1.0 INTRODUCTION

This report presents the results for the annual (fourth quarter) 2014 groundwater sampling event performed at 14 sites within Fort Monmouth (FTMM) by Parsons Government Services, Inc. (Parsons) to support the Remedial Investigation (RI), Feasibility Study (FS), and Decision Documents project at FTMM, Oceanport, Monmouth County, New Jersey.

The work was conducted under the Worldwide Environmental Restoration Services (WERS) contract number W912DY-09-D-0062 of the United States Army Engineering & Support Center, Huntsville (USAESCH).

The activities discussed within this report were conducted in accordance with:

- New Jersey Department of Environmental Protection (NJDEP) Technical Requirements for Site Remediation (TRSR) (N.J.A.C. 7:26E); and
- New Jersey Field Sampling Procedures Manual (FSPM) (February 2006).

1.1 PURPOSE AND SCOPE

Groundwater sampling was conducted between September 29, 2014 and December 19, 2014. The sampling program implemented is consistent with the recommendations for quarterly/annual sampling made in the August 2013 Baseline Groundwater Sampling Report (Parsons, 2014), and accepted by the NJDEP in a letter dated February 5, 2015. Analytical results for the samples collected in 2014 were also used to evaluate the FTMM's long-term groundwater sampling program and the potential for removal of monitoring wells or analytes in comparison to historical groundwater concentrations.

1.2 REPORT ORGANIZATION

This Annual (Fourth Quarter) 2014 Groundwater Sampling Report includes the following sections:

- Section 1 provides an introduction and organization to the report;
- Section 2 presents general information on the annual (fourth quarter) 2014 groundwater sampling event, a description of any significant deviations or events that may have impacted results, and the usability of laboratory analytical data;
- Section 3 provides the applicable remedial standards;
- Section 4 summarizes the approach to findings and recommendations for the FTMM Groundwater Sampling Program Sites;
- Section 5 presents the references used in preparation of this report;
- Appendices A through N provide historical groundwater analytical results, annual 2014 groundwater analytical results, and the findings and recommendations for each site;
- Appendix O provides a memorandum regarding data validation for the 2014 annual sampling event; and
- Appendix P provides the laboratory analytical reports, which are included as a CD;
- Appendix Q provides relevant communication with the NJDEP regarding groundwater sampling at the FTMM for 2014.

2.0 GROUNDWATER SAMPLING PROGRAM

2.1 INTRODUCTION

Work performed as part of the FTMM Groundwater Sampling Program was conducted as outlined in the project's Sampling and Analysis Plan (SAP) (Parsons, 2013), and Health and Safety Plan (HASP) (Parsons, 2013). The groundwater sampling event involved depth-to-water level measurements and collection of groundwater samples from 49 monitoring wells. The monitoring wells are located at 14 sites within two areas of FTMM, the Main Post (MP) and Charles Wood Area (CWA). **Table 1** presents the site name, location area, number of wells on the site and number of wells sampled. Prior to groundwater sampling activities, a site reconnaissance was performed to locate each monitoring well and assess its condition and accessibility. The location of FTMM and the 14 sites discussed within this report is provided on **Figure 1.1**, **Figure 1.2**, **and Figure 1.3**.

Further details regarding groundwater sampling activities and results for each individual site can be found in **Appendices A through N**.

2.1.1 Water Level Measurements

Between September 29 and October 1, 2014, depth-to-water measurements were collected from site monitoring wells prior to initiating sampling activities. Levels were obtained with an oil water interface probe from the top of the inner casing of the well. The water level probe was decontaminated in accordance with the SAP. Water level measurements were used to calculate the groundwater elevations, and confirm the previously determined groundwater flow direction. Groundwater contour figures for the 14 sites discussed within this report are provided in **Appendices A through N**.

2.1.2 Monitoring Well Assessment

During depth-to-water measurement in the monitoring wells, the condition of each monitoring well was assessed. Wells were visually inspected for physical damage, obstructions, or the presence of pump tubing in the well casing. The depth to the bottom of each monitoring well was also gauged and compared to the installed depth in order to determine if there was sediment build up in the well. The condition of the monitoring wells at each of the 14 FTMM sites is presented in Section 2.0 of the individual **Appendices A through N** for each FTMM site**.**

2.1.3 Groundwater Sampling

Groundwater samples were collected from 49 monitoring wells between September 30 and October 3 of 2014 using either low-flow purging and sampling (LFPS) or passive diffusion bag (PDB) sampling methodology. NJDEP approved the use of PDB sampling in a letter dated July 29, 2013 at FTMM-22 and FTMM-68, and at that time FTMM-53 was not approved for PBDs because of the historical presence of methyl tert-butyl ether (MTBE) in groundwater (a copy of the letter is provided in **Appendix Q**). However, the August 2013 baseline and first quarter 2014 groundwater sampling results demonstrated that MTBE was no longer present in the wells or detected at very low concentrations slightly above the detection limit on the site (FTMM-53). The NJDEP agreed that this site was deemed eligible for sampling using PDB based on their July 3, 2014 comment letter (refer to **Appendix Q**). PDBs were filled with laboratory-grade de-ionized water, deployed in monitoring wells and allowed to equilibrate for a minimum of two weeks prior to retrieving and collecting groundwater samples. Groundwater sampling activities using PDBs

were performed in accordance with the NJDEP FSPM (NJDEP, 2009) and the SAP. Vertical profiling of well screens for each fully saturated five foot interval was performed, where required, during the annual (fourth quarter) 2014 groundwater sampling event. If vertical profiling had previously been performed on a particular well, it was not repeated.

A groundwater sampling summary, including the Site name, well ID, analytical analysis, sampling method, and the sample date, is presented in **Table 2**.

ALS Environmental of Rochester, NY (NJ cert. #NY004) served as the primary analytical laboratory for the 2014 annual (fourth quarter) groundwater sampling event. Samples were shipped on ice under chain of custody to ALS Environmental via FedEx. Accutest Laboratories (Accutest) of Dayton, NJ (NJ cert. #12129) served as the quality assurance (QA) laboratory. Five percent of groundwater samples collected were "split" and submitted to both ALS Environmental and Accutest consistent with the SAP. Both ALS Environmental and Accutest are Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) and National Environmental Laboratory Accreditation Program (NELAP) certified laboratories that follow the project specifications of the DOD Quality Systems Manual (QSM) Version 4.1 or the latest version.

Water generated during the groundwater sampling was passed through portable granular activated carbon buckets and discharged to the ground surface adjacent to the well sampled.

2.1.3.1 Groundwater Sampling at FTMM-54

Quarterly groundwater monitoring occurred at FTMM-54 from June 1994 to May 2011 and in 2013 for a baseline sampling event using a network of up to seven monitoring wells. Four of the wells have been historically sampled in association with FTMM-18 to provide groundwater quality data since the former fuel distribution piping associated with FTMM-54 extended beneath the southwestern portion of FTMM-18. One volatile organic compound (benzene) exceeded the NJDEP Groundwater Quality Standards (GWQS) but the exceedances is limited to one monitoring well (296MW06) located within the footprint of FTMM-18. The suspected source of the VOCs are attributed to the numerous fuel spills that occurred during use of diesel and gasoline generators to support field exercises at FTMM-18. The NJDEP approved the no further action for groundwater at FTMM-54 in a letter dated February 4, 2015 based on the VOCs detected in the groundwater at well 296MW06 and will be addressed under the FTMM-18 site. Monitoring of the groundwater was discontinued in 2014 for FTMM-54 and the sampling of wells (296MW04 and 296MW06) is being performed under the FTMM-18 site.

2.1.3.2 Groundwater Sampling at FTMM-56

Based on the August 2013 Baseline Groundwater Sampling Report, one additional round of groundwater monitoring was recommended for FTMM-56 to confirm the August 2013 sampling results, however this was not completed during the 2014 annual (fourth quarter) sampling event. For the 2015 annual sampling event, lead analysis is recommended for one additional sampling event from monitoring well 80MW05 and pesticide analysis is recommended for one sampling round at 80MW02 due to the historical chlordane exceedances. Monitoring wells will be sampled via LFPS methodology.

2.1.4 QA/QC Sampling

Quality Assurance/Quality Control (QA/QC) samples were collected in accordance with the NJDEP FSPM and the Quality Assurance Project Plan (QAPP), which is included as part of the SAP.

2.2 DEVIATIONS FROM QAPP AND SAP

Deviations from the SAP for this sampling event are summarized in **Table 3**. In general, there were no significant deviations that could have adversely affected the sampling procedures or the results of the groundwater sampling presented in this report.

2.3 USABILITY OF LABORATORY ANALYTICAL DATA

A Level IV validation was performed on analytical data collected during the annual (fourth quarter) 2014 groundwater sampling event. Per the project QAPP, the validation for Long Term Monitoring Data includes a minimum of one report per sampling event or 33% of the data throughout the project, whichever is less. The data submitted by the laboratory has been reviewed and validated as per the SAP and was found to be usable for the purposes of this project. The Data Validation and the Data Verification Summary Reports are provided in **Appendix O** and complete laboratory analytical reports for groundwater samples collected are provided in **Appendix P** (on CD). The data validation performed meets the substantive requirements of the NJDEP's *Analytical Laboratory Data Generation, Assessment, and Usability Technical Guidance* (April 2014).

3.0 APPLICABLE REMEDIAL STANDARDS

For FTMM, the applicable remediation standards for groundwater are the NJDEP GWQS for Class IIA waters and the United States Environmental Protection Agency (USEPA) Maximum Contaminant Levels (MCLs) for Chemical Contaminants at Superfund Sites for Tap Water.

Both the GWQS and the USEPA MCL are provided in historical and 2014 groundwater data tables for reference purposes. If a chemical compound has a GWQS, then that standard is used and where the USEPA MCLs are applicable for those compounds where a GWQS is not established.

In a July 3, 2014 comment letter, the NJDEP agreed that metals at FTMM-02, FTMM-04, FTMM-08 (with the exception of lead), FTMM-12 (with the exception of lead), FTMM-25, FTMM-54, FTMM-55, FTMM-67, and FTMM-64, are indicative of background conditions and therefore sampling for metals maybe discontinued for these sites. In this Annual (Fourth Quarter) 2014 Groundwater Sampling Report, background groundwater concentrations of metals, are provided in the analytical results tables for comparison at FTMM-03, FTMM-08, and FTMM-57 where samples were submitted for metals analysis.

