Analytical Report

Client:	Parsons Engineering Science	**Service Request:**	R1510161
Project:	FTMM Baseline 2015 Q4 GW Sampling/748810-03000	**Date Collected:**	11/19/15 1647
Sample Matrix:	Water	**Date Received:**	11/21/15
Sample Name:	FTMM-M8-GW-697MW01-16.5	**Units:**	µg/L
Lab Code:	RQ1514596-05	**Basis:**	NA
Run Type:	Duplicate Matrix Spike		

Organochlorine Pesticides by Gas Chromatography

Analytical Method: 8081B
Prep Method: EPA 3510C

Analytical Report for Service Request No: R1510266

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM 2015 Annual GW Sampling/748810-03000/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on November 25, 2015. For your reference, these analyses have been assigned our service request number **R1510266**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

Vanessa N. Badman

Vanessa Badman

RIGHT SOLUTIONS | RIGHT PARTNER

ALS Environmental

Client:	Parsons Engineering Science
Service Request No.:	R1510266
Project:	FTMM 2015 Annual GW Sampling/748810-03000
Date Received:	November 25, 2015
Sample Matrix:	Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/25/15. The samples were received in good condition and consistent with the accompanying chain of custody form. All sampling activities performed by ALS personnel have been in accordance with "ALS Field Procedures and Measurements Manual" or by client specifications. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5035A/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within 20% Difference (D) except for Acetone which recovered low.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination except for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Naphthalene. Any hits in the samples should be considered to be estimated.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly.

No other analytical or QC problems were encountered.

Semi-Volatile Organics

Samples were analyzed for a site list of Semi-Volatile Organics by Method 3541/8270D and 3580/8270D from SW-846.

All Tuning criteria for DFTPP were within QC limits.

The ICAL recovered >15% for Deithyl Phthalate. The ICV recovered >20% for 4-Chloroaniline, 3-Nitroaniline, and 3,3-Dichlorobenzidine. Any hits in the samples should be considered estimated.

All CCV standards were within 20% D for all analytes except for 4,6-Dinitro-2-methylphenol and 2,4-Dinitro Phenol, which recovered high.

All Internal Standard Areas were within QC limits.

All surrogate standard recoveries were within limits.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries and RPD's were within limits except for 2,4-Dinitrotoluene which recovered high in the LCSD. The LCS and the LCSD have been reported as zero percent recovery for Benzidine due to a limitation in LIMs. Benzidine was detected with 12% recovery in the LCS and has been flagged with a "*"; and 16% recovery in the LCSD which should not be flagged on the summary form. The precision was calculated to be 28% RPD.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly.

No other analytical or QC problems were encountered.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Analytical Report for Service Request No: R1510266

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM 2015 Annual GW Sampling/748810-03000/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on November 25, 2015. For your reference, these analyses have been assigned our service request number **R1510266**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

Vanessa N. Badman

ALS Environmental

Client:	Parsons Engineering Science
Service Request No.:	R1510266
Project:	FTMM 2015 Annual GW Sampling/748810-03000
Date Received:	November 25, 2015
Sample Matrix:	Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/25/15. The samples were received in good condition and consistent with the accompanying chain of custody form. All sampling activities performed by ALS personnel have been in accordance with "ALS Field Procedures and Measurements Manual" or by client specifications. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5035A/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within 20% Difference (D) except for Acetone which recovered low.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination except for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Naphthalene. Any hits in the samples should be considered to be estimated.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly.

No other analytical or QC problems were encountered.

Semi-Volatile Organics

Samples were analyzed for a site list of Semi-Volatile Organics by Method 3541/8270D and 3580/8270D from SW-846.

All Tuning criteria for DFTPP were within QC limits.

The ICAL recovered >15% for Deithyl Phthalate. The ICV recovered >20% for 4-Chloroaniline, 3-Nitroaniline, and 3,3-Dichlorobenzidine. Any hits in the samples should be considered estimated.

All CCV standards were within 20% D for all analytes except for 4,6-Dinitro-2-methylphenol and 2,4-Dinitro Phenol, which recovered high.

All Internal Standard Areas were within QC limits.

All surrogate standard recoveries were within limits.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries and RPD's were within limits except for 2,4-Dinitrotoluene which recovered high in the LCSD. The LCS and the LCSD have been reported as zero percent recovery for Benzidine due to a limitation in LIMs. Benzidine was detected with 12% recovery in the LCS and has been flagged with a "*"; and 16% recovery in the LCSD which should not be flagged on the summary form. The precision was calculated to be 28% RPD.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly.

