RW03, 699WR05), 1,3,5–trimethylbenzene (699RW05) and total xylenes (699RW05) were detected in exceedance of their respective NJDEP GWQS. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 6 out of the 14 groundwater monitoring wells were removed from the long-term monitoring (LTM) program including 616MW01, 699MW02, 699MW05, 699MW08, 699MW12, and 699MW15, and the remaining wells were to be sampled quarterly and analyzed for VOCs.

Groundwater sampling at FTMM-53 has been conducted on a quarterly basis for 2014 (in March, May, and September). These data have been presented in reports submitted quarterly to the NJDEP. LFPS and passive diffusion bag (PDB) methods were used in the first quarterly sampling event (March 2015) to confirm that MTBE was not present in the groundwater at the wells. Based on the absence of Methyl tert-butyl ether (MTBE) using LFPS, the PDB method was employed as the sampling method for FTMM-53.

Six VOCs (benzene, 1,2,4-trimethylbenzene 1,3,5-trimethylbenzene, xylenes, total VOC TICs and PCE) were detected above their NJDEP GWQS during the previous four 2014 quarterly sampling events. Benzene was detected above its GWQS of 1 µg/L in monitoring wells 699RW03 (3.5J µg/L - 4.8J µg/L), 699RW05 (1.9 µg/L - 7.2J µg/L), 699RW11 (2.4J µg/L - 11 µg/L), and 699MW06 (9.2 µg/L). 1,2,4-trimethylbenzene was detected above its GWQS of 100 µg/L in monitoring wells 699RW03 (110 µg/L - 130 µg/L) and 699WR05 (130 µg/L - 790 µg/L). 1,3,5-trimethylbenzene was detected above its GWQS of 100 µg/L in one monitoring well, 699RW05 (160 µg/L). Xylene (total) was detected above its GWQS of 1000 µg/L in monitoring well 699WR05 (2,410 µg/L). Total VOC TICs were detected above its GWQS of 500 µg/L at monitoring wells 699RW03 (813 µg/L) and 699RW05 (1,181JN - 2,338 µg/L). PCE was detected above its NJDEP GWQS of 1 µg/L in one monitoring well, 699MW16 (1.3J µg/L). The groundwater analytical data for the samples collected during the three 2015 quarterly events are presented in **Table 4**.

Based on the annual 2014 results, it was recommended that quarterly groundwater sampling continue at monitoring wells 699MW01, 699MW04, 699MW06, 699MW09, 699MW16, 699RW03, 699RW05, and 699RW11. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

Groundwater sampling at FTMM-53 has been conducted on a quarterly basis for 2015 (in March, May, and September). These data have been presented in reports submitted quarterly to the NJDEP. Six VOCs (benzene, 1,2,4-trimethylbenzene 1,3,5-trimethylbenzene, xylenes, total VOC TICs and PCE) were detected above their NJDEP GWQS during the first three 2015 quarterly sampling events. Benzene was detected above its GWQS of 1 µg/L in monitoring wells 699RW05 (1.2J µg/L - 2.8J µg/L), 699RW11 (3J µg/L - 7.1 µg/L), 699MW04 (2.4

µg/L), and 699MW06 (2.3 µg/L). 1,2,4-trimethylbenzene was detected above its GWQS of 100 µg/L in monitoring well 699WR05 (3.9J µg/L - 690 µg/L). 1,3,5-trimethylbenzene was detected above its GWQS of 100 µg/L in one monitoring well, 699RW05 (120 µg/L). Xylene (total) was detected above its GWQS of 1000 µg/L in monitoring well 699WR05 (1,330 µg/L). Total VOC TICs were detected above its GWQS of 500 µg/L at monitoring well 699RW05 (1,217JN - 2,062 µg/L). PCE was detected above its NJDEP GWQS of 1 µg/L in two monitoring wells, 699MW09 (1.1J µg/L) and 699MW16 (1.3J µg/L). The groundwater analytical data for the samples collected during the three 2015 quarterly events are presented in **Table 4**.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Several VOCs were detected in groundwater samples collected during this annual (fourth quarter) event conducted in December 2015. Benzene, 1,2,4-trimethylbenzene, PCE and estimated total TICs were the only VOCs detected in the groundwater at FTMM-53 above their respective NJDEP GWQS; and the exceedances occurred in four monitoring wells (699MW04, 699MW16, 699RW05, and 699RW11). Benzene (2.5J µg/L), 1,2,4-trimethylbenzene (290 µg/L), and total TICs (1,200JN µg/L) were detected above their GWQS of 1 µg/L, 100 µg/L and 500 µg/L, respectively, at monitoring well 699RW05. Benzene was detected at wells 699MW04 (1.6J µg/L) and 699RW11 (3.3J µg/L) above the GWQS of 1 µg/L. PCE was detected at 699MW16 at an estimated concentration of 1.3J µg/L above the GWQS of 1 µg/L. Groundwater analytical detections from samples collected during the 2015 annual (fourth quarter) groundwater sampling event are presented in **Table 4**. Constituents detected in the groundwater above the NJDEP GWQS during the 2015 quarterly sampling events are shown on **Figures 3** through **6.**

5.0 FINDINGS AND RECOMMENDATIONS

VOCs (benzene, 1,2,4-trimethylbenzene 1,3,5-trimethylbenzene, xylenes, total VOC TICs and PCE) were detected above their NJDEP GWQS at least once during the 2015 quarterly sampling events. Benzene continues to be detected at monitoring wells 699MW04, 699MW06, 699RW05 and 699RW11 in exceedance of the NJDEP GWQS of 1 µg/L. 1,2,4-trimethylbenzene concentrations have been detected at monitoring well 699RW05 during the 2015 quarterly sampling events with exceedances occurring in the first, third and the fourth quarters. 1,3,5-trimethylbenzene concentrations have been detected at monitoring well 699RW05 during this quarterly sampling with an exceedance occurring in November 2015. Concentrations of PCE continue to fluctuate near the NJDEP GWQS of 1 µg/L at 699MW09 and 699MW16 which are both near Building 700 (also known as FTMM-68 the location of a documented PCE release to the subsurface).

As discussed previously (refer to Section 2.1.4 of the main body of text), the LTM program for groundwater at FTMM-53 will be temporarily suspended beginning in the first quarter of 2016 as agreed to by the NJDEP in their March 16, 2016 letter. Once the RI/FS is completed and a remedy has been accepted by the NJDEP, a revised LTM program for the groundwater will be submitted for FTMM-53.

A review of historical groundwater sampling results is presented **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on November 16, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Table 3
Groundwater Analytical Results - 2013, 2014 and 2015
FTMM-53 Former Gas Station at Building 699
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-53 Former Gas Station at Building 699
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2015 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify Compound)[1]	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-53, B699									
699MW01	VOC	No	N/A	No	No	No	No	Yes	LTM temporarily suspended as agreed by NJDEP in March 2016 letter. Once RI/FS completed and remedy accepted, revised LTM program will be submitted.
699MW04		Benzene	N/A	No	No	No	No	Yes	
699MW06		Benzene	N/A	No	No	Yes	No	Yes	
699MW09		Tetrachloroethene	N/A	No	No	No	No	Yes	
699MW16		PCE	N/A	No	No	No	No	Yes	
699RW03		1,2,4-trimethylbezene, benzene, TICs	N/A	No	No	Yes	No	Yes	
699RW05		1,2,4-trimethylbezene, 1,3,5-trimethylbenzene, benzene, xylenes, TICs	N/A	No	No	Yes	No	Yes	
699RW11		Benzene	N/A	No	No	Yes	No	Yes	

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. PCE - tetrachloroethene
4. TICs - Tentatively identified compounds
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 616MW01, 699MW02, 699MW05, 699MW08, 699MW12, and 699MW15 were removed from the long-term monitoring sampling program.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-56 were gauged on October 7, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 2.73 (80MW01) to 4.46 (80MW05) feet above mean sea level (amsl). Although the hydraulic gradient is generally flat, the inferred shallow groundwater flow direction is to the north towards Oceanport Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-56 monitoring wells were assessed. The site monitoring wells were found to be in good condition, however 80MW04 was not located during this gauging event.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells (80MW02 and 80MW05) located at FTMM-56 as part of the annual (fourth quarter) 2015 groundwater sampling event. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 80MW02 and 80MW05 on November 20, 2015. The groundwater sample from 80MW05 was analyzed for only lead, arsenic and cadmium using United States Environmental Protection Agency (USEPA) Method SW6010C/SW7470A. Groundwater from monitoring well 80MW02 was analyzed for only pesticides using USEPA method 8081B.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP).

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From April 1997 through September 2004, FTMM-56 monitoring wells were sampled primarily for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and metals. From November 2004 to June 2010, FTMM-56 wells were sampled for pesticides, PCBs and metals.

Within the last four rounds of historical quarterly groundwater sampling conducted at FTMM-56, from August 2010 to August 2011, monitoring wells were also sampled for pesticides, PCBs and metals. Historically, several metals including antimony, arsenic, beryllium, cadmium, chromium and lead were detected at concentrations greater than their respective NJDEP Ground Water Quality Standard (GWQS). Arsenic, beryllium, cadmium, chromium and lead were detected in FTMM-56 monitoring well 80MW05 in August 2011. However, with the exception of lead, these concentrations were below the background groundwater concentrations established in the 1995 Weston Report.