3.1 ANOMALOUS RESULTS

An anomaly is an exceedance of the applicable criteria that is not attributable to background concentrations and/or Site contamination. It typically succeeds and precedes non-exceedance sample results and is not representative of historical data for that location. Anomalies can be caused by sample equipment, laboratory equipment, seasonality changes, etc. For the purposes of this report, analytes noted as anomalies will not be considered part of the long term monitoring plan for that site. No anomalous results were reported during this annual sampling event.

4.0 FINDINGS AND RECOMMENDATIONS

Each of the 14 Sites will be discussed as individual Appendices to this report. As part of each Appendix, Findings and Recommendations are presented for that Site. The recommendations provided are for sampling in 2015 to allow for the continued monitoring of groundwater conditions. Remedial investigations are ongoing at several of the sites and these recommendations may be modified based on analysis of new information and evaluation of risk.

For each of the 14 sites, historical data from the last four previous quarterly sampling events or the last two annual sampling events (in this case the last sampling event for 2010/2011 and 2013 baseline sampling event) along with data collected during the annual 2014 sampling event, were evaluated to determine if further sampling is warranted or maybe reduced. Analytical results were evaluated to determine if the detection was an anomaly, potentially part of an overall trend, or affected by seasonal changes. The 2014 groundwater sampling results for each of the 14 sites will be discussed as an individual Appendix to this report. A summary of long term groundwater monitoring recommendations for 2015 is presented in **Table 4.**

Wells have been discontinued based on recommendations in the 2013 Baseline Groundwater Sampling Report as approved by the NJDEP in the February 5, 2015 comment letter.

*indicates select wells installed at FTMM-54 have been historically sampled in association with FTMM-18 since they are located in or near the boundary of FTMM-18 and now will be sampled under FTMM-18.

Notes:
MWs = monitoring wells
N/A = not applicable
VOCs = volatile organics compounds
SVOCs = semi-volatiles organic compounds
TMB = trimethhylbenzene
VC = vinyl chloride
TCE = tetrachloroethene
PCE = tetrachloroethene
1,1-DCA = 1,1-dichloroethane
1,2-DCA = 1,2-dichloroethane
TBA = tert-Butyl Alcohol

1. Exceedance is defined as a parameter that was greater than NJDEP GWQS or EPA MCL if a NJDEP GWQS has not been established for a compound.
2. The recommendations are for sampling in 2015 to allow for the continued monitoring of groundwater conditions. Remedial investigations are ongoing at many of the sites and these recommendations may be modified based on analysis of new information and evaluation of risk.
3. Comparison between highest historic concentrations and 2014 (Fourth Quarter) highest concentration.

Lab Qualifiers
J = Estimated (detect or non-detect) value
D = Results from dilution of sample
E = Estimated result
JN = Tentatively identified compound, estimated concentration

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-02 were gauged on September 30, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 3.29 (M2MW06) to 10.00 (M2MW16) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow directions are to the north-northwest, as shown in **Figures 2 and 3**, respectively.

During the groundwater gauging, the physical condition of FTMM-02 monitoring wells were assessed. However, M2MW08 was not located during this field effort and is only used for gauging purposes. The remaining site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from six monitoring wells located at FTMM-02 as part of the annual 4th quarter 2014 groundwater sampling event. FTMM-02 is sampled on an annual basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-02, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed September 30, 2014 and October 1, 2014, and samples were retrieved on December 18, 2014. A PDB sampling summary is provided in **Table 2**. Additionally, the wells were profiled, as necessary based on the saturated screen length of five feet, because this was the first time the wells were sampled using PDB. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

Groundwater monitoring has been conducted at FTMM-02 since May 1997. From May 1997 to March 2004, groundwater sampling consisted of VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals. From June 2004 to December 2009, FTMM-02 monitoring wells were sampled primarily for VOCs. Since December 2010, the last four historical rounds of groundwater sampling have been carried out on a quarterly basis and were comprised of VOC and metals analysis. Historical groundwater analytical results are presented in **Table 3.**

Historically, benzene, chlorobenzene, *tert*-butyl alcohol, aluminum, arsenic, beryllium, chromium, iron, lead, manganese, sodium and vanadium were detected above their respective NJDEP Ground Water Quality Standard (GWQS). Additionally, beryllium, manganese and

sodium were detected in exceedance of their background concentration and are attributed to natural sources from the glauconitic soils beneath the site and are not indicative of historical site uses.

In August 2013 during the baseline sampling event, sixteen monitoring wells were sampled for VOCs and pesticides. Benzene and chlorobenzene were the only VOCs detected in M2MW03 in exceedance of their NJDEP GWQS during the sampling event. Pesticides were not detected in FTMM-02 monitoring wells during the sampling event and groundwater monitoring for pesticides was discontinued in 2014. Results of the August 2013 Baseline Sampling Event are presented in **Table 4**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 10 out of the 16 groundwater monitoring wells were removed from the long term monitoring program (LTM) including M2MW02, M2MW04, M2MW05, M2MW06, M2MW07, M2MW08, M2MW09, M2MW12, M2MW13, and M2MW23, and monitoring for pesticides was discontinued.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Groundwater analytical results from the samples collected during the annual 2014 groundwater sampling event are presented in **Table 4.** Benzene was the only VOC detected during this sampling event. Benzene was detected at M2MW03 at an estimated concentration of 2.2J µg/L above the NJDEP GWQS of 1µg/L.

5.0 FINDINGS AND RECOMMENDATIONS

Historically, benzene (M2MW03, M2MW11, M2MW21, and M2MW24), chlorobenzene (M2MW03), and *tert*-butyl alcohol (M2MW22) were detected in exceedance of their NJDEP GWQS. During the annual 2014 sampling event, only benzene exceeded the NJDEP GWQS at monitoring well M2MW03. Benzene concentrations at M2MW03 appear to have stabilized between 4.99 µg/L (March 2010) and 2.2 µg/L (December 2014) based on the last four rounds of data. Monitoring wells M2MW11, M2MW21, M2MW22 and M2MW24 did not contain VOCs above the NJDEP GWQS during this sampling event or the August 2013 Baseline Sampling event.

Based on the collective groundwater analytical results, groundwater monitoring for VOCs will be continued for one additional round at monitoring wells M2MW11, M2MW21, M2MW22, and M2MW24. As per the NJDEP November 18, 2014 comment letter on the August 2013 Baseline Sampling Report, because this round may be a final sampling round for select monitoring wells at FTMM-02, the final sampling round will be conducted using low-flow purging and sampling (LFPS) methodology. Continued monitoring at monitoring wells M2MW03 and M2MW10 is also recommended. A review of the historical groundwater sampling results is presented in **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analysis.

Notes:
1) The synoptic round of water levels in the wells was collected on September 30, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
* Well was not located during the synoptic round of water levels

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Table 3
Historical Groundwater Analytical Results

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Sample M2MW01 (4th Quarter 2010) has metals results but not VOCs. Values left blank for missing data.

Sample M2MW05 Duplicate (2nd Quarter 2011) had an elevated sample detection limit due to difficult sample matrix.

Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.
5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
6) NA = Not Analyzed

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

7) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####
NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represents a result that is above the USEPA 2014-05 MCL. ###

8) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/

9) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-02 Closed Solid Waste landfill
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results[1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, Identify Compound)[1]	Do Metals Exceed FTMM Background Concentration Yes or No (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-02									
M2MW03	VOC	Benzene, Chlorobenzene	N/A	No	No	Yes	No	Yes	Continue monitoring for VOCs.
M2MW10		No	N/A	No	No	No	Yes	Yes	Well to be retained for down gradient monitoring of benzene.
M2MW11		Benzene	N/A	No	No	Yes	No	Yes	One additional round of monitoring for VOCs.
M2MW21		Benzene	N/A	No	No	Yes	N/A	Yes	One additional round of monitoring for VOCs.
M2MW22		tert-butyl alcohol	N/A	No	No	Yes	N/A	Yes	One additional round of monitoring for VOCs.
M2MW24		Benzene	N/A	No	No	Yes	N/A	Yes	One additional round of monitoring for VOCs.

Notes:

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds?
3. N/A = Not Applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report monitoring wells M2MW02, M2MW04, M2MW05, M2MW06, M2MW07, M2MW08, M2MW09, M2MW12, M2MW13, and M2MW23 were removed from the long term monitoring program for 2014 at FTMM-02. Groundwater monitoring for pesticides and metals were also discontinued in 2014 based on the NJDEP approval letter.

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-2
3. Well Designation: M2MW03
4. Well Permit Number: 2732586

5 Type of Well ☑Monitoring ☐Extraction ☐Residential ☐Public Supply ☐Irrigation ☐Other

6 Well Surface Finish ☑Stick Up ☐Flush Mount

7 Location of Measuring Point ☑Top of Casing ☐Other (specify) _____

8 **NOTE:** PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below any differences between the measuring point identified above and actual ground surface at the well head.

