Laboratory Results for: FTMM Baseline/748810-03000

Dear Tammy:

Enclosed are the results of the sample(s) submitted to our laboratory on October 4, 2014. For your reference, these analyses have been assigned our service request number **R1407825**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

CASE NARRATIVE

Client:	Parsons Engineering Science	**Service Request No.:**	R1307825
Project:	FTMM Baseline	**Project No.:**	748810-0300
Sample Matrix:	Water	**Date Received:**	10/04/14

General Comments

The DOD QSM 4.1 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.1.

Sample Receipt

Samples were collected on 10/02-03/14 and received in good condition at cooler temperatures of and 4.9 and 5.5°C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the batching form for a cross-reference between Client ID and ALS Job #.

Volatile Organics

Six water samples were analyzed for TCL Volatile organics by SW-846 method 8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-3-GW-M3MW02-21. All recoveries and RPD were within QC limits.

The Method Blanks associated with these samples were free of contamination except a "J" flagged value for Bromomethane. No data was affected.

R1307825
Page 2

Semi-Volatile Organics

Five water samples were analyzed for TCL Volatile organics by SW-846 method 8270D. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All Tuning criteria for DFTPP were within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-66-GW-886RW01-11.55. All recoveries and RPD were within QC limits except 3,3-Dichlorobenzidine and Benzidine and have been flagged with an "*".

All Blank Spike/Blank Spike Duplicate (LCS/LCSD) recoveries were within QC acceptance limits except the LCS/LCSD for Benzidine and the LCSD for Di-n-butylphthalate which have been flagged with an "*". All samples are possibly biased low for Benzidine. No other data was affected.

The Method Blanks associated with these samples were free of contamination.

Metals Analysis

One water sample was analyzed for Lead by method 6010C from SW-846. Three water samples were analyzed for TAL Metals by methods 6010C/7470A from SW-846. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All blank spike recoveries (LCS) were within QC limits of 80 – 120 %.

A Matrix Spike and Duplicate were done on sample FTMM-3-GW-M3MW02-21. All recoveries were within QC limits. The recovery for Magnesium could not be accurately determined as the amount present in the sample was greater than four times the amount added as spike.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS.
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Laboratory Results for: FTMM Baseline/748810-03000

Dear Tammy:

Enclosed are the results of the sample(s) submitted to our laboratory on October 4, 2014. For your reference, these analyses have been assigned our service request number **R1407825**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

CASE NARRATIVE

Client:	Parsons Engineering Science	**Service Request No.:**	R1307825
Project:	FTMM Baseline	**Project No.:**	748810-0300
Sample Matrix:	Water	**Date Received:**	10/04/14

General Comments

The DOD QSM 4.1 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.1.

Sample Receipt

Samples were collected on 10/02-03/14 and received in good condition at cooler temperatures of and 4.9 and 5.5°C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the batching form for a cross-reference between Client ID and ALS Job #.

Volatile Organics

Six water samples were analyzed for TCL Volatile organics by SW-846 method 8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-3-GW-M3MW02-21. All recoveries and RPD were within QC limits.

The Method Blanks associated with these samples were free of contamination except a "J" flagged value for Bromomethane. No data was affected.

R1307825
Page 2

Semi-Volatile Organics

Five water samples were analyzed for TCL Volatile organics by SW-846 method 8270D. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All Tuning criteria for DFTPP were within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-66-GW-886RW01-11.55. All recoveries and RPD were within QC limits except 3,3-Dichlorobenzidine and Benzidine and have been flagged with an "*".

All Blank Spike/Blank Spike Duplicate (LCS/LCSD) recoveries were within QC acceptance limits except the LCS/LCSD for Benzidine and the LCSD for Di-n-butylphthalate which have been flagged with an "*". All samples are possibly biased low for Benzidine. No other data was affected.

The Method Blanks associated with these samples were free of contamination.

Metals Analysis

One water sample was analyzed for Lead by method 6010C from SW-846. Three water samples were analyzed for TAL Metals by methods 6010C/7470A from SW-846. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All blank spike recoveries (LCS) were within QC limits of 80 – 120 %.

A Matrix Spike and Duplicate were done on sample FTMM-3-GW-M3MW02-21. All recoveries were within QC limits. The recovery for Magnesium could not be accurately determined as the amount present in the sample was greater than four times the amount added as spike.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also dctected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS.

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.