Chlordane was detected in 80MW02 above its NJDEP GWQS of 0.1 µg/L in March 2011. Historical groundwater analytical results are presented in **Table 2.**

Groundwater samples collected from six monitoring wells during the August 2013 baseline sampling event were analyzed for lead only. Lead was not detected above its NJDEP GWQS of µg/L in the samples collected from FTMM-56 monitoring wells. Groundwater analytical detections from samples collected during the August 2013 Baseline Sampling Event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was approved by the NJDEP in their February 5, 2015 letter. Based on this approval, four monitoring wells out of the six monitoring wells were removed from the long term monitoring program including 116MW01, 80MW01, 80MW03 and 80MW04. Furthermore, the NJDEP approved one additional round of groundwater monitoring at 80MW02 (pesticides) and 80MW05 (arsenic, cadmium and lead) and then discontinuing the long-term monitoring (LTM) program. FTMM-56 was not sampled in 2014 due to an oversight.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Arsenic was the only metal detected slightly above its NJDEP GWQS of 3 µg/L at an estimated concentration of 3.7 Jµg/L at 80MW05. However, this concentration is significantly below the background concentration (Weston, 1995) for arsenic of 89.3 µg/L. Lead and cadmium were not detected above their respective NJDEP GWQS in the sample collected from monitoring well 80MW05. Pesticides were not detected above their respective NJDEP GWQS in the sample collected from monitoring well 80MW02 Groundwater analytical detections from samples collected during the annual (fourth quarter) 2015 groundwater sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Groundwater analytical results for lead and cadmium were not detected above NJDEP GWQS during the annual (fourth quarter) 2015 groundwater sampling event and the 2013 baseline sampling event at 80MW05. Although arsenic was detected slightly above the NJDEP GWQS it was not detected above background concentrations (Weston 1995) during the annual (fourth quarter) 2015 groundwater sampling event at 80MW05. Additionally, chlordane was not detected above the NJDEP GWQS at 80MW02 in 2015 and 2011. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses. Based on the collective groundwater analytical results, it is recommended that groundwater monitoring be discontinued at FTMM-56 and a no further action will be requested for groundwater at this site

Notes:
1) The synoptic round of water levels in the wells was collected on October 7, 2015. Well 80MW04 was not located this round.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result
Sampling for VOCs and SVOCs were discontinued after the 9/3/04 sampling event as per NJDEP approval letter dated 11/2004
(1) Low-flow sampling method used to collect sample
Sampling for Volatiles and Semi-volatiles was discontinued in November 2004 as per NJDEP approval dated (11/10/04)

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result
Sampling for VOCs and SVOCs were discontinued after the 9/3/04 sampling event as per NJDEP approval letter dated 11/2004
(1) Low-flow sampling method used to collect sample
Sampling for Volatiles and Semi-volatiles was discontinued in November 2004 as per NJDEP approval dated (11/10/04)

Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.
5) Bold chemical detection

6) Chemical result qualifiers are assigned by the laboratory and are evaluated and modified (if necessary) during the data validation.

[blank] = detect, i.e. detected chemical result value.

B = Compound detected in the sample at a concentration less than or equal to 5 times (10 times for common lab contaminants) the blank concentration.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected at or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.

J = estimated detected value due to a concentration below the reporting limit or due to discrepancies in meeting certain analyte-specific quality control.
E (or ER) = Estimated result.

D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

7) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2015-05 MCL. ###

8) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2015-06 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=0.1) - 5/31/2015 (Last revised)
  NA

9) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

FTMM-56, B80/166									
80MW02	Pesticides	No	N/A	No	No	No	No	No	Gamma chlordane has been less than NJDEP GWQS for two annual rounds (8/2011 and 12/2015).
80MW05	Pb, As, Cd	As	No	No	No	No	No	No	As is only slightly above NDJEP GWQS and is below background conditions.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. N/A - Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 116MW01, 80MW01, 80MW03 and 80MW04 were removed from the long-term monitoring sampling program. Furthermore, the NJDEP approved the one additional round of groundwater monitoring at 80MW02 and 80MW05.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-57 were gauged on October 2, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 3.61 (108MW03) to 8.76 (108MW01) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the southeast towards Oceanport Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-57 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

A groundwater sample was collected from one monitoring well (108MW04) located at FTMM-57 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-57 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). The groundwater sample was collected from well 108MW04 on November 20, 2015 and analyzed for lead via USEPA Method SW6010C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP).

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

The historical quarterly groundwater sampling events conducted at FTMM-57 consisted solely of metals analysis. During the historical events, several metals including aluminum, arsenic, beryllium, chromium, iron, lead, manganese, mercury and sodium were detected in exceedance of the NJDEP Ground Water Quality Standard (GWQS). However, sodium, manganese, mercury and lead were the only metals to exceed their individual background concentration established in the 1995 Weston Report. Sodium and manganese are attributed to background conditions that typically contribute to elevated metal concentrations in groundwater, such as the glauconitic soils that underlie the site. Lead was found in exceedance of its background concentration (Weston, 1995) in site monitoring well 108MW04 during the February and August 2011 groundwater monitoring events. Lead is potentially associated with historical site operations.

Mercury exceeded its NJDEP GWQS and background concentration (Weston, 1995) in November 2010. Prior to and since this exceedance, mercury has not been detected in excess of its NJDEP GWQS. The November 2010 mercury exceedance is anomalous. Historical groundwater analytical results are presented in **Table 2**.

Aluminum, arsenic, iron, manganese and sodium were detected above their respective NJDEP GWQS. Of these metals, only manganese and sodium were the detected at concentrations greater than their background concentrations (Weston, 1995). However, manganese and sodium are found naturally in the glauconitic soil underlying the Site and are considered background conditions and not associated with historical site uses. No volatile organic compounds (VOCs) or pesticides were detected above their NJDEP GWQS.

During the August 2013 Baseline Sampling Event, four monitoring wells were sampled for VOCs plus tentatively identified VOCs, pesticides and metals. No VOCs or pesticides were detected above the NJDEP GWQS. Metals detected above the NJDEP GWQS at the four wells were attributed to site background conditions. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, three out of the four groundwater monitoring wells were removed from the long-term monitoring (LTM) program including: 108MW01, 108MW02 and 108MW03; and VOCs, pesticides and metals analysis were discontinued with the exception of lead.

Lead was not detected at monitoring well 108MW04 during the annual (fourth quarter) 2014 sampling event. Based on the collective data, the Annual (Fourth Quarter) 2014 Groundwater Sampling Report recommended that one additional sampling round at 108MW04 for lead be conducted to confirm the absence of lead above the NJDEP GWQS, and to support the termination of long-term monitoring at FTMM-57. This recommendation was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

The lead concentration detected in the groundwater sample from 108MW04 was non-detect above the method detection limit of 2.5 µg/L which is below the NJDEP GWQS of 5 µg/L during the annual (fourth quarter) 2015 sampling event.

5.0 FINDINGS AND RECOMMENDATIONS

Historically, well 108MW04 contained lead concentrations (ranging from non-detect to 101 µg/L) above the NJDEP GWQS of 5 µg/L and its background concentration (Weston, 1995), however, lead was not detected above the method detection limit during the August 2013, 2014 and 2015 sampling events in this well. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses. Based on the collective groundwater sampling results, it is recommended that groundwater sampling at FTMM-57 be discontinued and a no further action determination will be requested for groundwater at this site.

Table 3
Groundwater Analytical Results - 2013, 2014, 2015
Site FTMM-57 Building 108 UST Gasoline Release
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###

n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.

Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
  NA

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results

Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2015 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-57, B108									
108MW04	Pb	No	No	No	No	N/A	No	No	Pb not detected in 2015, 2014 or 2013 sampling events. Discontinue sampling.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. N/A - Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 108MW01, 108MW02 and 108MW03; were removed from the long- term monitoring sampling program and VOCs, pesticides and metals analysis were discontinued in 2014 with the exception of lead.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-58 were gauged on October 7, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 26.53 (2567MW05) to 30.32 (2567MW02) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the southeast, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-58 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells (2567MW01 and 2567MW03) located at FTMM-58 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-58 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 2567MW01 and 2567MW03 on November 25, 2015. The groundwater samples were analyzed for only tert-butyl alcohol (TBA) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

Groundwater monitoring has been conducted at FTMM-58 beginning in April 1997. Groundwater monitoring has consisted of sampling for select VOCs, semi-volatile organic compounds (SVOCs), and metals. The four most recent historical quarterly groundwater sampling events consisted of sampling for VOCs and metals.

Tert-butyl alcohol (TBA) was detected in FTMM-58 monitoring well 2567MW01 above the NJDEP Ground Water Quality Standards (GWQS) in March and June 2010, but was not detected in the subsequent groundwater sampling event conducted in September 2010. TBA was also detected in 2567MW03 at a concentration of 486.99 µg/L in September 2010. The NJDEP GWQS for TBA is 100 µg/L.

The November 2011 Remedial Action Progress Report for FTMM-58 prepared by CALIBRE Systems, Inc. stated that in an effort to reduce the TBA exceedances exhibited in monitoring wells 2567MW01 and 2567MW03, *in-situ* chemical oxidation injections would be performed in this area. Three injections of RegenOx®/ORC Advanced™ were conducted between

November 2010 and June 2011 under an approved NJDEP Permit by Rule letter dated October 28, 2010.

Antimony was detected in monitoring wells 2567MW01, 2567MW02, 2567MW03, 2567MW04 and 2567MW05 above the NJDEP GWQS in at least one of the last four historical sampling rounds. Lead was also detected above the NJDEP GWQS in the September and June 2010 sampling events. Both antimony and lead were well below the background conditions for each compound and are not related to former site operations. Historical groundwater analytical data are presented in **Table 2**.

During the August 2013 Baseline Sampling Event, seven monitoring wells were sampled for VOCs. No VOCs were detected above their respective NJDEP GWQS during August 2013 sampling event. Results of the August 2013 sampling event are presented in **Table 3.**

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, five out of the seven groundwater monitoring wells were removed from the long term monitoring (LTM) program including 2567MW02, 2567MW04, 2567MW05, 2567MW06 and 2567MW07. Also, the volatile organic compound list was reduced to TBA only.

During the 2014 sampling event, TBA was detected in only monitoring well 2567MW01, at a concentration of 260 µg/L which is above the NJDEP GWQS of 100 µg/L. Groundwater analytical results from samples collected during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**.