Distance between measuring point and ground surface (ft.) 1.48

9 Total Well Depth (fbgs) 15.62

10 Screened interval/open hole (fbgs) 5.62 - 15.62

11 Well Casing Diameter 4 Material ☑PVC ☐Carbon Steel ☐Stainless Steel

12 Well Screen (or open hole diameter) Diameter 4 Material ☑PVC ☐Carbon Steel ☐Stainless Steel

13 Screen Size (slot) Screen Slot Size _____

14. Date and Time of Deployment Date: 9/30/14 Time: 1604

15. Depth to Ground Water Depth to ground water at time of deployment 6.32 bgs

16. Date and Time of Retrieval Date: 10/18/14 Time: 1450

17. Depth to Ground Water Depth to ground water at time of retrieval 6.91 TOC

18. Type of Deployment Line Used Diameter: 3/16 Material: poly

19 Material and Mass (oz.) of PDBS Weight Stainless 20 oz (stainless steel recommended)

20 Type of PDBS Used
☐Lab Filled (Modified Trip Blank must be taken at time of deployment)
☑Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)

21 Dimensions of PDBS Length (in.) 12 Diameter (in.) 1.5 Filled _____

22 Position of PDBS Weight
☑Attached to bottom of PDBS and suspended in well
☐Attached to bottom of deployment line and suspended in well
☐Attached to bottom of deployment line and resting on bottom of well (preferred)

23 Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
10.27			
5th PDBS	**6th PDBS**	**7th PDBS**	**8th PDBS**

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
☑**No**, this well is being profiled during this sampling round
☐**Yes**, this well was profiled already. Date when well was profiled: _____

25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
☐**No**, flow testing has not been conducted in this well
☐**Yes**, flow testing of this well was conducted. Date of testing: _____
Type of flow meter used: _____
Measurements taken every _____ feet **[Please Attach Results]**

26. Weather Conditions During Deployment Temp. 70°F Wind 0-5mph ☐Sunny ☑Overcast ☐Raining ☐Snowing

27. Weather Conditions During Retrieval Temp. 40°F Wind 10-15mph ☑Sunny ☐Overcast ☐Raining ☐Snowing

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-03 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 1.66 (M3MW07) to 8.24 (M3MW02) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the north towards Lafetra Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-03 monitoring wells was assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells located at FTMM-03 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-03 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low flow purging and sampling (LFPS). Groundwater samples were collected from wells M3MW02 and M3MW07 on October 2, 2014 and October 3, 2014. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C. The groundwater sample from M3MW02 was also analyzed for Target Analyte List (TAL) metals via USEPA Method SW6010C/SW7470A, as it was not sampled during the 2013 event due to a low water column and silty conditions.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

Groundwater sampling has been conducted at monitoring wells associated with the FTMM-03 Landfill site since May 1999. Between May 1999 and September 2004, monitoring wells were sampled for VOCs, semi-volatile organic compounds (SVOCS), pesticides, polychlorinated biphenyls (PCBs), and metals. From December 2004 to December 2009, wells were only sampled for VOCs. Between March 2010 and October 2010, FTMM-03 monitoring wells were sampled for VOCs and metals.

Since December 2010, the last four historical rounds of groundwater sampling have been carried out on a quarterly basis and were comprised of VOC and metals analysis. In these last four rounds of groundwater sampling at FTMM-03, metals including aluminum, arsenic, antimony, beryllium, cadmium, iron, manganese, lead, and sodium were detected above their

respective NJDEP Groundwater Quality Standards (GWQS). However, only cadmium was detected above its background concentration established in the 1995 Weston Report (9.50 µg/L) in monitoring wells M3MW04 (12 µg/L and 13.6 µg/L) and M3MW07 (11.2 µg/L). The cadmium detections were anomalous and attributed to background conditions based on further review of the historical data and not associated with historical site operations.

Vinyl chloride (VC) was detected above its NJDEP GWQS in FTMM-03 monitoring well M3MW07 for three out of the last four historical sampling events. Analytical data for the last four historical sampling events are provided in **Table 2**.

The trend of historical VC above the NJDEP GWQS in M3MW07 continued during the August 2013 Baseline Sampling Event (**Table 3**). Since October 23, 1998, vinyl chloride has only been detected in ground water samples collected from M3MW07. This monitoring well is proximate to Lafetra Creek and was sampled on a quarterly basis. Vinyl chloride was detected in 13 of the first 29 groundwater sampling events (maximum of 33.27 µg/L). On November 7, 2005, vinyl chloride became a COC when the NJDEP decreased the NJDEP GWQS to 1 µg/L. Since March 2006, vinyl chloride has been detected at M3MW07 in every quarterly groundwater sampling event through the September 2010 event at concentrations exceeding NJDEP GWQS.

In November 2009, the Army conducted a groundwater investigation in an effort to determine the source and extent of the vinyl chloride detected in monitoring well M3MW07. Groundwater samples were collected from five temporary well point locations installed around the perimeter of M3MW07. Analytical results indicated that vinyl chloride was not detected in the groundwater samples collected.

Given that vinyl chloride was not detected in the groundwater samples collected from the five temporary monitoring points, nor from any of the surface water samples (the monitoring well is adjacent to the stream), the Army believed the source of the vinyl chloride was anomalous and may have been from leaching from the poly vinyl chloride (PVC) pipe used to construct monitoring well M3MW07. To determine if the vinyl chloride result in M3MW07 was anomalous, a new monitoring well, M3MW07A, was installed by the Army adjacent to the existing M3MW07. On August 21, 2010, monitoring well M3MW07A was sampled for VOCs, with a 15-peak library search (VO+15). Analytical results indicated vinyl chloride was non-detect in the sample collected form M3MW07A. This well was also sampled during the August 2013 Baseline Groundwater Sampling Event and vinyl chloride was not detected in the sample. In the July 3, 2014 letter (**Appendix Q**), the NJDEP requested the analytical data and a site map showing the location the temporary wells points prior to their approval of abandoning well M3MW07. This requested information was submitted to the NJDEP in the Army's November 26, 2014 letter response to NJDEP comments on the Final Baseline Groundwater Sampling Report (August 2013). As a result of the Army's groundwater investigation and as previously stated in the August 2013 Baseline Sampling Report, vinyl chloride is not considered a landfill COC at FTMM-03 and is not representative of groundwater conditions in the area.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 11 out of the 12 groundwater monitoring wells were removed from the long term monitoring (LTM) program including: M3MW04, M3MW05, M3MW06, M3MW07A, M3MW08, M3MW09, M3MW10, M3MW11,

M3MW12, M3MW13, and M3MW14; and metals analysis was discontinued with the exception of MW3MW02.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Groundwater analytical data for samples collected from M3MW02 and M3MW07 during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**. The only VOC found to be above its NJDEP GWQS was vinyl chloride, detected at an estimated concentration of 4J µg/L in M3MW07, which confirms the previous anomalous detection in this well, but is not representative of groundwater conditions in the area.

Aluminum was the only metal detected in the sample from M3MW02; at a concentration of 685 µg/L, which is above of the NJDEP GWQS of 200 µg/L.

5.0 FINDINGS AND RECOMMENDATIONS

The 2014 Groundwater Sampling Program implemented for the two monitoring wells sampled provides results that define the path forward for the long term monitoring program at FTMM-03.

VOCs were not detected at this well above their NJDEP GWQS. Aluminum was the only metal detected above the NJDEP GWQS at M3MW02 and is attributed to the abundance of this metal in glauconitic soils that underlie the Site and not indicative of groundwater contamination from historical Site uses.

Based on the NJDEP February 5, 2015 letter (**Appendix Q**) discussed in Section 3.0 and the analytical results, M3MW07 will be properly abandoned.

A review of the historical groundwater sampling results is presented in **Table 4**, which provides the matrix used to determine the status of the wells relative to the future groundwater sampling and analysis. Based on the collective results provided in this Annual (Fourth Quarter) 2014 Sampling Event, it is recommended that all groundwater sampling be discontinued at FTMM-03.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

DUP = field duplicate sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

DUP = field duplicate sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

DUP = field duplicate sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

DUP = field duplicate sample

Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###
n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Site Name/ Well ID	Interpretation of Historical and 2014 Results[1]			2014 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-03									
M3MW02	VOC/Metals	Al	No	No	No	No	No	No	No metal exceedances above background concentration. Recommend removing well from long term monitoring program.
M3MW07	VOC	VC	N/A	No	Yes	No	No	No	VC is anomalous and not representative of groundwater conditions. Data from M3MW07A is representative of this area. Well M3MW07 will be abandoned per NJDEP 2/5/15 letter.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. VC - vinyl chloride
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wellsM3MW04, M3MW05, M3MW06, M3MW07A, M3MW08, M3MW09, M3MW10, M3MW11, M3MW12, M3MW13, and M3MW14 were removed from the long term monitoring sampling program and metals (except for M3MW02) were discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-05 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 0.34 (M5MW14) to 10.73 (M5MW15) feet above mean sea level (amsl). The inferred shallow flow direction is to the north-northwest towards Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-05 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from four monitoring wells located at FTMM-05 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-05 is sampled on an annual basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-05, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed October 1, 2014 and samples were retrieved on December 19, 2014. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From May 1997 to July 2003, groundwater monitoring wells were sampled for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and metals at FTMM-05. From July 2003 to December 2009, monitoring wells were sampled solely for VOCs, and from December 2009 to June 2011, monitoring wells were sampled for VOCs and metals.

Since July 2011, the last four historical rounds of groundwater sampling were conducted on a bi-monthly basis and have been comprised of VOC and metals analysis. Several metals were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS) including aluminum, arsenic, iron, lead, manganese, and sodium. However, these metals did not exceed their background concentration established in the 1995 Weston Report.

FTMM-05 monitoring wells M5MW11, M5MW16, M5MW19, M5MW20, and M5MW23 exhibited detections above the NJDEP GWQS of either tetrachloroethene (PCE),

trichloroethene (TCE), vinyl chloride (VC) or a combination of these compounds within the last four historical groundwater monitoring events. Historical groundwater analytical results are presented in **Table 3**.

Groundwater analytical data from samples collected from 10 monitoring wells during the August 2013 event are presented in **Table 4**. Monitoring wells sampled in 2013 exhibited detections above the NJDEP GWQS for PCE (M5MW11, M5MW23), TCE (M5MW20, M5MW23), or VC (M5MW16). The detections from August 2013 appear to be part of a trend of low-level VOC exceedances.

The Final August 2013 Baseline Groundwater Sampling Report was approved by the NJDEP in their February 5, 2015 letter. Based on this approval, 6 out of the 10 groundwater monitoring wells were removed from the long term monitoring program including M5MW10, M5MW12, M5MW13, M5MW14, M5WM18 and M5MW19.

4.0 ANNUAL 2014 (FOURTH QUARTER) GROUNDWATER RESULTS

Groundwater analytical data from the four samples collected during the annual 2014 event are presented in **Table 4**. PCE was detected in the four samples (M5MW11 [1.8J µg/L], M5MW16 [1.7J µg/L], M5MW20 [1.2J µg/L] and M5MW23 [23 µg/L]) at concentrations above the NJDEP GWQS of 1 µg/L. TCE was also detected at M5MW23 with an estimated concentration of 2.8J µg/L above the NJDEP GWQS of 1 µg/L. These detections are located upgradient of and limited to the northern portion of the FTMM-03 landfill.