No other analytical or QC problems were encountered.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Method Blank Summary
Semivolatile Organic Compounds by GC/MS

Sample Name:	Method Blank	**Instrument ID:**	R-MS-51
Lab Code:	RQ1514729-01	**File ID:**	I:\ACQUDATA\5973A\DATA\120915\DC455.D\
Analytical Method:	8270D		
Prep Method:	EPA 3510C		

This Method Blank applies to the following analyses:

Sample Name	Lab Code	File ID	Date Analyzed
Lab Control Sample	RQ1514729-02	I:\ACQUDATA\5973A\DATA\120915\DC456.D\	12/9/15 09:15

Analytical Report for Service Request No: R1510346

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM Baseline/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on November 30, 2015. For your reference, these analyses have been assigned our service request number **R1510346**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

Vanessa M. Badman

RIGHT SOLUTIONS | RIGHT PARTNER

ALS Environmental

Client:	Parsons Engineering Science
Service Request No.:	R1510346
Project:	FTMM Baseline 2015 Q4 GW Sampling
Date Received:	November 30, 2015
Sample Matrix:	Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/30/15. The samples were received in good condition and consistent with the accompanying chain of custody form. All sampling activities performed by ALS personnel have been in accordance with "ALS Field Procedures and Measurements Manual" or by client specifications. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Metals

Samples were analyzed for a site specific list of Metals. Please see attached report pages for method numbers.

All LCS recoveries were within limits.

Site specific QC was not requested on these samples.

All Method blanks were free of contamination, except for Aluminum, Total, Chromium, Total, and Magnesium, Total. Any hits in the samples should be considered estimated.

All samples related QC were within limits.

No other analytical or QC problems were encountered.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5035A/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within 20% Difference (D), except for Bromomethane which recovered low.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination except for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Naphthalene. Any hits in the samples should be considered to be estimated.

In the Matrix Spike (MS), Styrene recovered low. All RPDs were within acceptable limits except for Bromomethane, which recovered high.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly. R1510346-014 was diluted due to foaming in the sample.

No other analytical or QC problems were encountered.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Cooler Receipt and Preservation Check Form

Project/Client Parsons Folder Number _____.

Cooler received on 12/1/15 by: MAR

COURIER: ALS (UPS) FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)
2	**Custody papers** properly completed (ink, signed)?	(Y) N
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N
4	Circle: **Wet Ice** **Dry Ice** **Gel packs** present?	(Y) N

5a	**Perchlorate** samples have required headspace?	Y N (NA)
5b	Did VOA vials, Alk,or Sulfide have sig* **bubbles**?	Y N NA
6	Where did the bottles originate?	(ALS/ROC) CLIENT
7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 12/1/15 Time: 0929 ID: (IR#3) IR#5 From: (Temp Blank) Sample Bottle

Observed Temp (°C)	1.9						
Correction Factor (°C)	-0.6						
Corrected Temp (°C)	1.3						
Within 0-6°C?	(Y) N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: R002 by MAR on 12/1/15 at 0935
5035 samples placed in storage location: _____ by _____ on _____ at _____

PC Secondary Review: VNB

Cooler Breakdown: Date: 12/1/15 Time: 1131 by: MAR

1. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? (YES) NO
2. Did all bottle labels and tags agree with custody papers? ~~YES~~ (NO) – MW22-14 → MW22-15?
3. Were correct containers used for the tests indicated? (YES) NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated (~~NA~~)

Explain any discrepancies:

pH	Reagent	Yes	No	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3	X		BDB22147H	10/16				
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For CN Phenol and 522			If +, contact PM to add $Na_2S_2O_3$ (CN), ascorbic (phenol).					
	$Na_2S_2O_3$	-	-						
	ZnAcetate	-	-						
	HCl	**	**	4114070	10/16				

**Not to be tested before analysis – pH tested and recorded by VOAs on a separate worksheet

Yes=All samples OK

No=Samples were preserved at The lab as listed

PM OK to Adjust: _____

Bottle lot numbers: S-211-002, 092815-2A10, *071315-2AAW
Other Comments:

PC Secondary Review: VNB 12/1/15

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

tert-Butylbenzene	20.2	20.0	101	70 - 130
trans-1,2-Dichloroethene	21.1	20.0	106	60 - 140
trans-1,3-Dichloropropene	21.1	20.0	106	55 - 140