Based on the annual 2014 results, it was recommended that annual groundwater sampling continue at monitoring wells 2567MW01 and 2567MW03 for TBA. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

TBA was detected in only monitoring well 2567MW01, at a concentration of 240 µg/L which is above the NJDEP GWQS of 100 µg/L. Groundwater analytical results from samples collected during the annual (fourth quarter) 2015 groundwater sampling event are presented in **Table 3**. Constituents detected in the groundwater above the NJDEP GWQS during the 2015 Sampling Event are shown on **Figure 3.**

5.0 FINDINGS AND RECOMMENDATIONS

Overall, concentrations of TBA detected at monitoring well 2567MW01 have been decreasing from a high of 829.45 µg/L (June 2010) to 240 µg/L (November 2015); concentrations remain above the NJDEP GWQS (100 µg/L). Concentrations of TBA detected at monitoring well 2567MW03 have fluctuated and have ranged from 486.99 µg/L in September 2010 to non-detect in December 2014 and November 2015 annual sampling events. Based on the collective groundwater analytical results, continued groundwater monitoring for TBA in 2567MW01 is recommended as well as the addition of down gradient well 2567MW05. Only one additional round of groundwater sampling at monitoring well 2567MW03 is recommended to confirm

that TBA is below the NJDEP GWQS. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on October 7, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Site FTMM-58 Building 2567 UST Gasoline
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###

n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.

Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
  NA

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Review of Historical Groundwater Sampling Results
Site FTMM-58 Building 2567 UST Gasoline
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2015 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-58, B2567									
2567MW01	VOC	TBA	N/A	N/A	N/A	N/A	NO	Yes	
2567MW03		NO	N/A	N/A	N/A	N/A	NO	Yes	Well will be analyzed for TBA for one additional round to confirm presence or lack of contaminant.
2567MW05		NO	N/A	N/A	N/A	N/A	Yes	Yes	Well will be retained as a downgradient well.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. TBA - Tert-butyl-alcohol
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 2567MW02, 2567MW04, 2567MW05, 2567MW06 and 2567MW07 were removed from the long-term monitoring sampling program and the volatile organic compound list has been reduced to TBA only.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-64 were gauged on October 7, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 17.51 (812MW04) to 8.17 (812MW10) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow direction is generally to the northeast. **Figure 2** shows the shallow groundwater flow direction; groundwater contours were not drawn for the deep groundwater.

During the groundwater gauging, the physical condition of FTMM-64 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

One groundwater sample was collected from monitoring well 812MW04 located at FTMM-64 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-64 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of a groundwater sample using low-flow purging and sampling (LFPS). The groundwater sample was collected on November 25, 2015. The groundwater sample was analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

This sample was collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From February 2008 through July 2011, FTMM-64 monitoring wells were sampled for volatile organic compounds (VOCs) and metals.

In the last four historical groundwater sampling events conducted at FTMM-64 from November 2010 to July 2011, samples were submitted for VOCs and metals. Monitoring wells within FTMM-64 were sampled on a staggered quarterly basis during this period. Within the last four events of groundwater sampling at FTMM-64, aluminum, antimony, arsenic, beryllium, cadmium, iron, lead, manganese and sodium were detected above their respective NJDEP Ground Water Quality Standard (GWQS). However, only sodium, manganese, and cadmium were detected above the background concentrations (Weston, 1995). Monitoring wells 812MW04, 812MW05, 812MW06 812MW07, 812MW08, and 812MW14 contained detections of sodium above the background concentration of 21,500 µg/l (Weston, 1995). Monitoring wells 812MW05 (419 - 32 µg/L), 812MW07 (374 - 771 µg/L), and 812MW08 (348 µg/L) contained detections of manganese above the background concentration of 331 µg/l

(Weston, 1995). Cadmium was detected in 812MW08 (10.6 - 54 µg/L) above the background concentration of 9.5 µg/L (Weston, 1995).

In the last four historical quarterly groundwater sampling events, vinyl chloride (1.05 - 4.9 µg/L) has historically been detected in 812MW04 above the NJDEP GWQS of 1 µg/L. Historical groundwater analytical results are presented in **Table 2**.

During the August 2013 baseline sampling event, eight monitoring wells were sampled for VOCs and lead. Lead was detected in monitoring well 812MW04 at a concentration of 7.5 µg/L, above the NJDEP GWQS of 5 µg/L. However, this result is below the background concentration of 22.7 µg/L for lead (Weston, 1995). Concentrations of VOCs were non-detect during the August 2013 baseline groundwater sampling event. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3.**

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, seven out of the eight groundwater monitoring wells were removed from the long term monitoring (LTM) program including: 812MW01, 812MW02, 812MW05, 812MW06, 812MW07, 812MW08 and 812MW14; lead analysis was discontinued.

During the annual (fourth quarter) 2014 sampling event vinyl chloride was the only VOC detected in monitoring well 812MW04 at a concentration of 7.8 µg/L, above the NJDEP GWQS of 1 µg/L. Groundwater analytical results for this well are presented in **Table 3**. Based on the annual (fourth quarter) 2014 results, it was recommended that annual groundwater sampling continue at monitoring well 812MW04. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Acetone, common laboratory contaminate was the only VOC detected in monitoring well 812MW04; andwas also detected in the blank for this sample set, therefore it is not representative of site conditions. Groundwater analytical results for this well are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Vinyl chloride has previously been detected in well 812MW04 at concentrations above the NJDEP GWQS of 1 µg/L, however, it was non-detect during the 2015 Annual Sampling Event. While vinyl chloride concentrations appear to be decreasing based on the historical data, concentrations remain variable during the previous six sampling events (e.g., last four quarterly and two annual events) in this well. Vinyl chloride concentrations during this period ranged from 1.05 µg/L (April 2011) to 7.8 µg/L (October 2014). Based on the collective groundwater analytical results, annual groundwater monitoring for VOCs will continue for well 812MW04. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on October 7, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling
12) -- = Unable to locate monitoring well 812MW12

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###

n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.

Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
  NA

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2014 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-64,B812									
812MW04	VOC	VC	N/A	No	No	Yes	No	Yes	VC was found above GWQS in 2014. VOCs will continue to be monitored.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. VC - vinyl chloride
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 812MW01, 812MW02, 812MW05, 812MW06, 812MW07, 812MW08 and 812MW14, were removed from the long-term monitoring sampling program and lead was discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-66 were gauged on October 2, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 5.35 (886MW01) to 9.48 (886RW06) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the north-northwest, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-66 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from three monitoring wells located at FTMM-66 as part of the annual (fourth quarter) 2015 groundwater sampling event. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 886RW01, 886RW06 and 886RW08 on November 20 and 23, 2015. Groundwater samples were analyzed for Target Compound List (TCL) semi-volatile organic compounds (SVOCs) plus Tentatively Identified Compounds (TICs) via USEPA method SW8270D.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From February 2003 through October 2004, FTMM-66 monitoring wells were sampled for volatile organic compounds (VOCs), SVOCs, total petroleum hydrocarbons (TPH) and metals. From January 2005 to December 2009, FTMM-66 wells were sampled for VOCs and SVOCs. From February 2010 to May 2010, monitoring wells were sampled for VOCs, SVOCs and metals.

In the last four rounds of quarterly groundwater sampling conducted at FTMM-66 from August 2010 to April 2011, samples were also analyzed for VOCs, SVOCs and metals. Within the last four rounds of groundwater sampling at FTMM-66, bis(2-ethylhexyl) phthalate, antimony, arsenic, beryllium and lead were detected above their respective NJDEP Ground Water Quality Standard (GWQS) in monitoring well 886MW01. The bis(2-ethylhexyl) phthalate detections appear to be anomalous as there is no historical trend of bis(2-ethylhexyl) phthalate detections above the GWQS. The detection of phthalates is attributed to the laboratory; it is considered a common laboratory contaminant since it is present in all

laboratory equipment and reagents. The concentrations of antimony, arsenic, beryllium and lead were all below site background conditions (Weston, 1995).

No VOCs or SVOCs were detected in exceedance of any NJDEP GWQS within the last four rounds of historical groundwater sampling. Historical groundwater analytical results are presented in **Table 2**.

During the August 2013 Baseline Sampling Event, thirteen monitoring wells were sampled for VOCs, SVOCs and lead. One parameter, SVOC total tentatively identified compounds (TICs) was detected above its NJDEP GWQS of 500 µg/L at monitoring wells 886RW01 (879 µg/L) and 886RW08 (707 JN µg/L). Groundwater analytical results from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 10 out of the 13 groundwater monitoring wells were removed from the long-term monitoring (LTM) program including 886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW02, 886RW03, 886RW04, 886RW05 and 886RW07; and VOC and lead analyses were discontinued.

SVOC total TICs was the only parameter detected in monitoring wells 886RW01 and 886RW08 during the 2014 annual sampling event. Concentrations (15.4J µg/L and 46.4J µg/L respectively) were below the NJDEP GWQS of 500 µg/L. SVOCs were non-detect in the sample collected from 886RW06. Groundwater analytical results from 2014 sampling event are presented in **Table 3**. Based on the collective data, the Annual (Fourth Quarter) 2014 Groundwater Sampling Report recommended that one additional sampling round was needed to demonstrate that SVOC total TICs are below the NJDEP GWQS and discontinue the long-term monitoring program for the site. This was accepted by the NJDEP in their January 26, 2016 letter.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

SVOC total TICs were only detected in monitoring well 886RW01 during the 2015 Annual Sampling Event. The estimated concentration (18JN µg/L) is below the NJDEP GWQS of 500 µg/L. SVOCs were non-detect in the samples collected from 886RW06 and 886RW08. Groundwater analytical results from 2015 sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Historically, SVOCs (including total TICs) have been detected below the NJDEP GWQS with only a few instances in 2009 and 2010 where bis(2-ethylhexyl)phthalate and total TICs have been above the GWQS. Concentrations of SVOCs (including total TICs) detected during the 2014 and 2015 sampling events were non-detect or below their NJDEP GWQS in wells 886RW01, 886RW06 and 886RW08. Based on the available data, it is recommended to discontinue the LTM sampling s at 886RW01, 886RW06 and 886RW08 and a no further action determination will be requested for groundwater at this site. A review of the historical groundwater sampling results is presented in **Table 4,** which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on October 2, 2015.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)
U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
ER - Estimated result
J - Estimated concentration exceeds the MDL and is less than the RL
NA - Not analyzed NR - Not reported
ND - Not detected
NLE - No limit established
a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)
U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
ER - Estimated result
J - Estimated concentration exceeds the MDL and is less than the RL
NA - Not analyzed NR - Not reported
ND - Not detected
NLE - No limit established
a/ Elevated sample detection limit due to difficult sample matrix.