5.0 FINDINGS AND RECOMMENDATIONS

Historically PCE (M5MW11, M5MW16, M5MW20, and M5MW23) and TCE (M5MW23) have been detected in the groundwater in exceedance of their NJDEP GWQS, respectively. The concentrations appear to be part of an overall trend of low-level VOC exceedances above the NJDEP GWQS with the exception of M5MW23. While TCE concentrations at M5MW23 are part of this same trend, PCE has fluctuated over time ranging from 1.76J µg/L (December 2009) to 50 µg/L (August 2013). Based on the available historical information the fluctuations do not appear to be seasonal. Additionally, PCE concentrations at M5MW23 have decreased from the August 2013 detection of 50 µg/L.

Based on the annual 2014 results, it is recommended that groundwater sampling be continued at M5MW11, M5MW16, M5MW20, and M5MW23 for the analysis of VOCs. These wells will continue to be sampled via PDBs. A review of the historical groundwater sampling results is presented in **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analysis.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result
b - Elevated sample detection limit due to difficult sample matrix
MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP = NJDEP Ground Water Quality Standards as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

b - Elevated sample detection limit due to difficult sample matrix

MCLs for bromodichlormethane and chloroform are for total trihalomethanes

Table 4
Groundwater Analytical Results - 2013 and 2014
Site FTMM-05 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-05 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-05									
M5MW11	VOC	PCE	N/A	No	No	Yes	N/A	Yes	PCE exceedance part of low-level trend
M5MW16		TCE, PCE,VC	N/A	No	No	Yes	N/A	Yes	PCE exceedance part of low-level trend
M5MW20		PCE, TCE	N/A	No	No	Yes	N/A	Yes	PCE exceedance part of low-level trend
M5MW23		PCE, TCE	N/A	No	No	Yes	N/A	Yes	TCE and PCE part of overall exceedance trend.

Notes

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds ?
3. PCE - tetrachloroethene
4. TCE - trichloroethene
5. VC - vinyl chloride
6. N/A = Not applicable
7. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells M5MW10, M5MW12, M5MW13, M5MW14, M5WM18 and M5MW19 were removed from the long term monitoring sampling program.

Attachment A NJDEP PDB Checklists

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-5
3. Well Designation: M5MW11
4. Well Permit Number: 29-32575

5 Type of Well: ☒ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other

6 Well Surface Finish: ☒ Stick Up ☐ Flush Mount

7 Location of Measuring Point: ☒ Top of Casing ☐ Other (specify) _____

8 **NOTE**: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.

Distance between measuring point and ground surface (ft.) 1.9

9 Total Well Depth (fbgs): 15.15

10 Screened interval/open hole (fbgs): 5.15 - 15.15

11 Well Casing: Diameter 4 Material ☒ PVC ☐ Carbon Steel ☐ Stainless Steel

12 Well Screen (or open hole diameter): Diameter 4 Material ☒ PVC ☐ Carbon Steel ☐ Stainless Steel

13 Screen Size (slot): Screen Slot Size 0.01

14 Date and Time of Deployment: Date: 10/1/14 Time: 1320

15 Depth to Ground Water: Depth to ground water at time of deployment 5.34

16 Date and Time of Retrieval: Date: 12/19/14 Time: 0823

17 Depth to Ground Water: Depth to ground water at time of retrieval 6.44 TOC

18 Type of Deployment Line Used: Diameter: 3/16" Material: poly

19 Material and Mass (oz.) of PDBS Weight: 20oz Stainless (stainless steel recommended)

20 Type of PDBS Used:
☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
☒ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)

21 Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____

22 Position of PDBS Weight:
☒ Attached to bottom of PDBS and suspended in well
☐ Attached to bottom of deployment line and suspended in well
☐ Attached to bottom of deployment line and resting on bottom of well (preferred)

23 Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-08 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 1.80 (M8MW18) to 5.49 (M8MW12) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the north-northwest towards Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-08 monitoring wells were assessed. The site monitoring wells were found to be in good condition, however monitoring well M8MW11 could not be visually located due to vegetative overgrowth and therefore was not gauged or sampled.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from seven monitoring wells located at FTMM-08 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-08 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells M8MW12, M8MW15, M8MW16, M8MW17, M8MW21, RM8MW24 and 697MW01 on October 1, 2014 and October 2, 2014. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C at wells M8MW12, M8MW15, M8MW16, RM8MW24 and 697MW01. The groundwater samples from 697MW01, M8MW17 and M8MW21 were also analyzed for lead via USEPA Method SW6010C. In addition, the groundwater sample from 697MW01 was analyzed for pesticides via EPA Method 8081B. It should be noted that 697MW01 was not located in 2013, but was located and sampled for the 2014 sampling event.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From June 1997 to March 2004, groundwater samples were collected for VOCs, semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides from FTMM-08 monitoring wells. From June 2004 to December 2009, monitoring wells were primarily sampled for VOCs. From March 2010 to September 2010, groundwater samples were collected for VOC and metals.

From December 2010 to August 2011, the last four historical rounds of groundwater sampling conducted at the FTMM-08 site have consisted of VOC and metals analysis and were conducted on a quarterly basis. During this period, several metals including aluminum, arsenic, barium, calcium, iron, lead, manganese, magnesium and sodium were detected above of their respective NJDEP Ground Water Quality Standards (GWQS) in the majority of the Site monitoring wells. Beryllium, cadmium, chromium, calcium, magnesium, manganese, lead and sodium were detected in FTMM-08 monitoring wells above their background concentration established in the 1995 Weston Report. However, these metals are not associated with historical site operations.

Between December 2010 and August 2011, benzene (M8MW11 and M8MW15) and tetrachloroethene (PCE) (M8MW12 and 697MW01) were detected above their NJDEP GWQS of 1 µg/L. Historical groundwater analytical results are presented in **Table 2**.

Groundwater analytical data from samples collected from 13 monitoring wells during the August 2013 event are presented in **Table 3**. Groundwater samples were analyzed for VOCs, pesticides, and lead. PCE was detected at an estimated concentration of 1.3J µg/L in M8MW12, which is above the NJDEP GWQS of 1 µg/L for PCE. There were no pesticides or lead detections above the NJDEP GWQS in the August 2013 baseline groundwater sampling event.

The Final August 2013 Baseline Groundwater Sampling Report was approved by the NJDEP in their February 5, 2015 letter. Based on this approval, six monitoring wells out of the 14 monitoring wells were removed from the long term monitoring program including M8MW13, M8MW14, M8MW18, M8MW19, M8MW20, and M8MW22. Additionally, groundwater monitoring for pesticides and metals other than lead were discontinued for all remaining wells, except 697MW01.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Groundwater analytical data from samples collected from seven monitoring wells during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**. Groundwater samples were analyzed for VOCs at wells M8MW12, M8MW15, M8MW16, RM8MW24 and 697MW01. Tetrachloroethene (PCE) was the only VOC detected at an estimated concentration of 1.3J µg/L and 1.6J µg/L at monitoring wells M8MW12 and 697MW01, respectively, only slightly above the NJDEP GWQS of 1 µg/L. The groundwater samples from 697MW01, M8MW17 and M8MW21, were also analyzed for lead and it was not detected in the samples. In addition, the groundwater sample from 697MW01 was analyzed for pesticides, 4'4-DDD was detected at a concentration of 0.83 µg/L, above the NJDEP GWQS of 0.1 µg/L.

5.0 FINDINGS AND RECOMMENDATIONS

Based on the historical and annual 2014 groundwater sampling results, continued sampling for select wells is recommended at FTMM-08 using LFPS methods. Sampling at M8MW11 for lead and VOCs will be resumed once the monitoring well is located. Based on 2014 PCE

detections slightly above the NJDEP GWQS of 1 µg/L sampling for VOCs only will continue at M8MW12.

Based on 2014 concentrations, PCE and 4'4-DDD in 697MW01 exceeded their NJDEP GWQS of 1 µg/L and 0.1 µg/L respectively, and sampling for VOCs and pesticides will continue at this well. Sampling for lead at this well will be discontinued, since historically lead has not been detected at 697MW01.

Historically, lead has been detected above the NJDEP GWQS at monitoring wells M8MW17 and M8MW21. However, lead has not been detected above its NJDEP GWQS of 5 µg/L in the last three sampling event at these wells. Therefore it is recommended that groundwater sampling at monitoring wells M8MW17 and M8MW21 be discontinued and these wells be removed from the monitoring program.

Historically, benzene has been detected slightly above its NJDEP GWQS at monitoring wells M8MW15 and M8MW16. However, benzene has not been detected in the last three sampling events above its NJDEP GWQS of 1 µg/L at these two wells. In addition, VOCs have not been detected above the NJDEP GWQS in the samples collected from RM8MW24 during the last three sampling events. Therefore it is recommended that groundwater sampling at monitoring wells M8MW15, M8MW16 and RM8MW24 be discontinued and these wells be removed from the monitoring program.

A review of the historical groundwater sampling results is presented in **Table 4**, which provides the matrix used to determine the status of the wells relative to the future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available, well not located in the field
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

/a = Elevated sample detection limit due to difficult sample matrix

Table 3
Groundwater Analytical Results - 2013 and 2014
Site FTMM-08 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Well sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-08 Closed Solid Waste Landfill
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results[1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does a Compound Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect? (Y/N)[2]	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-08									
697MW01	VOCs, Pb, and pesticides	Beta-BHC, alpha- and gamma- chlordane, 4-4'-DDD, 4-4'-DDT, Dieldrin, heptachlor, PCE	No	No	No	Yes	No	Yes (VOCs, and pesticides)	Well could not be located and was not sampled in August 2013. Well located and sampled in October 2014. Beta-BHC, alpha- and gamma- chlordane, 4-4'-DDT, Dieldrin, and heptachlor exceed NJDEP GWQS in 2009 (last sampling event) 4-4' DDD and PCE were above standard in 2014.
M8MW11	N/A	N/A	N/A	N/A	N/A	N/A	N/A	Yes (VOCs and Pb)	Continue sampling for Pb and VOCs. Well could not be located and was not sampled in October 2014. Mn and Na are considered background concentrations and are not related to site historical use.
M8MW12	VOCs	PCE	N/A	No	No	Yes	No	Yes (VOCs only)	PCE exceeded in 2013 and 2014. Na is considered a background concentration and not from historical site use.
M8MW15	VOCs	No	N/A	No	No	No	No	No	Discontinue monitoring well. Ca, Mn and Na are considered background concentrations and are not related to site historical use.
M8MW16	VOCs	No	N/A	No	No	No	No	No	Discontinue monitoring well. Ca, Mg, Mn and Na are considered background concentrations and are not related to site historical use. Benzene will continue to be sampled.
M8MW17	Pb	No	N/A	No	No	No	No	No	Discontinue monitoring well. Ca, Mn and Na are considered background concentrations and are not related to site historical use.
M8MW21	Pb	No	N/A	No	No	No	No	No	Discontinue monitoring well. Be, Cd, Cr, Mn and Na are considered background concentrations and are not related to site historical use.
RM8MW24	VOCs	No	N/A	No	No	No	No	No	Discontinue monitoring well. Fe, Mn and Na are considered background concentrations and are not related to site historical use.