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

EB-2015-11-25 Dissolved	R1510346-020

Were ICP interelement corrections applied? Yes/No YES

Were ICP background corrections applied? Yes/No YES
If yes-were raw data generated before application of background corrections? Yes/No NO

Analytical Report for Service Request No: R1510346

Sandra de las Fuentes
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM Baseline/748810-03000

Dear Sandra:

Enclosed are the results of the sample(s) submitted to our laboratory on November 30, 2015. For your reference, these analyses have been assigned our service request number **R1510346**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7478. You may also contact me via email at Vanessa.Badman@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

Vanessa M. Badman

RIGHT SOLUTIONS | RIGHT PARTNER

ALS Environmental

Client:	Parsons Engineering Science
Service Request No.:	R1510346
Project:	FTMM Baseline 2015 Q4 GW Sampling
Date Received:	November 30, 2015
Sample Matrix:	Water

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Samples were received for analysis at ALS Environmental on 11/30/15. The samples were received in good condition and consistent with the accompanying chain of custody form. All sampling activities performed by ALS personnel have been in accordance with "ALS Field Procedures and Measurements Manual" or by client specifications. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

Metals

Samples were analyzed for a site specific list of Metals. Please see attached report pages for method numbers.

All LCS recoveries were within limits.

Site specific QC was not requested on these samples.

All Method blanks were free of contamination, except for Aluminum, Total, Chromium, Total, and Magnesium, Total. Any hits in the samples should be considered estimated.

All samples related QC were within limits.

No other analytical or QC problems were encountered.

Volatile Organics

Samples were analyzed for a site list of Volatile Organics by Methods 5035A/8260C from SW-846.

All Tuning criteria for BFB were within QC limits.

All the initial calibration criteria were met for all analytes.

All Continuing Calibration Verification (CCV) standards were within 20% Difference (D), except for Bromomethane which recovered low.

All Internal Standard Areas (IS) were within QC limits.

All surrogate standard recoveries were acceptable.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination except for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Naphthalene. Any hits in the samples should be considered to be estimated.

In the Matrix Spike (MS), Styrene recovered low. All RPDs were within acceptable limits except for Bromomethane, which recovered high.

Due to sample matrix or non-target analyte concentrations, dilutions were performed and the MRLs adjusted accordingly. R1510346-014 was diluted due to foaming in the sample.

No other analytical or QC problems were encountered.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Arcolor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

QA/QC Report

Client: Parsons Engineering Science
Project: FTMM Baseline/748810-03000
Sample Matrix: Water

Service Request: R1510346
Date Collected: 11/25/15
Date Received: 11/30/15
Date Analyzed: 12/ 3/15

Matrix Spike Summary
Volatile Organic Compounds by GC/MS

Sample Name: FTMM-53-GW-699MW09-9.0
Lab Code: R1510346-007

Units: µg/L
Basis: NA

Analytical Method: 8260C
Prep Method: EPA 5030C

		FTMM-53-GW-699MW09-9.0 MS Matrix Spike RQ1514947-05			FTMM-53-GW-699MW09-9.0 DMS Duplicate Matrix Spike RQ1514947-06

Results flagged with an asterisk (*) indicate values outside control criteria.
Results flagged with a pound (#) indicate the control criteria is not applicable.
Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Analytical Report

Client: Parsons Engineering Science
Project: FTMM Baseline/748810-03000
Sample Matrix: Water

Service Request: R1510346
Date Collected: 11/25/15
Date Received: 11/30/15
Date Analyzed: 12/3/15 1725

Tentatively Identified Compounds (TIC)
Volatile Organic Compounds by GC/MS

Sample Name: FTMM-53-GW-699RW11-12.8
Lab Code: R1510346-008

Units: µg/L
Basis: NA

Prep Method: EPA 5030C
Analytical Method: 8260C

CAS #	Analyte Name	RT	Result	Q
000078-78-4	Butane, 2-methyl-	1.83	**16**	JN
000079-29-8	Butane, 2,3-dimethyl-	2.91	**21**	JN
	unknown	2.96	**8.2**	J
000096-14-0	Pentane, 3-methyl-	3.26	**17**	JN
000108-08-7	Pentane, 2,4-dimethyl-	4.43	**8.4**	JN
	unknown	4.52	**14**	J
	unknown	5.80	**22**	J
	unknown	6.35	**16**	J