Groundwater Analytical Results - 2013, 2014 and 2015
Site FTMM-66 Building 886 Former AST
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###

n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.

Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
  NA

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

FTMM-66, B886									
886RW01	SVOC	SVOC Total TICs	No	No	No	No	No	Yes	Metals and VOCs discontinued in 2013. Groundwater sampling results are below NJDEP GWQS, discontinue sampling.
886RW06		As, Pb	No	N/A	N/A	N/A	Yes	Yes	Metals and VOCs discontinued in 2013. Groundwater sampling results are below NJDEP GWQS, discontinue sampling.
886RW08		SVOC Total TICs	No	No	No	No	No	Yes	Metals and VOCs discontinued in 2013. Groundwater sampling results are below NJDEP GWQS, discontinue sampling.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. TIC - Tentatively Identified Compound
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW02, 886RW03, 886RW04, 886RW05 and 886RW07 were removed from the long-term monitoring sampling program and VOC and lead analysis were discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-68 were gauged on November 15, 2015. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 6.33 (FTMM-68-MW02) to 8.87 (565MW01) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the east-southeast, toward Husky Brook, as shown in **Figure 2**. In order to develop a better understanding of groundwater flow, new wells installed at both FTMM-53 and FTMM-68 as part of the remedial investigations were used to develop the contour plan.

Additionally, monitoring wells were inspected for their physical condition during the groundwater gauging. FTMM-68 monitoring wells were found to be in good condition upon inspection.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells located within FTMM-68 as part of the annual (fourth quarter) 2015 groundwater sampling event. FTMM-68 is sampled on a quarterly basis. The groundwater sampling program included measuring the depth to groundwater in the two FTMM-68 monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 65MW01 and 565MW01D on November 16, 2015 and November 17, 2015. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

The groundwater sampling event conducted in August 2013 was the initial sampling event for monitoring wells 565MW01 and 565MW01D since they were installed.

Groundwater analytical results from samples collected from the two wells for VOC analysis during the August 2013 sampling event are presented in **Table 2**. The compounds cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride (VC) were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS) in monitoring well 565MW01 at FTMM-68. Additionally, PCE and TCE were detected above their respective NJDEP GWQS in 565MW01D.

Groundwater sampling at FTMM-68 has been conducted on a quarterly basis for 2014 (in March, May, September and December). This data has been presented in reports submitted quarterly to the NJDEP. In the 2014 quarterly groundwater sampling events, 1,1-dichloroethene (1,1 DCE), cis-1,2-DCE, PCE, TCE, and VC were detected above their respective NJDEP GWQS in monitoring well 565MW01. 1,1 DCE was detected above its GWQS (1 µg/L) at concentrations ranging from 2 µg/L to 3.2J µg/L. Cis-1,2-DCE was detected above its GWQS (70 µg/L) at concentrations ranging from 110 µg/L to 270 µg/L. PCE was detected above its GWQS (1 µg/L) at concentrations ranging from 180 µg/L to 700 µg/L. TCE was detected above its GWQS (1 µg/L) at concentrations ranging from 86 µg/L to 230 µg/L. VC was detected above its GWQS (1 µg/L) at concentrations ranging from 1.3J µg/L to 18 µg/L.

Additionally, cis-1,2-DCE, PCE, TCE and VC were detected in 565MW01D above their respective NJDEP GWQS. Cis-1,2-DCE was detected above its GWQS (70µg/L) at concentrations ranging from 120 µg/L to 140 µg/L. PCE was detected above its GWQS (1 µg/L) at concentrations ranging from 1,500 µg/L to 4,800 µg/L. TCE was detected above its GWQS of (1 µg/L) at concentrations ranging from 18J µg/L to 110 µg/L. VC was detected above its GWQS (1 µg/L) at concentrations ranging from 5.5 µg/L to 6.1J µg/L.

Groundwater sampling at FTMM-68 has been conducted on a quarterly basis for 2015, in March, May, and September. This data has been presented in reports submitted quarterly to the NJDEP. In the 2014 quarterly groundwater sampling events, 1,1 DCE, cis-1,2-DCE, PCE, TCE, and VC were detected above their respective NJDEP GWQS in monitoring well 565MW01. 1,1 DCE was detected above its GWQS (1 µg/L) at concentrations ranging from 1.9h µg/L to 7J µg/L. Cis-1,2-DCE was detected above its GWQS (70 µg/L) at concentrations ranging from 130 µg/L to 600 µg/L. PCE was detected above its GWQS (1 µg/L) at concentrations ranging from 94 µg/L to 1,300 µg/L. TCE was detected above its GWQS (1 µg/L) at concentrations ranging from 25 µg/L to 550 µg/L. VC was detected above its GWQS (1 µg/L) at concentrations ranging from 1.7J µg/L to 53 µg/L.

Additionally, PCE, TCE and VC were detected in 565MW01D above their respective NJDEP GWQS. PCE was detected above its GWQS (1 µg/L) at concentrations ranging from 860 µg/L to 3,600 µg/L. TCE was detected above its GWQS of (1 µg/L) at concentrations ranging from 19J µg/L to 45 µg/L. VC was detected above its GWQS (1 µg/L) at a concentration of 2.5J µg/L.Based on the annual 2014 results, it was recommended that quarterly groundwater sampling continue at monitoring wells 565MW01 and 565MW01D. The Annual (Fourth Quarter) 2014 Groundwater Sampling Report was accepted by the NJDEP in their January 26, 2016 letter. In addition, the NJDEP has requested to add CW1MW40 to the long-term monitoring (LTM) plan.

4.0 ANNUAL (FOURTH QUARTER) 2015 GROUNDWATER RESULTS

Four chlorinated VOCs (cis-1,2-DCE, PCE, TCE, and VC) were detected in groundwater samples collected from the two wells during the 2015 annual (fourth quarter) sampling event at concentrations above their respective NJDEP GWQS of 70 µg/L, 1 µg/L, 1 µg/L and 1 µg/L. Cis-1,2-DCE (76 µg/L), PCE (220 µg/L) TCE (62 µg/L), and VC (4.6J µg/L) were detected at well 565MW01. PCE and TCE were detected at concentrations of 3,800 µg/L and

15J µg/L at monitoring well 565MW01D. Groundwater analytical results for the annual (fourth quarter) 2015 groundwater sampling event is presented in **Table 2**. Constituents detected in the groundwater above the NJDEP GWQS for the 2015 quarterly sampling events are shown on **Figures 3** through **6.**

5.0 FINDINGS AND RECOMMENDATIONS

Concentrations of five VOCs (1,1-DCE, cis-1,2-DCE, TCE, PCE and VC) were detected above their NJDEP GWQS at least once during the 2015 quarterly sampling events. 1,1-DCE concentrations have been detected at well 565MW01 during the quarterly sampling with exceedences occurring in second and third quarter of 2015. Cis-1,2-DCE and VC concentrations have been detected above their NJDEP GWQS in the last three quarters of 2015 at well 565MW01. TCE and PCE were detected above the NJDEP GWQS in all four quarters of 2015 at both wells. The detection of PCE degradation byproducts (e.g. TCE, 1,1 DCE, cis-1,2 DCE and vinyl chloride) indicates that natural attenuation is taking place at both of the wells.

As discussed previously (refer to Section 2.1.4 of the main body of text), the LTM program for groundwater at FTMM-68 will be temporarily suspended beginning in the first quarter of 2016 as agreed to by the NJDEP in their March 16, 2016 letter. Once the RI/FS is completed and a remedy has been accepted by the NJDEP, a revised LTM program for the groundwater will be submitted for FTMM-68.

A review of the historical groundwater sampling results is presented in **Table 3**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on November 15, 2015
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Fort Monmouth, New Jersey

Footnote:

1) All historical data collected prior to 2013 are reported as provided by others.

2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.

3) NLE = no limit established.

4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.

- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.

- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the most recent fourth quarter sampling event are highlighted in yellow. Sample ID

Table 3
Review of Historical Groundwater Sampling Results
Site FTMM-68 Former Dry Cleaners UST at Building 700
Annual (Fourth Quarter) 2015 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2015 Results [1]			2015 Evaluation				Retain Analyte/ Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-68, B700									
565MW01	VOC	1,1 DCE, cis-1,2-DCE, PCE, TCE, VC	N/A	No	No	Yes	Yes	Yes	VOCs were detected in the 2014 quarterly events. LTM temporarily suspended as agreed by NJDEP (March 2016);once RI/FS completed and remedy accepted, revised LTM will be submitted.
565MW01D		Cis-1,2-DCE, PCE, TCE, Cis-1,2-DCE, VC	N/A	No	No	Yes	Yes	Yes	

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2015 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. 1,1 DCE = 1,1-Dichloroethene
4. cis-1,2-DCE = cis-1,2-dichloroethene
5. PCE = tetrachloroethene
6. TCE = trichloroethene
7. VC = vinyl chloride

DATA VALIDATION MEMORANDUM

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: January 19, 2016

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on October 1 and December 14, 2015 as part of the 4th GW Quarterly event for 2015. Samples were logged in under the following Sample Delivery Groups (SDGs):

R150298, R1511019

The samples in this SDG were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs). The field QC samples collected included a trip blank (TB) sample, field blank, distilled water blank, a field duplicate (FD) sample and a matrix spike/matrix spike duplicate (MS/MSD) pair. The following table details the samples included in this SDG and the associated parameters.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. The coolers shipped and they were received by the laboratory at temperatures slightly below the 2-6°C range recommended by the project-specific UFP-QAPP. Since none of the water samples showed signs of freezing, sample integrity was not compromised.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

SAMPLE IDs AND REQUESTED PARAMETERS

FTMM-22-GW-CW1MW37-11.78	R1511019-015	Water	12/14/2015	VOCs	

W = Water

***** - TB-2015-12-14 was included in the same cooler as the samples listed in R1511019 above; although logged in under WO R1510911. All VOC analytes results were non-detect to the MDLs for the TB sample.