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list.
   b. If no then remove this analyte from LTM list.
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the compounds exceeded the NJDEP GWQS seasonally (winter/spring vs. summer/fall) for the 4 previous data rounds?
3. N/A = Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells M8MW13, M8MW14, M8MW18, M8MW19, M8MW20, and M8MW22 were removed from the long term monitoring sampling program. Additionally groundwater monitoring for pesticides and metals other than lead were discontinued for all remaining wells, except 697MW01.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located at or near FTMM-18 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 0.79 (MP18MW24) to 4.98 (M18MW23) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is to the north-northwest towards Parkers Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition monitoring wells at or near FTMM-18 were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from four monitoring wells (296MW04, 296MW06, M18MW22 and M18MW23) located at FTMM-18 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-18 is sampled on an annual basis. The groundwater sampling program included measuring the depths to water in monitoring wells and the sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed October 1, 2014 and samples were retrieved on December 19, 2014. A PDB sampling summary is provided in **Table 2**. Additionally, monitoring wells 296MW04, 296MW06, and M18MW23 were profiled because this is the first time the wells were sampled using PDB methods. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From June 1997 through November 2004, FTMM-18 monitoring wells were sampled for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and metals. From February 2005 to September 2010, monitoring wells were sampled primarily for metals.

In the last four historical rounds of groundwater sampling conducted on a monthly basis at FTMM-18 from October 2010 to April 2011, samples were analyzed for VOCs and metals. Several metals including aluminum, beryllium, cadmium, iron, manganese, nickel, and sodium were detected above their respective NJDEP Ground Water Quality Standards (GWQS). However, only antimony, beryllium, manganese and sodium were detected at concentrations greater than their background concentrations established in the 1995 Weston Report. The background concentration for sodium however is lower than the NJDEP GWQS. Elevated

sodium concentrations are most likely attributable to the site's proximity to the ocean and other estuarine water bodies. Glauconitic sediments underlying the site are rich in antimony, beryllium and manganese, resulting in high concentrations of these analytes in groundwater. Historical groundwater analytical results are presented in **Table 3.**

Additionally, within the four most recent historical rounds of sampling (October 2010 – April 2011), benzene was detected in 18MW22 (1.58 µg/L to 1.99 µg/L) and M18MW23 (664.44 µg/L to 1,078.96 µg/L) above its NJDEP GWQS of 1 µg/L.

Groundwater samples were collected for only VOCs analysis in August 2013. 1,2-dichloroethane (1,2-DCA) was detected in the two PDB samples collected from M18MW22 above its NJDEP GWQS of 2 µg/L; concentrations ranged from 13 µg/L to 26 µg/L. Additionally, benzene was detected in only one of the PDB samples in M18MW22 and at a concentration of 0.37 µg/L, below its NJDEP GWQS of 1 µg/L. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 4**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, two out of the four groundwater monitoring wells were removed from the long term monitoring (LTM) program including MP18MW24 and MP18MW25.

Four (296MW03, 296MW04, 296MW06, and 296MW07) of seven monitoring wells originally installed for FTMM-54 and have been historically sampled in association with FTMM-18 to provide groundwater quality data since the former fuel distribution piping associated with FTMM-54 extended beneath the southwestern portion of FTMM-18. One VOC (benzene) exceeded the NJDEP GWQS but the exceedance is limited to well 296MW06 which is located in the footprint of FTMM-18. In a February 4, 2015 letter, the NJDEP issued a no further action for groundwater at FTMM-54 based on the VOCs detected in monitoring well (296MW06) are addressed under the FTMM-18 site since the suspected source of the impacts are attributed to the fuel spills that occurred during use of diesel and gasoline generators to support field exercises at FTMM-18.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Benzene was detected in only two (296MW06 and 18MW23) of the four wells sampled at concentrations above the NJDEP GWQS of 1 µg/L. Benzene was detected in the two PDB samples collected from 296MW06 at concentrations of 1.6 µg/L (sample depth of 5.07 ft.) and 15 µg/L (sample depth of 10.1 ft.), and M18MW23 at concentrations of 6.5 µg/L (sample depth of 16.22 ft.) and 9.1 µg/L (sample depth of 9.28 ft.). Groundwater analytical results for samples collected during the annual (fourth quarter) 2014 sampling event are presented in **Table 4**.

5.0 FINDINGS AND RECOMMENDATIONS

Due to the historical concentrations of 1,2-DCA and benzene detected above the NJDEP GWQS in M18MW22 and the 2014 benzene detection at M18MW23, continued sampling for VOCs is recommended at FTMM-18.

A comparison of 1,2-DCA and benzene results from historical LFPS sampling events (2010 though 2011 [**Table 3**]) to samples collected using the PDB method in 2013 and 2014 (**Table 4**) shows a decrease in concentrations at both monitoring wells M18MW22 and M18MW23. The decrease in concentrations is likely due to a combination of two primary factors: 1) natural degradation of the concentration between 2011 and 2013, and 2) a low-bias for results obtained using PDBs compared to LFPS. However, even though it has been shown that PDB results are biased slightly low, the PDBs provide reasonable and representative results for a long term monitoring program at FTMM-18. Therefore, these two wells will continue to be monitored using PDB sampling methodology on an annual basis. Monitoring will continue until VOCs are detected below the NJDEP GWQS for two sampling events, then a final round of samples will be collected using LFPS to confirm PDB analytical results.

A review of the historical groundwater sampling results is presented in **Table 5**, which provides the matrix used to determine the status of the future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

Notes:

Yellow highlight indicates an exceedence of NJDEP Class IIA GWQS
TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

Notes:

Yellow highlight indicates an exceedence of NJDEP Class IIA GWQS
TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

Notes:

Yellow highlight indicates an exceedence of NJDEP Class IIA GWQS
TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
dup = duplicate sample collected
ER - Estimated result
J - Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA - Not analyzed
ND - Not detected
NLE - No limit established
NR - Not reported

Groundwater Analytical Results - 2013 and 2014
Site FTMM-18 Closed Solid Waste Landfill/Former Training Area
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Site Name/ Well ID	Interpretation of Historical and 2014 Results[1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does a Compound Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect? (Y/N)[2]	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-18									
M18MW22	VOCs	1,2 DCA, Benzene	No	No	No	Yes	No	Yes (VOCs only)	
M18MW23		Benzene, carbon tetrachloride (minor detections)	No	No	No	Yes	No	Yes (VOCs only)	Historical carbon tetrachloride exceedance (minor detections). Benzene exceedence in 2014. Well could not be located and was not sampled in August 2013.
296MW04		No	N/A	No	No	No	Yes	Yes (VOCs)	Analyzed for VOCs as a downgradient delineation point.
296MW06		Benzene	N/A	No	No	Yes	No	Yes (VOCs)	Continued benzene exceedances.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. 1,2-DCA = 1,2-dichloroethane
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells MP18MW24, MP18MW25, 296MW01, 296MW02, 296MW03, 296MW07, and 296MW08 were removed from the long term monitoring sampling program for FTMM-18 and former FTMM-54, lead was also discontinued from the former FTMM-54 wells. Per the 2/4/15 groundwater NFA issued by the NJDEP at site FTMM-54, monitoring wells 296MW04 and 296MW06 have been incorporated into the FTMM-18 site.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-22 were gauged on September 30, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 47.57 (CW1MW39) to 51.97 (CW1MW30) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow directions are to the east, as shown in **Figures 2 and 3**, respectively.

During the groundwater gauging, the physical condition of FTMM-22 monitoring wells were assessed. The site monitoring wells were found to be in good condition. However, three wells (CW1MW35, CW1MW36 and CW1MW37) were found to have significant accumulations of silt within the well.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from six monitoring wells (CW1MW27, CW1MW28, CW1MW29, CW1MW31, CW1MW37, and CW1MW281) located at FTMM-22 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-22 is sampled on a quarterly basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-22, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed September 30, 2014 and samples were retrieved on December 18, 2014. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed PDB field sheets for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From April 1997 through February 2004, FTMM-22 monitoring wells were sampled primarily for VOCs, semi-volatile organic compounds (SVOCs) and metals. From March 2004 to January 2010, monitoring wells were sampled for VOCs. From April 2010 to August 2010, groundwater sampling consisted of VOCs and metals analysis.

In the last four historical rounds of groundwater sampling conducted on a quarterly basis from October 2010 to July 2011, samples were analyzed for VOCs and metals. Aluminum, antimony, arsenic, beryllium, cadmium, chromium, iron, lead, manganese, sodium and vanadium were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS). Arsenic, selenium, and sodium were detected at concentrations greater than their background concentration as established in the 1995 Weston Report in several

monitoring wells; however selenium and sodium have background concentrations lower than the NJDEP GWQS.

NJDEP approved a no further action determination for monitoring of metals in groundwater at FTMM-22, dated May 7, 2012, therefore metals analysis will be discontinued at the Site.

In samples collected during the quarterly sampling events from April 2008 to July 2011, trichloroethene (TCE) was detected above its GWQS of 1 µg/L at monitoring wells CW1MW27 (1.5 µg/L), CW1MW28 (1.64J - 13.15 µg/L) CW1MW29 (1.03 - 29.08 µg/L), CW1MW31 (1.82J - 14.95 µg/L), CW1MW37 (1.29J µg/L) and CW1MW281 (1.15J - 109.9D µg/L). Historical groundwater analytical results are presented in **Table 3.**

Groundwater analytical detections from samples collected during the August 2013 Baseline Sampling Event are presented in **Table 4**. Groundwater samples were analyzed for VOCs from 16 monitoring wells. TCE was detected above its GWQS of 1 µg/L in monitoring well CW1MW29 at an estimated concentration of 2.5J µg/L.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 12 out of the 18 groundwater monitoring wells were removed from the long term monitoring program (LTM) including: CW1MW26, CW1MW30, CW1MW32, CW1MW33, CW1MW34, CW1MW35, CW1MW36, CW1MW38, CW1MW39, CW1MW40, CW1MW282, and CW1MW291.

Groundwater sampling at FTMM-22 was conducted on a quarterly basis for 2014, in January, May, and September. This data is presented in reports submitted quarterly to the NJDEP. It should be noted that January 2014 and May 2014 sampling events also coincided with a remedial investigation (RI) conducted at the Site. NJDEP FSPM requires that RI related groundwater samples be collected using LFPS methods. Once the RI investigation samples were collected, PDB methods were used to collect the quarterly long term monitoring samples in September 2014, which is consistent with the NJDEP FSPM.

TCE and vinyl chloride were the only VOCs detected above their NJDEP GWQS during the previous three 2014 quarterly sampling events. TCE was detected above its GWQS of 1 µg/L in the monitoring wells: CW1MW28 (1.5J - 8 µg/L), CW1MW29 (2.5 - 13 µg/L), CW1MW31 (0.47J - 6.8 µg/L), and CW1MW281 (8.6 - 160 µg/L). Vinyl chloride was detected above its GWQS of 1 µg/L in only one monitoring well, CW1MW281 (0.52J - 1.8J µg/L). Groundwater analytical detections from samples collected during the previous 2014 quarterly sampling events are presented in **Table 4**.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

TCE and vinyl chloride were the only VOCs detected at concentrations above their NJDEP GWSQ during the 2014 annual sampling event. TCE was detected in four samples [CW1MW28 (4.6J µg/L), CW1MW29 (4.7J µg/L), CW1MW31 (4.4J µg/L) and CW1MW281 (330 µg/L)] above its NJDEP GWQS of 1 µg/L. Vinyl chloride was also detected at CW1MW281 above its NJDEP GWQS of 1 µg/L, at an estimated concentration of 1.8J µg/L. Groundwater analytical results from samples collected during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 4**.

5.0 FINDINGS AND RECOMMENDATIONS

TCE continues to be detected in monitoring wells CW1MW28, CW1MW29, CW1MW31 and CW1MW281 in exceedance of the NJDEP GWQS of 1 µg/L. Concentrations of TCE appear to have remained steady at wells CW1MW28, CW1MW29, and CWMW31. However, the last two sampling events at CW1MW281 show a significant fluctuation of TCE concentrations ranging from 8.9 µg/L (January 2014) to 330 µg/L (December 2014). A review of historical data also indicate that there have been similar TCE fluctuation trends in past sampling events (non-detect August 2010 to 109 µg/L January 2010). Vinyl chloride concentrations have been detected in only two wells (CW1MW29 and CW1MW281) during the 2014 quarterly sampling events. Concentrations detected in CW1MW29 (1st and 3rd quarters) have been below the NJDEP GWQS of 1 µg/L while concentrations detected (in 3rd and 4th quarters) in CW1MW281 were slightly above the GWQS.

Based on the available data, monitoring of the groundwater for VOCs is recommended to continue on a quarterly basis via the PDB sampling methodology at FTMM-22. Similarly to other FTMM sites, and as agreed to by NJDEP, PDBs will be used for LTM until a time where a decision is made to terminate groundwater sampling (PDB results are below the GWQS) and at that time, LFPS methods will be used to collect groundwater samples for the confirmatory round(s).

A review of the historical groundwater sampling results is presented in **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 30, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

D = Diluted Sample

CW1MW32 - Third Quarter 2010 metals data is incomplete due to missing data sheet in the analytical data package.

Table 4
Groundwater Analytical Results - 2013 and 2014
Site FTMM-22 Former Waste Water Treatment Lime Pit (CWA-1)
Annual 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-22 Former Waste Water Treatment Lime Pit (CWA-1)
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results[1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)[1]	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-22, CW-1									
CW1MW27	VOC	TCE	N/A	No	No	No	No	Yes (VOCs)	Metals attributed to background conditions and are not related to historical site uses, metals discontinued in 2013. TCE currently detected at levels just below the NJDEP GWQS. Will require a sampling event using LFPS methods to remove well from LTM.
CW1MW28		TCE	N/A	No	No	Yes	No	Yes (VOCs)	Metals attributed to background concentrations not historical site uses, metals discontinued in 2013.
CW1MW29		TCE	N/A	No	No	Yes	No	Yes (VOCs)	Metals attributed to background concentrations not historical site uses, metals discontinued in 2013.
CW1MW31		TCE	N/A	No	No	Yes	No	Yes (VOCs)	Metals attributed to background concentrations not historical site uses, metals discontinued in 2013.
CW1MW37		N/A	N/A	N/A	N/A	N/A	Yes	Yes (VOCs)	Metals attributed to background conditions and are not related to historical site uses. Well retained for sentinel purposes.
CW1MW281		TCE, VC	N/A	No	No	Yes	No	Yes (VOCs)	Metals slightly greater than background however are not related to historical site uses, metals discontinued in 2013.

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. TCE - trichloroethene
4. VC - vinyl chloride
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells CW1MW26, CW1MW30, CW1MW32, CW1MW33, CW1MW34, CW1MW35, CW1MW36, CW1MW38, CW1MW39, CW1MW40, CW1MW282, and CW1MW291 were removed from the long term monitoring sampling program.

ATTACHMENTS

Attachment A NJDEP PDB Checklists

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMP
2. Location: FTM #27, CW-1
3. Well Designation: CW1MW27
4. Well Permit Number: 29-32591

5. Type of Well: ☒ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other
6. Well Surface Finish: ☒ Stick Up ☐ Flush Mount
7. Location of Measuring Point: ☒ Top of Casing ☐ Other (specify) _____
8. **NOTE:** PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.) 1.57
9. Total Well Depth (fbgs): 15.54
10. Screened interval/open hole (fbgs): 5.54-15.54
11. Well Casing: Diameter 4 Material ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
12. Well Screen (or open hole diameter): Diameter 4 Material ☒ PVC ☐ Carbon Steel ☐ Stainless Steel
13. Screen Size (slot): Screen Slot Size 0.01

14. Date and Time of Deployment: Date: 9/30/14 Time: 1250
15. Depth to Ground Water: Depth to ground water at time of deployment 9.13
16. Date and Time of Retrieval: Date: 12/18/14 Time: 1350
17. Depth to Ground Water: Depth to ground water at time of retrieval 8.25 toc
18. Type of Deployment Line Used: Diameter: 3/16" Material: poly

19. Material and Mass (oz.) of PDBS Weight: stainless Steel 20oz (stainless steel recommended)
20. Type of PDBS Used:
    ☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
    ☒ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____
22. Position of PDBS Weight:
    ☒ Attached to bottom of PDBS and suspended in well
    ☐ Attached to bottom of deployment line and suspended in well
    ☐ Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
12.63			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
    ☐ **No**, this well is being profiled during this sampling round
    ☒ **Yes**, this well was profiled already. Date when well was profiled: 8/28/13
25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
    ☐ **No**, flow testing has not been conducted in this well
    ☐ **Yes**, flow testing of this well was conducted. Date of testing: _____
    Type of flow meter used: _____
    Measurements taken every _____ feet **[Please Attach Results]**
26. Weather Conditions During Deployment: Temp. 66F Wind 0-5 mph ☐ Sunny ☒ Overcast ☐ Raining ☐ Snowing
27. Weather Conditions During Retrieval: Temp. 40°F Wind 10-15 mph ☒ Sunny ☐ Overcast ☐ Raining ☐ Snowing

28. Field Sampling Technician: Name(s) and Company (please print clearly)

Name	Company

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-22, CW-1
3. Well Designation: CW1MW28
4. Well Permit Number: 29-35312

5 Type of Well: ☒ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other

6 Well Surface Finish: ☐ Stick Up ☒ Flush Mount

7 Location of Measuring Point: ☒ Top of Casing ☐ Other (specify) _____

8 **NOTE:** PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below any differences between the measuring point identified above and actual ground surface at the well head.

Distance between measuring point and ground surface (ft.) -1.00

9 Total Well Depth (fbgs): 41.24

10 Screened interval/open hole (fbgs): 31.24 - 41.24

11 Well Casing: Diameter 4" Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel

12 Well Screen (or open hole diameter): Diameter 4" Material: ☒ PVC ☐ Carbon Steel ☐ Stainless Steel

13 Screen Size (slot): Screen Slot Size .02

14. Date and Time of Deployment: Date: 9/30/14 Time: 1255

15. Depth to Ground Water: Depth to ground water at time of deployment 9.00

16. Date and Time of Retrieval: Date: 12/18/14 Time: 1322

17. Depth to Ground Water: Depth to ground water at time of retrieval 8.46

18. Type of Deployment Line Used: Diameter: 3/16" Material: poly

19. Material and Mass (oz.) of PDBS Weight: stainless steel 20oz (stainless steel recommended)

20. Type of PDBS Used:
☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
☒ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)

21. Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____

22. Position of PDBS Weight:
☒ Attached to bottom of PDBS and suspended in well
☐ Attached to bottom of deployment line and suspended in well
☐ Attached to bottom of deployment line and resting on bottom of well (preferred)

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within the FTMM-53 site were gauged on September 30, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1.** Groundwater elevations in monitoring wells ranged from 7.06 (699RW11) to 11.93 (699MW06) feet above mean sea level (amsl) and the inferred groundwater flow direction is to the east (**Figure 2**).

During the groundwater gauging, the physical condition of FTMM-53 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater sampling was conducted at eight monitoring wells (699MW01, 699MW04, 699MW06, 699MW09, 699MW16, 699RW03, 699RW05, and 699RW11) located in FTMM-53 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-53 is sampled on a quarterly basis. The groundwater sampling program included measuring the depths to water in monitoring wells at FTMM-53, and sample collection in selected wells using passive diffusion bags (PDBs). PDBs were deployed September 30, 2014 and samples were retrieved on December 18, 2014. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the SAP. Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed NJDEP PDB checklists for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From April 1997 through June 2010, FTMM-53 monitoring wells were sampled for VOCs and metals.