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5030	8260C	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A "Level IV" validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for water, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion of this SDG consisted of the samples listed in the table above, including one (1) field duplicate, (1) trip blank, one (1) field blank, one (1) distilled water blank, one (1) MS and one (1) MSD sample. The samples were collected on October 1, and December 14, 2015 and were analyzed for the full list of VOCs plus TICs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method. There were no TICs reported in any of the samples.

All analyses were performed undiluted, except as follows:

FTMM-22-GW-CW1MW28-33.74 was analyzed at 2.5x for trichloroethene only.

Accuracy

Accuracy was evaluated using the percent recovery obtained from LCSs, MS and MSD samples, and the surrogate spikes. Sample FTMM-5-GW-M5M11-9.46 was selected on the COC for MS/MSD purposes.

All LCSs and surrogate recoveries were within acceptance criteria.

All MS/MSD RPDs were within acceptance criteria, except as follows:

Analyte	MS %R	MSD %R	Criteria
Acetone	(140)	145	40-140

( ) = indicated criteria was met

No action was required since the Acetone recovery was within limits for the MS and only slightly high in the MSD sample.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte results. Sample FTMM-5-GW-M5MW111-9.46 was collected as the field duplicate of FTMM-5-GW-M5MW11-9.46.

All MS/MSD RPDs were within acceptance criteria.

There were no target VOCs detect above the Limit of Quantitation (LOQ) in either the parent or FD samples; therefore precision could not be evaluated.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- GC/MS tuning criteria for BFB were within QC criteria for all batches.
- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

Three method blanks, one trip blank, one field blank and one distilled water blank were analyzed for VOCs. The method blanks reported 1,2,4-trichlorobenzene and naphthalene at concentrations less than one-half the LOQs, therefore no corrective action was required, as per the project-specific UFP-QAPP. The trip blank was non-detect at the LOD for all analytes except chloromethane was reported at 0.26 µg/L (LOW 5.0 µg/L). No action was required since there were no chloromethane detections in the associated samples.

Acetone was detected in FTMM-FB-20151001 and FTMM-DI-20151001 at 1.6 ug/L and 1.3 ug/L, respectively.

The following samples required adding a “B” flag to the acetone results due to the detections in the FB and DI blank samples. If the associated samples were non-detect, or had concentrations greater than 5x that found in the EB, no qualifying was required.

FTMM-5-GW-M5MW16-14.57
FTMM-5-GW-M5MW20-13.65
FTMM-5-GW-M5MW23-10.82
FTMM-5-GW-M5MW11-9.46
FTMM-5-GW-M5MW111-9.46

FTMM-18-GW-M18MW22-18.91
FTMM-18-GW-M18MW23-9.28
FTMM-54-GW-296MW04-6.35
FTMM-54-GW-296MW06-10.1
FTMM-22-GW-CW1MW281-33.74
FTMM-22-GW-CW1MW28-11.21
FTMM-22-GW-CW1MW27-12.63
FTMM-22-GW-CW1MW31-16.40
FTMM-22-GW-CW1MW29-10.85
FTMM-22-GW-CW1MW37-11.78

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: January 15, 2016

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on November 16-18, 2015. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1510063

The samples in these SDGs were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs). The field QC samples collected a trip blank, two matrix spike/matrix spike duplicate (MS/MSD) pairs, three field duplicate (FD) samples and three equipment blank (EB) samples.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. All the coolers with the samples listed in the table below were received within the 2-6°C range recommended by the Department of Defense Quality System Manual (DoD QSM) version 4.2.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A "Level IV" validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for waters, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion consisted of the samples listed in the Sample ID table above. The samples were collected on November 16-18, 2015 and were analyzed for the full list of VOCs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted, except as follows:

FTMM-68-GW-565MW01-13.0 at 2.5x for all VOCs;
FTMM-68-GW-565MW01D-20.5 at 25x for all VOCs;
FTMM-68-GW-MW01-32.5 at 2.5x for all VOCs;
FTMM-68-GW-MW101-32.5 at 5x for tetrachloroethene only;
FTMM-68-GW-MW01-37.5 at 5x for tetrachloroethene only.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCSs, MSs, MSDs, and the surrogate spikes. FTMM-68-GW-MW03-17.5 and FTMM-68-GW-MW04-20.25 were selected for MS/MSD purposes.

All LCSs and surrogate recoveries were within acceptance criteria.

The MS and MSD recoveries were within acceptance criteria, except for the following:

FTMM-68-GW-MW03-17.5

Analyte	MS %R	MSD %R	Criteria
1,2,4-Trimethylbenzene	67	56	75-130
1,3,5-Trimethylbenzene	60	46	75-130
m/p-Xylene	(78)	72	75-130
o-Xylene	(81)	77	80-120
Styrene	47	34	65-135

All non-compliant analytes listed above, except m/p-Xylene and o-Xylene, were flagged “J/UJ” in the parent sample due to the low MS/MSD recoveries. No action was taken for the slightly low MSD recoveries for m/p-Xylene and o-Xylene.

FTMM-68-GW-MW04-20.25

Analyte	MS %R	MSD %R	Criteria
1,2,4-Trimethylbenzene	32	30	75-130
1,3,5-Trimethylbenzene	26	25	75-130

Analyte	MS %R	MSD %R	Criteria
p-Isopropyltoluene	73	73	75-130
m/p-Xylene	58	58	75-130
o-Xylene	64	64	80-120
Styrene	15	13	65-135

All non-compliant analytes listed above, except Isopropyltoluene, were flagged "J/UJ" in the parent sample due to the low MS/MSD recoveries. No action was taken for the slightly low MS/MSD recoveries for Isopropyltoluene.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. Precision was further evaluated by using the parent and field duplicate results.

All MS/MSD RPDs were within acceptance criteria, except Styrene was slightly above control limits for FTMM-68-GW-MW03-17.5. Since styrene was previously flagged due to the low recoveries in the MS/MSD, no further action was required.

All target VOCs were non-detect above the Limit of Quantitation (LOQ) in each pair of parent and field duplicate samples, except as follows:

Parent: FTMM-68-GW-MW02-17.5

Analyte	Parent (µg/L)	FD (µg/L)	RPD	Criteria
Methyl tert-Butyl Ether	14	14	0	RPD ≤ 40

Parent: FTMM-53-GW-699MW04-11.5

Analyte	Parent (µg/L)	FD (µg/L)	RPD	Criteria
Ethylbenzene	6.4	6.1	4.8	RPD ≤ 40
Isopropylbenzene (Cumene)	14	15	6.9	
Naphthalene	11	13	17	
n-Propylbenzene	19	21	10	

Parent: FTMM-68-GW-MW01-32.5

Analyte	Parent (µg/L)	FD (µg/L)	RPD	Criteria
Tetrachloroethane	660	640	3.1	RPD ≤ 40
Trichloroethene	17	19	11	

All RPDs met acceptance criteria in all three parent/FD pairs; therefore, no qualifiers were necessary.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

There was one method blank associated with each batch for VOCs and one trip blank per cooler. All method blanks were less than one-half the LOQs, as required by the project-specific UFP-QAPP, so no corrective action was required. It should be noted that low concentrations of 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Naphthalene and n-Butylbenzene were detected in one or more MBs. None of these VOCs were considered common laboratory contaminants at the time of analyses.

In addition to the analytical method blanks analyzed in this data package, a trip blank and two equipment blanks were also analyzed.

The trip blanks were non-detect for all target VOCs, except as follows:

TB ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
TB-2015-11-18	1,2,4-Trichloroebnzene	0.27	5.0
TB-2015-11-18	Naphthalene	0.27	5.0

The following samples were flagged “B” for possible blank contamination as indicated in the trip blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-699MW01-11.0	Naphthalene	0.21	B

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-MW01-32.5	Naphthalene	0.83	B

There were no 1,2,4-Trichlorobenzene or hexachlorobutadiene detections in any of the associated samples.

The equipment blanks were non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
EB-2015-11-17	Acetone	4.7	5.0
EB-2015-11-18	Acetone	5.1	5.0
EB-2015-11-18	Naphthalene	0.21	5.0

The following samples were flagged "B" for possible blank contamination as indicted in the equipment blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-699MW01-11.0	Naphthalene	0.21	B
FTMM-53-GW-699MW04-11.5	Acetone	3.7	B
FTMM-53-GW-699MW104-11.5	Acetone	3.1	B
FTMM-68-GW-MW01-32.5	Naphthalene	0.83	B

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: January 15, 2016

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on November 19 and 20, 2015. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1510161

The samples in these SDGs were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs), semivolatile organic compounds (SVOCs) plus TICs, metals and Pesticides. The field QC samples collected are a trip blank (TB) sample, a matrix spike/matrix spike duplicate (MS/MSD) pair, one field duplicate (FD) sample and two equipment blank (EB) samples.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. The coolers with the samples listed in the table below were received within the 2-6°C range recommended by the Department of Defense Quality System Manual (DoD QSM) version 4.2.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

SAMPLE IDs AND REQUESTED PARAMETERS

SAMPLE ID	LAB ID	MATRIX	COLLECTED	ANALYSIS	COMMENTS
FTMM-8-GW-M8MW21-13.0	R1510161-001	Water	11/19/2015	Metals	Pb only

EB-2015-11-20	R1510161-017	Water	11/20/2015	VOCs, SVOCs, Pest, Metals	Equipment Blank (Metals: Pd, As, Cd)

W = Water

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5030C	8260C	µg/L	NA
SVOCs	W	3541	8270D	µg/L	NA
Pesticides	W	3510C	8081B	µg/L	NA
Metals	W	3010A	6010C	µg/L	NA
Mercury	W	7470A	7470A	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A "Level IV" validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for waters, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion consisted of the samples listed in the Sample ID table above. The samples were collected on November 16-20 and 23, 2015 and were analyzed for the full list of VOCs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method. All analyses were performed undiluted.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCSs and the surrogate spikes. There were no samples selected on the COC for MS/MSD purposes.