In the last four historical rounds of quarterly groundwater sampling conducted at FTMM-53 from June 2010 to June 2011, samples were submitted for VOCs and metals. Historically, several metals were detected in exceedance of both their NJDEP Ground Water Quality Standard (GWQS) and background concentrations established in the 1995 Weston Report, including beryllium, cadmium, iron, lead, manganese, nickel and sodium. These metals are attributed to background conditions and are not associated with historical site operations.

Historically, several VOCs have been found to be in exceedance of their respective NJDEP GWQS in FTMM-53 monitoring wells. These VOCs include benzene, tetrachloroethene (PCE), trichloroethene (TCE), *tert*-butyl-alcohol (TBA), and tentatively identified compounds (TICs). Historical groundwater analytical results are presented in **Table 3**.

During the August 2013 Baseline Sampling Event, 14 monitoring wells were sampled for VOCs at FTMM-53. Benzene was detected above its NJDEP GWQS of 1 µg/L in monitoring wells 699MW06, 699RW03, 699RW05 and 699RW11. PCE (699MW16), 1,2,4-trimethylbenzene (699RW03, 699WR05), 1,3,5–trimethylbenzene (699RW05) and total xylenes (699RW05) were detected in exceedance of their respective NJDEP GWQS. Groundwater analytical detections from samples collected during the August 2013 Sampling Event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 6 out of the 14 groundwater monitoring wells were removed from the long term monitoring (LTM) program including 616MW01, 699MW02, 699MW05, 699MW08, 699MW12, and 699MW15, and the remaining wells were to be sampled quarterly and analyzed for VOCs.

Groundwater sampling at FTMM-53 has been conducted on a quarterly basis for 2014, in March, May, and September. This data has been presented in reports submitted quarterly to the NJDEP. Low-flow purging and sampling (LFPS) and PDB methods were used in the first quarterly sampling event (March 2014) to confirm that MTBE was not present in the groundwater at the wells. Based on the absence of MTBE using LFPS, the PDB method was employed as the sampling method for FTMM-53.

Six VOCs (benzene, 1,2,4-trimethylbenzene 1,3,5–trimethylbenzene, xylenes, total VOC TICs and tetrachloroethene) were detected above their NJDEP GWQS during the previous three 2014 quarterly sampling events. Benzene was detected above its GWQS of 1 µg/L in monitoring wells 699RW03 (3.7J µg/L - 4.8J µg/L), 699RW05 (2.8 µg/L - 7.2 µg/L), 699RW11 (2.7 µg/L -11 µg/L), and 699MW06 (9 µg/L). 1,2,4-trimethylbenzene was detected above its GWQS of 100 µg/L in monitoring wells 699RW03 (110 µg/L -130 µg/L) and 699WR05 (130 µg/L- 790 µg/L). 1,3,5–trimethylbenzene was detected above its GWQS of 100 µg/L in one monitoring well, 699RW05 (23 µg/L -160 µg/L). Xylene (total) was detected above its GWQS of 1000 µg/L in monitoring well 699WR05 (720 µg/L- 2,410 µg/L). Total VOC TICs were detected above its GWQS of 500 µg/L at monitoring wells 699RW03 (813 µg/L) and 699RW05 (2,338 µg/L). Tetrachloroethene was detected above its NJDEP GWQS of 1 µg/L in one monitoring well, 699MW16 (1.3 µg/L). The groundwater analytical data for the samples collected during the three 2014 quarterly events are presented in **Table 4**.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Several VOCs were detected in groundwater samples collected during this annual (fourth quarter) event in conducted in December 2014. However, benzene, 1,2,4-trimethylbenzene and estimated total TICs were the only VOCs detected in the groundwater at FTMM-53 above their respective NJDEP GWQS in two wells. Benzene (1.9J µg/L), 1,2,4-trimethylbenzene (200J µg/L) and total TICs (1,181JN µg/L) were detected above their GWQS of 1 µg/L, 100 µg/L and 500 µg/L, respectively, at monitoring well 699RW05. Benzene was detected at well 699RW11 at an estimated concentration of 3J µg/L. Groundwater analytical detections from samples collected during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 4**.

5.0 FINDINGS AND RECOMMENDATIONS

VOCs (benzene, 1,2,4-trimethylbenzene 1,3,5–trimethylbenzene, xylenes, total VOC TICs and tetrachloroethene) were detected above their NJDEP GWQS at least once during the 2014 quarterly sampling events. Benzene continues to be detected at monitoring wells 699RW05 and 699RW11 in exceedance of the NJDEP GWQS of 1 µg/L. 1,2,4-trimethylbenzene concentrations have been detected at monitoring wells 699RW03 and 699RW05 during the quarterly sampling with exceedances occurring in March 2014 (699RW03 and 699RW05) and in December 2014 (699RW05). 1,3,5–trimethylbenzene concentrations have been detected at monitoring well 699RW05 during the quarterly sampling with an exceedance occurring in March 2014. Concentrations of PCE continue to fluctuate around the NJDEP GWQS of 1 µg/L at 699MW16, with one NJDEP GWQS exceedance during the September 2014 sampling event. Fluctuation of total VOC TICs concentrations at wells 699RW03 and 699RW05 have been observed during the last four quarters from 813 µg/L to 2,338 µg/L (699RW03) in March 2014 and non-detect to 7.1 µg/L (699RW05) in July 2014. A review of historical data for VOC TICs shows similar fluctuation trends in past sampling events. Fluctuations of xylenes concentrations detected at well 699RW05 have occurred during the last four quarters, from 1.88J µg/L in September 2014 to 2,228 µg/L in March 2014. A review of historical data also indicates similar xylenes fluctuation trends in past sampling events.

Based on the available data, it is recommended that groundwater monitoring for VOCs continue on a quarterly basis using PDB sampling methodology at FTMM-53. Additionally**,** it is recommended that monitoring wells 699MW01, 699MW04 and 699MW09 be sampled using LFPS methods to determine if these monitoring wells meet the criteria to be removed from LTM program during the next sampling event. A review of historical groundwater sampling results is presented **Table 5**, which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

Third Quarter 2011 data is not included due to an incomplete analytical data package.

Table 4
Groundwater Analytical Results - 2013 and 2014
FTMM-53 Former Gas Station at Building 699
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 5
Review of Historical Groundwater Sampling Results
Site FTMM-53 Former Gas Station at Building 699
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation					Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify Compound)[1]	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)[3]	Well needed for sentinel purposes? (Y/N)	Retain Analyte/Well (Yes or No)	
FTMM-53, B699									
699MW01	VOC	No	N/A	No	No	No	No	Yes	Benzene currently detected at levels just below the NJDEP GWQS. Continue sampling using PDBs until next annual event, then switch to LFPS to confirm that benzene levels are below NJDEP GWQS.
699MW04		No	N/A	No	No	No	No	Yes	Benzene currently detected at levels just below the NJDEP GWQS. Continue sampling using PDBs until next annual event, then switch to LFPS to confirm that benzene levels are below NJDEP GWQS.
699MW06		Benzene	N/A	No	No	Yes	No	Yes	
699MW09		No	N/A	No	No	No	No	Yes	PCE currently detected at levels just below the NJDEP GWQS. Continue sampling using PDBs until next annual event, then switch to LFPS to confirm that benzene levels are below NJDEP GWQS.
699MW16		PCE	N/A	No	No	No	No	Yes	
699RW03		1,2,4-trimethylbezene, benzene, TICs	N/A	No	No	Yes	No	Yes	
699RW05		1,2,4-trimethylbezene, 1,3,5-trimethylbenzene, benzene, xylenes, TICs	N/A	No	No	Yes	No	Yes	
699RW11		Benzene	N/A	No	No	Yes	No	Yes	

Notes:

1. Has any of the compounds exceeded the NJDEP GWQS in the annual 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall) for the 4 previous data rounds?
3. PCE - tetrachloroethene
4. TICs - Tentatively identified compounds
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 616MW01, 699MW02, 699MW05, 699MW08, 699MW12, and 699MW15 were removed from the long term monitoring sampling program.

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-53
3. Well Designation: ~~G-[illegible]~~ (new) G97MW01
4. Well Permit Number: ~~29-23600-RCW~~ 29236771

5. Type of Well: ☑ Monitoring ☐ Extraction ☐ Residential ☐ Public Supply ☐ Irrigation ☐ Other
6. Well Surface Finish: ☐ Stick Up ☑ Flush Mount
7. Location of Measuring Point: ☑ Top of Casing ☐ Other (specify) _____
8. NOTE: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.): -.75
9. Total Well Depth (fbgs): 15.12
10. Screened interval/open hole (fbgs): 1.12-14.12
11. Well Casing: Diameter 4 Material ☑ PVC ☐ Carbon Steel ☐ Stainless Steel
12. Well Screen (or open hole diameter): Diameter 4 Material ☑ PVC ☐ Carbon Steel ☐ Stainless Steel
13. Screen Size (slot): Screen Slot Size 0.02

14. Date and Time of Deployment: Date: 9/30/14 Time: 1035
15. Depth to Ground Water: Depth to ground water at time of deployment 5.27
16. Date and Time of Retrieval: Date: 12/18/14 Time: 0953
17. Depth to Ground Water: Depth to ground water at time of retrieval 2.61 TOC
18. Type of Deployment Line Used: Diameter: 3/16" Material: poly

19. Material and Mass (oz.) of PDBS Weight: Stainless Steel 20 oz (stainless steel recommended)
20. Type of PDBS Used:
    ☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
    ☑ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.) 18 Diameter (in.) 1.5 Filled _____
22. Position of PDBS Weight:
    ☑ Attached to bottom of PDBS and suspended in well
    ☐ Attached to bottom of deployment line and suspended in well
    ☐ Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS):

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
7.5			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
    ☐ No, this well is being profiled during this sampling round
    ☑ Yes, this well was profiled already. Date when well was profiled: 3/31/14
25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
    ☐ No, flow testing has not been conducted in this well
    ☐ Yes, flow testing of this well was conducted. Date of testing: _____
    Type of flow meter used: _____
    Measurements taken every _____ feet [Please Attach Results]
26. Weather Conditions During Deployment: Temp. 65°F Wind 0-5 mph ☐ Sunny ☑ Overcast ☐ Raining ☐ Snowing
27. Weather Conditions During Retrieval: Temp. 40°F Wind 10-15 mph ☐ Sunny ☑ Overcast ☐ Raining ☐ Snowing

28. Field Sampling Technician Name(s) and Company (please print clearly)

Name	Company
Nick Loiaza	Tom MacDougall / PARSONS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
☐No, this well is being profiled during this sampling round
☑Yes, this well was profiled already. Date when well was profiled: 3/31/14

25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
☐No, flow testing has not been conducted in this well
☐Yes, flow testing of this well was conducted. Date of testing: _____
Type of flow meter used: _____
Measurements taken every _____ feet **[Please Attach Results]**

26. Weather Conditions During Deployment: Temp. 65°F Wind 0-5mph ☐Sunny ☑Overcast ☐Raining ☐Snowing

27. Weather Conditions During Retrieval: Temp. 41°F Wind 5-10 mph ☑Sunny ☐Overcast ☐Raining ☐Snowing

2. Location: FTMM-53
3. Well Designation: 699RW11
4. Well Permit Number: 29-26031

5 Type of Well ☐Monitoring ☒Extraction ☐Residential ☐Public Supply ☐Irrigation ☐Other

6 Well Surface Finish ☐Stick Up ☒Flush Mount

7 Location of Measuring Point ☒Top of Casing ☐Other (specify) _____

8 **NOTE:** PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below any differences between the measuring point identified above and actual ground surface at the well head.