All LCSs and surrogate recoveries were within acceptance criteria.

Precision

Precision is typically evaluated using the RPDs obtained from the LCS/LCSD, MS/MSD and field duplicate samples. In the absence of these QC samples, precision could not be evaluated.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.

- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

There was one method blank associated with each batch for VOCs and one trip blank per cooler. All method blanks were less than one-half the LOQs, as required by the project-specific UFP-QAPP, so no corrective action was required. It should be noted that low concentrations of 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Naphthalene and n-Butylbenzene were detected in one or more MBs. None of these VOCs were considered common laboratory contaminants at the time of analyses.

In addition to the analytical method blanks analyzed in this data package, a trip blank and two equipment blanks were also analyzed.

The trip blanks were non-detect for all target VOCs, except as follows:

TB ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
TB-2015-11-19	1,2,4-Trichlorobenzene	0.29	5.0
TB-2015-11-19	Hexachlorobutadiene	0.65	5.0
TB-2015-11-19	Naphthalene	0.22	5.0

There were no detections above the MDL in any of the associated samples; therefore qualifying the data was unnecessary.

The equipment blanks were non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
EB-2015-11-19	Tert-butyl-alcohol	29	100

There were no detections above the MDL in any of the associated samples; therefore qualifying the data was unnecessary.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

SEMIVOLATILE ORGANIC COMPOUNDS

General

The SVOC portion of SDG R1510161 consisted of the samples listed in the table above. The samples were collected on November 19 and 20, 2015 and were analyzed for the full list of semivolatiles as listed in the project-specific UFP-QAPP.

The SVOC analyses were performed according to USEPA SW846 Method 8270D. The samples were prepared and analyzed following the procedures outlined in the UFP-QAPP. The samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted and there were no TICs reports in any of the samples.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS, LCSD, and the surrogate spikes. There were no samples designated on the COC for MS/MSD purposes.

The LCS, LCSD were analyzed for SVOCs and all spike recoveries were within acceptance criteria, except as follows:

LCS ID	Analyte	LCS %R	LCSD %R	Criteria
LCS/LCSD Batch # 250879	Benzidine	9.0	(15)	10-130

( ) = indicated criteria was met

Although Benzidine met criteria in the LCSD and was only slightly low in the LCS; the very low recoveries warranted qualifying the associated sample FTMM-66-GW-886RW08-11.2 with a “UJ”.

All surrogate spike recoveries were within acceptance criteria.

Precision

Precision was evaluated using the RPD obtained from the LCS/LCSD concentrations. There were no field duplicate samples designated on the COC.

All LCS/LCSD RPDs were within acceptance criteria, except as follows:

LCS/LCSD ID	Analyte	MS/MSD % RPD	RPD Criteria
LCS/LCSD Batch # 250879	Benzidine	53	+/-30

Benzidine was previously qualified with a "UJ" due to the low recovery in the LCS, therefore no further corrective action was necessary.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

All samples were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

One method blank was analyzed for SVOCs for each batch, plus two equipment blanks. The method blanks were non-detect for all analytes.

The equipment blanks were non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
EB-2015-11-19	tert-Butyl Alcohol	29	100

There were no tert-Butyl Alcohol detections in any of the associated samples; therefore no corrective action was required.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All SVOC results for the sample in this SDG were considered usable. Thus, the completeness for the SVOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

PESTICIDES

General

The pesticide portion of SDG R1510161 consisted of the samples listed in the table above. The samples were collected on November 19 and 20, 2015 and were analyzed for the full list of pesticides as specified in the UFP-QAPP.

The pesticide analyses were performed according to the United States Environmental Protection Agency (USEPA) SW846 Method 8082A. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method. The analysis was performed undiluted.

It should be noted that the laboratory applied a "P" qualifier to the alpha-chlordane results for FTMM-56-GW-80MW02-7.5 and FTMM-56-GW-80MW102-7.5 due to the variance between results on the different columns. The data validator changed the "P" to "J" as estimated.

Accuracy

Accuracy was evaluated using the percent recovery (%R) obtained from the LCS, LCSD, MS, MSD and the surrogate spikes. FTMM-M8-GW-697-MW01-16.5 was selected on the COC for MS/MSD purposes.

All LCS, LCSD and surrogate recoveries were within acceptance criteria.

The MS and MSD recoveries were within acceptance criteria, except for the following:

FTMM-M8-GW-697MW01-16.5

Analyte	MS %R	MSD %R	Criteria
Endrin Aldehyde	49	48	55-135
alpha-Chlordane	(102)	141	65-125
gamma-Chlordane	(114)	158	60-125

All non-compliant analytes listed above, were flagged "J/UJ" in the parent sample due to the non-compliant MS/MSD recoveries.

Precision

Precision was evaluated using the RPD obtained from the LCS/LCSD and MS/MSD concentrations. Precision was further evaluated using the parent and field duplicate results.

All LCS/LCSD and MS/MSD RPDs were within acceptance criteria.

All target pesticides were non-detect above the Limit of Quantitation (LOQ) in the parent and field duplicate samples, except as follows:

Parent: FTMM-56-GW-80MW02-7.5

Analyte	Parent (µg/L)	FD (µg/L)	RPD	Criteria
Heptachlor Epoxide	0.055	0.055	0	RPD ≤ 40
alpha-Chlordane	0.28	0.28	0	
gamma-Chlordane	0.29	0.29	0	

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blanks for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the Work Plan. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All secondary source verification (SSV) criteria were met.
- All continuing calibration verification (CCV) criteria were met.
- All breakdown criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.

There was one method blank for pesticides analyses. The method blank was non-detect for all target pesticides.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All pesticides results for the samples in this SDG were considered usable. The completeness for the pesticides portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

METALS

General

The metals portion consisted of R1510161 consisted of the samples listed in the table above. The metals were analyzed for one or more of the following metals: lead, arsenic and/or cadmium. The samples were collected on November 19 and 20, 2015.

The metals analyses were performed using USEPA SW846 Method 6010C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method. The samples for metals analyses were performed undiluted.

It should be noted that several metals were reported at different LOQs than as stated in the UFP-QAPP. The LOQs are routinely updated by the laboratory, and are generally done so annually.

Accuracy

Accuracy was evaluated using the percent recovery (%R) obtained from the laboratory control sample (LCS). There were no samples designated on the COC for MS/MSD purposes.

All LCS recoveries were within acceptance criteria.

Precision

Precision is typically evaluated by comparing the LCS/LCSD, MS/MSD and field duplicate analyte values. In the absence of these QC samples, precision evaluation was not possible.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating preservation and holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. The samples were prepared and analyzed within the holding times required by the method.

- All instrument calibration criteria were met.
- All second source criteria were met. The ICV samples were prepared using a secondary source.
- All continuing calibration verification (CCV) criteria were met.
- All interference check (ICSA/ICSAB) criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.
- The dilution test (DT) was performed on FTMM-56-GW-80-MW05-7.0. The DT was not applicable since there were no metals reported at than 50 times the method detection limit (MDL).
- The post digestion spike (PDS) was performed on a non-project sample and therefore not applicable to this data set.

There was one (1) method blank, and several calibration blanks associated with the metals analyses in this SDG. All blanks were compliant, although cadmium had detections below one-half the Project quantitation Limit (PQL), as required by the UFP-QAPP. There were also an equipment blank associated with this SDG. EB-2015-11-20 reported cadmium at 0.317 µg/L with an LOQ of 5.0 µg/L. FTMM-56-GW-80MW05-7.0 was flagged “B” for possible cadmium contamination.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All metals results for the samples in this SDG were considered usable. Therefore, the completeness for the metals portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: January 15, 2016

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on November 23, 2015. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1510266

The samples in these SDGs were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs), semivolatile organic compounds (SVOCs) plus TICs, and Pesticides. The field QC samples collected are three trip blank (TB) samples, two matrix spike/matrix spike duplicate (MS/MSD) pairs, four field duplicate (FD) samples and six equipment blank (EB) samples.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. All the coolers with the samples listed in the table below were received within the 2-6°C range recommended by the Department of Defense Quality System Manual (DoD QSM) version 4.2.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

SAMPLE IDs AND REQUESTED PARAMETERS

SAMPLE ID	LAB ID	MATRIX	COLLECTED	ANALYSIS	COMMENTS
FTMM-66-GW-886RW06-8.75	R1510266-001	Water	11/23/2015	VOCs, SVOCs	
FTMM-66-GW-886RW01-11.9	R1510266-002	Water	11/23/2015	VOCs, SVOCs

W = Water

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5030C	8260C	µg/L	NA
SVOCs	W	3541	8270D	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A “Level IV” validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for waters, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion consisted of the samples listed in the Sample ID table above. The samples were collected on November 23, 2015 and were analyzed for the full list of VOCs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted, except as follows:

FTMM-53-GW-699RW05-10 at 2.5x for all VOCs.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCSs, MSs, MSDs, and the surrogate spikes. There were no samples selected on the COC for MS/MSD purposes.

All LCSs and surrogate recoveries were within acceptance criteria.

Precision

Precision is typically evaluated using the RPDs obtained from the LCS/LCSD, MS/MSD and field duplicate samples. In the absence of these QC samples, precision could not be evaluated.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

There was one method blank associated with each batch for VOCs and one trip blank per cooler. All method blanks were less than one-half the LOQs, as required by the project-specific UFP-QAPP, so no corrective action was required. It should be noted that low concentrations of 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Naphthalene and n-Butylbenzene were detected in one or more MBs. None of these VOCs were considered common laboratory contaminants at the time of analyses.

In addition to the analytical method blanks analyzed in this data package, trip blanks and equipment blanks were also analyzed.

The trip blanks were non-detect for all target VOCs, except as follows:

TB ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
TB-2015-11-23	1,2,4-Trichloroebnzene	0.24	5.0
TB-2015-11-23	Naphthalene	0.22	5.0

The following samples were flagged “B” for possible blank contamination as indicated in the trip blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-699RW03-12.8	Naphthalene	1.1	B
FTMM-53-GW-699RW05-10	Acetone	5.7	B

There were no 1,2,4-Trichlorobenzene or hexachlorobutadiene detections in any of the associated samples.

The equipment blanks were non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
EB-2015-11-23	Acetone	7.7	5.0
EB-2015-11-23	Naphthalene	0.22	5.0

The following samples were flagged “B” for possible blank contamination as indicted in the trip blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-699RW03-12.8	Naphthalene	1.1	B

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

SEMIVOLATILE ORGANIC COMPOUNDS

General

The SVOC portion of R1510266 consisted of the samples listed in the table above. The samples were collected on November 23, 2015 and were analyzed for the full list of semivolatiles as listed in the project-specific UFP-QAPP.

The SVOC analyses were performed according to USEPA SW846 Method 8270D. The samples were prepared and analyzed following the procedures outlined in the UFP-QAPP. The samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted. Only FTMM-66-GW-886RW01-11.9 contained one known TIC.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS, LCSD, and the surrogate spikes. There were no samples designated on the COC for MS/MSD purposes.

The LCS, LCSD were analyzed for SVOCs and all spike recoveries were within acceptance criteria, except as follows:

LCS ID	Analyte	LCS %R	LCSD %R	Criteria
LCS/LCSD Batch # 250969	2,4-Dinitrotoluene	(116)	122	50-120

( ) = indicated criteria was met

No action was required for the slightly high recovery for 2,4-Dinitrotoluene since there were no detections in the associated samples.

All surrogate spike recoveries were within acceptance criteria.

Precision

Precision was evaluated using the RPD obtained from the LCS/LCSD concentrations. There were no field duplicate samples designated on the COC.

All LCS/LCSD RPDs were within acceptance criteria.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

All samples were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met, except as follows:

Inst / ICV Date	Analyte	%R	Criteria (%D)
5973-A 12/4/15 3:26	4-Chloroaniline 3-Nitroaniline	33 53	85-115%

The ICV indicated a low bias for both analytes listed above, therefore the associated samples were flagged "UJ" for both analytes: FTMM-66-GW-886RW06-8.75 and FTMM-66-GW-886RW01-11.9.

- All instrument performance check criteria were met.
- All CCV criteria were met, except as follows:

Inst / CCV Date	Analyte	%R	Criteria (%D)
5973-A 12/9/15 7:27	4,6-Dinitro2-methylphenol 2,4-Dinitrophenol	68 58	80-120%

The CCV indicated a low bias for both analytes listed above, therefore the associated samples were flagged "UJ" for both analytes: FTMM-66-GW-886RW06-8.75 and FTMM-66-GW-886RW01-11.9.

- All internal standard criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.

- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

One method blank was analyzed for SVOCs for each batch, plus one equipment blank. The method blanks were non-detect for all analytes. The equipment blank EB-2015-11-23 reported a low concentration of diethyl phthalate at 4.0 µg/L with an LOQ of 9.4 µg/L. No action was required since there were no detections for this analyte in the associated samples.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All SVOC results for the sample in this SDG were considered usable. Thus, the completeness for the SVOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: January 22, 2016

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on November 23-25 and December 14 and 15, 2015. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1510346, R1510909

The samples in these SDGs were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs) and metals. The field QC samples collected are a matrix spike/matrix spike duplicate (MS/MSD) pair, a trip blank (TB) sample and two equipment blanks (EB) samples. The samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. All the coolers with the samples listed in the table below were received within the 2-6°C range recommended by the Department of Defense Quality System Manual (DoD QSM) version 4.2.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

SAMPLE IDS AND REQUESTED PARAMETERS

FTMM-61-GW-283MW02-13.06*	R1510909-002	Water	12/15/2015	VOCs	

W = Water

***** - TB-2015-12-14 was included in the same cooler as these samples; although logged in under WO R1510911. All VOC analytes results were non-detect to the MDLs for the TB sample.

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5030C	8260C	µg/L	NA
Metals	W	3010A	6010C	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A "Level IV" validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD ≤ 40 for waters, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion consisted of the samples listed in the Sample ID table above. The samples were collected on November 24 and 25 and December 15, 2015 and were analyzed for the full list of VOCs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted, except as follows:

FTMM-8-GW-M2MW11-21.5 at 10x for all VOCs.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCSs, MS, MSD, and the surrogate spikes. FTMM-53-GW-699MW09-9.0 was selected for MS/MSD purposes.

All LCSs and surrogate recoveries were within acceptance criteria.

The MS and MSD recoveries were within acceptance criteria, except for the following:

FTMM-53-GW-699MW09-9.0

Analyte	MS %R	MSD %R	Criteria
Styrene	60	(78)	65-135

( ) = Indicates criteria was met.

Styrene was qualified "UJ" in the parent sample due to the low recovery in the MS.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. There were no field duplicate samples associated with the VOCs sections of the SDGs.

All MS/MSD RPDs were within acceptance criteria, except bromomethane was slightly above control limits for FTMM-53-GW-699MW09-9.0 at 36% with criteria of 30%. Since the recoveries for bromomethane were within control limits, no action was deemed necessary.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

There was one method blank associated with each batch for VOCs and one trip blank per cooler. All method blanks were less than one-half the LOQs, as required by the project-specific UFP-QAPP, so no corrective action was required. It should be noted that low concentrations of 1,2,4-Trichlorobenzene, Hexachlorobutadiene and Naphthalene were detected in one or more MBs. None of these VOCs were considered common laboratory contaminants at the time of analyses.

In addition to the analytical method blanks analyzed in this data package, a trip blank and two equipment blanks were also analyzed.

The trip blanks were non-detect for all target VOCs, except as follows:

TB ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
TB-2015-11-25	1,2,4-Trichloroebnzene	0.25	5.0
TB-2015-11-25	Naphthalene	0.23	5.0

The following samples were flagged “B” for possible blank contamination as indicated in the trip blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-53-GW-699RW11-12.8	Naphthalene	1.0	B

FTMM-53-GW-699MW06-8.5	Naphthalene	0.64	B
FTMM-8-GW-M2MW11-21.5	Naphthalene	3.2	B

There were no 1,2,4-Trichlorobenzene or hexachlorobutadiene detections in any of the associated samples.

The equipment blanks were non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
EB-2015-11-24	Acetone	12	10
EB-2015-11-25	Acetone	12	10

The following samples were flagged "B" for possible blank contamination as indicted in the equipment blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-2-GW-M2MW03-12.2	Acetone	2.5	B
FTMM-2-GW-M2MW22-14	Acetone	3.9	B
FTMM-2-GW-M2MW21-15.2	Acetone	26	B
FTMM-2-GW-M2MW24-14.6	Acetone	1.8	B
FTMM-53-GW-699RW11-12.8	Acetone	5.8	B
FTMM-53-GW-699MW06-8.5	Acetone	2.1	B
FTMM-8-GW-M2MW11-21.5	Acetone	26	B
FTMM-64-GW-812MW04-4.7	Acetone	2.2	B

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

METALS

General

The metals portion consisted of the samples listed in the table above. The samples were analyzed for lead only. The samples were collected on November 24 and 25, 2015. It should be noted that equipment blanks were mistakenly analyzed for the full TAL metal suite, although only lead was required.

The lead analyses were performed using USEPA SW846 Method 6010C. All samples in this SDG were analyzed following the procedures outlined in the project-

specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method. The samples for metals analyses were performed undiluted.

It should be noted that lead was reported at a different LOQ than as stated in the UFP-QAPP. The LOQs are routinely updated by the laboratory, and are generally done so annually.

Accuracy

Accuracy was evaluated using the percent recovery (%R) obtained from the laboratory control sample (LCS). There were no samples designated on the COC for MS/MSD purposes, although the lab randomly chose FTMM-53-GW-RW11-12.8 for MS analysis.

The LCS and MS recoveries were within acceptance criteria.

Precision

Precision is typically evaluated by comparing the LCS/LCSD, MS/MSD and field duplicate analyte values. In the absence of these QC samples, precision evaluation was not possible.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating preservation and holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. The samples were prepared and analyzed within the holding times required by the method.

- All instrument calibration criteria were met.
- All second source criteria were met. The ICV samples were prepared using a secondary source.
- All continuing calibration verification (CCV) criteria were met.
- All interference check (ICSA/ICSAB) criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.
- The dilution test (DT) was performed on FTMM-53-GW-699RW11-12.8. The DT was not applicable since there were no metals reported at than 50 times the method detection limit (MDL).

- The post digestion spike (PDS) was performed on the same sample as the DT. The PDS for lead met the criteria of 90-110% at 96%.

There was one (1) method blank, and several calibration blanks associated with the metals analyses in this SDG. All blanks were compliant.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All metals results for the samples in this SDG were considered usable. Therefore, the completeness for the metals portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

Analytical Report for Service Request No: R1508298

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM Q4 GW Sampling/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on October 2, 2015. For your reference, these analyses have been assigned our service request number **R1508298.**

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

Janice Jaeger
Project Manager

ALS Environmental

Client:	Parsons, Inc.
Service Request No.:	R1508298
Project:	Fort Monmouth Q4 Sampling
Date Received:	10/2/15
Sample Matrix:	Water
Project/Case No.:	748810-03000

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Control Sample (LCS). A review to the EDD to the signed report has been performed and the EDD is correct and complete.

Sample Receipt

Water samples were received for analysis at ALS Environmental on 10/2/15. The samples were received in good condition except as noted on the Cooler Receipt and Preservation Check Form immediately following the Chain of Custody in the report. The samples were consistent with the Chain of Custody. The Cooler temperature upon receipt was within the proper guidelines. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

General Comments

The DOD QSM 4.2 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.2.

Volatile Organics

Three water samples were analyzed for TCL Volatile organics by SW-846 method 5030/8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial calibration criteria for Bromoform and n-Propylbenzene exceeded 15%. There were no hits for these compounds and all other QC were within QC limits. All Continuing Calibration Verification (CCV) standards were within 20% Difference (D) except tert-Butyl Alcohol, Bromomethane, Chloromethane and Vinyl Chloride on the 10/13/15 CCV. No data was affected.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable with the exception of Chloromethane. This was outside of the control limits high and has been flagged with a "*". The high bias allows for appropriate sensitivity of detection.

Site QC was not requested on these samples.

00002

The Method Blanks associated with these samples were free of contamination.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

ACCREDITED IN ACCORDANCE WITH nelac

Analytical Report for Service Request No: R1508298

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM Q4 GW Sampling/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on October 2, 2015. For your reference, these analyses have been assigned our service request number **R1508298.**

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

RIGHT SOLUTIONS | RIGHT PARTNER

00002

ALS Environmental

Client:	Parsons, Inc.
Service Request No.:	R1508298
Project:	Fort Monmouth Q4 Sampling
Date Received:	10/2/15
Sample Matrix:	Water
Project/Case No.:	748810-03000

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Control Sample (LCS). A review to the EDD to the signed report has been performed and the EDD is correct and complete.

Sample Receipt

Water samples were received for analysis at ALS Environmental on 10/2/15. The samples were received in good condition except as noted on the Cooler Receipt and Preservation Check Form immediately following the Chain of Custody in the report. The samples were consistent with the Chain of Custody. The Cooler temperature upon receipt was within the proper guidelines. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

General Comments

The DOD QSM 4.2 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.2.

Volatile Organics

Three water samples were analyzed for TCL Volatile organics by SW-846 method 5030/8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial calibration criteria for Bromoform and n-Propylbenzene exceeded 15%. There were no hits for these compounds and all other QC were within QC limits. All Continuing Calibration Verification (CCV) standards were within 20% Difference (D) except tert-Butyl Alcohol, Bromomethane, Chloromethane and Vinyl Chloride on the 10/13/15 CCV. No data was affected.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable with the exception of Chloromethane. This was outside of the control limits high and has been flagged with a "*". The high bias allows for appropriate sensitivity of detection.

Site QC was not requested on these samples.

00003

The Method Blanks associated with these samples were free of contamination.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

ACCREDITED IN ACCORDANCE WITH nelac

Laboratory Results for: FTMM Baseline

Dear Sandra,

Enclosed are the results of the sample(s) submitted to our laboratory November 19, 2015
For your reference, these analyses have been assigned our service request number **R1510063.**

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Vanessa Badman

ALS Environmental

Client:	Parsons, Inc.
Service Request No.:	R1510063
Project:	FTMM Baseline
Date Received:	November 19, 2015
Sample Matrix:	Water
Project/Case No.:	

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/19/15. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5030C/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within limits.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits..

Site specific QC was within limits except:

R1510063-006
1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, and Styrene were recovered low outside method acceptance limits for the MS and MSD. The RPD associated with these results were within method acceptance limits.
m,p-Xylene and o-Xylene were recovered low outside method acceptance limits for the MSD. The MS and RPD associated with these results were within method acceptance limits.

R1510063-008
1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene,Styrene, m,p-Xylene, and o-Xylene were recovered low outside method acceptance limits for the MS and MSD. The RPD associated with these results were within method acceptance limits

The Method Blanks associated with these samples were free of contamination, except for low level concentrations between the MDL and MRL for the following analytes from the 11/24/15 run; n-Butylbenzene, 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Napthalnene. The following analytes from the 11/30/15 run had hits between the MDL and MRL; 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Napthalnene. All affected samples are marked with a J flag.

No other analytical or QC problems were encountered.

ALS Environmental

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

ACCREDITED IN ACCORDANCE WITH nelac

Rochester Lab ID # for State Certifications[1]

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory or go to http://www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads/North-America-Downloads

Cooler Receipt and Preservation Check Form

Project/Client Parsons Folder Number .

Cooler received on 11/19/15 by: @

COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	(Y) N	5a	**Perchlorate** samples have required headspace?	Y N (NA)
2	**Custody papers** properly completed (ink, signed)?	(Y) N	5b	Did VOA vials, Alk,or Sulfide have sig* **bubbles**?	Y (N) NA
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	6	Where did the bottles originate?	(ALS/ROC) CLIENT
4	Circle: (Wet Ice) **Dry Ice Gel packs** present?	(Y) N	7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 11/19/15 Time: 0808 ID: IR#3 (IR#5) From: Temp Blank (Sample Bottle)

Observed Temp (°C)	5.4						
Correction Factor (°C)	-1.8						
Corrected Temp (°C)	3.6°						
Within 0-6°C?	(Y) N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: R-002 by @ on 11/19/15 at 0813
5035 samples placed in storage location: _____ by _____ on _____ at _____

PC Secondary Review: VNB

Cooler Breakdown: Date: 11/19/15 Time: 1237 by: MAR

1. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? (YES) NO
2. Did all bottle labels and tags agree with custody papers? (YES) NO
3. Were correct containers used for the tests indicated? (YES) NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated (N/A)

Explain any discrepancies:

pH	Reagent	Yes	No	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For CN Phenol and 522			If +, contact PM to add $Na_2S_2O_3$ (CN), ascorbic (phenol).					
	$Na_2S_2O_3$	-	-						
	ZnAcetate	-	-						
	HCl	**	**	4114070	10/16				

**Not to be tested before analysis – pH tested and recorded by VOAs on a separate worksheet

Yes=All samples OK

No=Samples were preserved at The lab as listed

PM OK to Adjust: _____

Bottle lot numbers: S-211-002

Other Comments:

PC Secondary Review: VNB 11/19/15

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Austin, TX 78754

Laboratory Results for: FTMM Baseline

Dear Sandra,

Enclosed are the results of the sample(s) submitted to our laboratory November 19, 2015
For your reference, these analyses have been assigned our service request number **R1510063.**

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Vanessa Badman

RIGHT SOLUTIONS | RIGHT PARTNER

ALS Environmental

Client:	Parsons, Inc.
Service Request No.:	R1510063
Project:	FTMM Baseline
Date Received:	November 19, 2015
Sample Matrix:	Water
Project/Case No.:	

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/19/15. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5030C/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within limits.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits..

Site specific QC was within limits except:

R1510063-006
1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, and Styrene were recovered low outside method acceptance limits for the MS and MSD. The RPD associated with these results were within method acceptance limits.
m,p-Xylene and o-Xylene were recovered low outside method acceptance limits for the MSD. The MS and RPD associated with these results were within method acceptance limits.

R1510063-008
1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene,Styrene, m,p-Xylene, and o-Xylene were recovered low outside method acceptance limits for the MS and MSD. The RPD associated with these results were within method acceptance limits

The Method Blanks associated with these samples were free of contamination, except for low level concentrations between the MDL and MRL for the following analytes from the 11/24/15 run; n-Butylbenzene, 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Napthalnene. The following analytes from the 11/30/15 run had hits between the MDL and MRL; 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Napthalnene. All affected samples are marked with a J flag.

No other analytical or QC problems were encountered.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

ACCREDITED IN ACCORDANCE WITH nelac

Cooler Receipt and Preservation Check Form

Project/Client Parsons Folder Number .

Cooler received on 11/19/15 by: Q COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	(Y) N	5a	**Perchlorate** samples have required headspace?	Y N (NA)
2	**Custody papers** properly completed (ink, signed)?	(Y) N	5b	Did VOA vials, Alk,or Sulfide have sig* **bubbles**?	Y (N) NA
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	6	Where did the bottles originate?	(ALS/ROC) CLIENT
4	Circle: (Wet Ice) **Dry Ice Gel packs** present?	(Y) N	7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 11/19/15 Time: 0808 ID: IR#3 (IR#5) From: Temp Blank (Sample Bottle)

Observed Temp (°C)	5.4						
Correction Factor (°C)	-1.8						
Corrected Temp (°C)	3.6°						
Within 0-6°C?	(Y) N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: Ice melted Poorly Packed Same Day Rule

&Client Approval to Run Samples: Standing Approval Client aware at drop-off Client notified by:

All samples held in storage location: R-002 by Q on 11/19/15 at 0813
5035 samples placed in storage location: by on at

PC Secondary Review: VNB

Cooler Breakdown: Date: 11/19/15 Time: 1237 by: MAR

1. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? (YES) NO
2. Did all bottle labels and tags agree with custody papers? (YES) NO
3. Were correct containers used for the tests indicated? (YES) NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated (N/A)

Explain any discrepancies:

pH	Reagent	Yes	No	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For CN Phenol and 522			If +, contact PM to add $Na_2S_2O_3$ (CN), ascorbic (phenol).					
	$Na_2S_2O_3$	-	-						
	ZnAcetate	-	-						
	HCl	**	**	4114070	10/16				

**Not to be tested before analysis – pH tested and recorded by VOAs on a separate worksheet

Yes=All samples OK

No=Samples were preserved at The lab as listed

PM OK to Adjust:

Bottle lot numbers: S-211-002
Other Comments:

PC Secondary Review: VNB 11/19/15 *significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Analytical Report

Client: Parsons Engineering Science
Project: FTMM Baseline/748810-03000
Sample Matrix: Water

Service Request: R1510063
Date Analyzed: 11/30/15 12:34

Method Blank Summary
Volatile Organic Compounds by GC/MS

Sample Name: Method Blank
Lab Code: RQ1514764-04
Instrument ID: R-MS-12
File ID: I:\ACQUDATA\MSVOA12\DATA\113015\MM8394.D\

Analytical Method: 8260C
Prep Method: EPA 5030C

This Method Blank applies to the following analyses:

Analytical Report

Client:	Parsons Engineering Science	**Service Request:**	R1510063
Project:	FTMM Baseline/748810-03000	**Date Collected:**	11/17/15
Sample Matrix:	Water	**Date Received:**	11/19/15
		Date Analyzed:	11/25/15 0330

Tentatively Identified Compounds (TIC)
Volatile Organic Compounds by GC/MS

Sample Name:	FTMM-68-GW-MW102-17.5	**Units:**	µg/L
Lab Code:	R1510063-004	**Basis:**	NA

Prep Method: EPA 5030C
Analytical Method: 8260C

CAS #	Analyte Name	RT	Result	Q

No Tentatively Identified Compounds Detected.