Distance between measuring point and ground surface (ft.) -0.58

9 Total Well Depth (fbgs) 17.62

10 Screened interval/open hole (fbgs) 2.68 - 17.62

11 Well Casing Diameter 11 Material ☒PVC ☐Carbon Steel ☐Stainless Steel

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-57 were gauged on October 2, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 3.76 (108MW03) to 6.54 (108MW01) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the southeast towards Oceanport Creek, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-57 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

A groundwater sample was collected from one monitoring well (108MW04) located at FTMM-57 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-57 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). The groundwater sample was collected from well 108MW04 on October 2, 2014 and analyzed for lead via USEPA Method SW6010C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP).

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

The last four quarterly groundwater sampling events conducted at FTMM-57 consisted solely of metals analysis. During these last four historical events, several metals including aluminum, arsenic, beryllium, chromium, iron, lead, manganese, mercury and sodium were detected in exceedance of the NJDEP Ground Water Quality Standard (GWQS). However, sodium, manganese, mercury and lead were the only metals to exceed their individual background concentration established in the 1995 Weston Report. Sodium and manganese are attributed to background conditions that typically contribute to elevated metal concentrations in groundwater, such as the glauconitic soils that underlie the site. Lead was found in exceedance of its background concentration (Weston, 1995) in site monitoring well 108MW04 during the February and August 2011 groundwater monitoring events. Lead is potentially associated with historical site operations.

Mercury exceeded its NJDEP GWQS and background concentration (Weston, 1995) in November 2010. Prior to and since this exceedance, mercury has not been detected in excess of its NJDEP GWQS. The November 2010 mercury exceedance is anomalous. Historical groundwater analytical results are presented in **Table 2**.

Aluminum, arsenic, iron, manganese and sodium were detected above their respective NJDEP GWQS. Of these metals, only manganese and sodium were the detected at concentrations greater than their background concentrations (Weston, 1995). However, manganese and sodium are found naturally in the glauconitic soil underlying the Site and are considered background conditions and not associated with historical site uses. No volatile organic compounds (VOCs) or pesticides were detected above their NJDEP GWQS.

During the August 2013 Baseline Sampling Event, four monitoring wells were sampled for VOCs plus tentatively identified VOCs, pesticides and metals. No VOCs, or pesticides were detected above the NJDEP GWQS. Metals detected at the four wells above the NJDEP GWQS were attributed to site background conditions. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, three out of the four groundwater monitoring wells were removed from the long term monitoring (LTM) program including: 108MW01, 108MW02 and 108MW03; and VOCs, pesticides and metals analysis were discontinued with the exception of lead.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Lead was not detected at monitoring well 108MW04 during the annual (fourth quarter) 2014 sampling event.

5.0 FINDINGS AND RECOMMENDATIONS

Historically, well 108MW04 contained lead concentrations (ranging from non-detect to 101 µg/L) above the NJDEP GWQS of 5 µg/L and its background concentration (Weston, 1995), however lead was not detected above the method detection limit during the August 2013 and 2014 sampling events. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses. Based on the collective groundwater sampling results, it is recommended that one additional groundwater sample be collected at well 108MW04 and analyzed for lead. If this sample confirms a second non-detect for lead, groundwater sampling at FTMM-57 will be recommended to be discontinued.

Groundwater Analytical Results - 2013 and 2014
Site FTMM-57 Building 108 UST Gasoline Release
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####
NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###
n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

FTMM-57, B108									
108MW04	Pb	Pb	No	No	No	N/A	No	Yes	Pb not detected in 2014 or 2013 sampling events. One more sampling round for Pb is recommended for this well

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. N/A - Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 108MW01, 108MW02 and 108MW03; were removed from the long term monitoring sampling program and VOCs, pesticides and metals analysis were discontinued in 2014 with the exception of lead.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-58 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 26.10 (2567MW06) to 30.85 (2567MW02) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the southeast, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-58 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells (2567MW01 and 2567MW03) located at FTMM-58 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-58 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 2567MW01 and 2567MW03 on October 2, 2014. The groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

Groundwater monitoring has been conducted at FTMM-58 beginning in April 1997. Groundwater monitoring has consisted of sampling for select VOCs, semi-volatile organic compounds (SVOCs), and metals. The four most recent historical quarterly groundwater sampling events consisted of sampling for VOCs and metals.

Tert-butyl alcohol (TBA) was detected in FTMM-58 monitoring well 2567MW01 above the NJDEP Groundwater Quality Standards (GWQS) in March and June 2010, but was not detected in the subsequent groundwater sampling event conducted in September 2010. TBA was also detected in 2567MW03 at a concentration of 486.99 µg/L in September 2010. The NJDEP GWQS for TBA is 100 µg/L.

The November 2011 Remedial Action Progress Report for FTMM-58 prepared by CALIBRE Systems, Inc. stated that in an effort to reduce the TBA exceedances exhibited in monitoring wells 2567MW01 and 2567MW03, *in-situ* chemical oxidation injections would be performed

in this area. Three injections of RegenOx®/ORC Advanced™ were conducted between November 2010 and June 2011 under an approved NJDEP Permit by Rule letter dated October 28, 2010.

Antimony was detected in monitoring wells 2567MW01, 2567MW02, 2567MW03, 2567MW04 and 2567MW05 above the NJDEP GWQS in at least one of the last four historical sampling rounds. Lead was also detected above the NJDEP GWQS in the September and June 2010 sampling events. Both antimony and lead were well below the background conditions for each compound and are not related to former site operations. Historical groundwater analytical data are presented in **Table 2**.

During the August 2013 Baseline Sampling Event, seven monitoring wells were sampled for VOCs. No VOCs were detected above their respective NJDEP GWQS during August 2013 sampling event. Results of the August 2013 sampling event are presented in **Table 3**

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, five out of the seven groundwater monitoring wells were removed from the long term monitoring program (LTM) including 2567MW02, 2567MW04, 2567MW05, 2567MW06 and 2567MW07; and the volatile organic compound list were reduced to TBA only.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

TBA was detected in only monitoring well 2567MW01, at a concentration of 260 µg/L which is above the NJDEP GWQS of 100 µg/L. Groundwater analytical results from samples collected during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Overall, concentrations of TBA detected at monitoring well 2567MW01 have been decreasing from a high of 829.45 µg/L (June 2010) to 260 µg/L (December 2014); concentrations remain above the NJDEP GWQS (100 µg/L). Concentrations of TBA detected at monitoring well 2567MW03 have fluctuated and have ranged from 486.99 µg/L in September 2010 to non-detect in December 2014. Based on the collective groundwater analytical results, groundwater monitoring for TBA is recommended to continue for monitoring wells 2567MW01 and 2567MW03. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.

** Value is the USEPA Action Level.

NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

< = Analyte does not exceed the detection limit shown

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

NA = Not analyzed

ND = Not detected

NLE = No limit established

ER = Estimated Result

LF = Low flow sampling method used to collect sample

DUP = field duplicate sample

J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)

Groundwater Analytical Results - 2013 and 2014
Site FTMM-58 Building 2567 UST Gasoline
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####
NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###
n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

2567MW03		NO	N/A	N/A	N/A	N/A	NO	Yes (VOCs)	Well will be analyzed for VOCs for two additional rounds to confirm presence or lack of contaminant.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. TBA - Tert-butyl-alcohol
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 2567MW02, 2567MW04, 2567MW05, 2567MW06 and 2567MW07 were removed from the long term monitoring sampling program and the volatile organic compound list has been reduced to TBA only.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-59 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 5.94 (1122MW02) to 10.03 (1122MW06) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the northwest, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-59 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

One groundwater sample was collected from monitoring well 1122MW07 located at FTMM-59 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-59 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of the groundwater sample using low-flow purging and sampling (LFPS). The groundwater sample was collected on October 2, 2014. The groundwater sample was analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The sample was collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed LFPS field sheets for each well sampled can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From October 2007 through April 2010, FTMM-59 monitoring wells were sampled for VOCs.

The last five rounds of historical quarterly sampling conducted at FTMM-59, from July 2010 to August 2011, consisted of VOC and metals analysis. Arsenic, beryllium, cadmium, iron, lead, and selenium were detected above their respective NJDEP GWQS. However, only beryllium, cadmium, and selenium were detected in site monitoring wells at concentrations greater than their respective background concentrations as established in the 1995 Weston Report. Cadmium, selenium, and beryllium are not associated with historical site operations and are attributed to background conditions. No VOCs were detected in exceedance of their applicable standards. Historical groundwater analytical results are presented in **Table 2.**

During the August 2013 Baseline Sampling Event, seven monitoring wells were sampled for VOCs. No VOCs were detected in exceedance of their respective NJDEP GWQS during the August 2013 sampling event. Results of the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in

their February 5, 2015 letter. Based on this approval, six out of the seven groundwater monitoring wells were removed from the long term monitoring (LTM) program including 1122MW01, 1122MW02, 1122MW03, 1122MW04, 1122MW05, and 1122MW06.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Seven VOCs were detected in the groundwater sample collected from well 1122MW07, and concentrations detected were significantly below their respective NJDEP GWQS during the annual 2014 (fourth quarter) sampling event. Groundwater analytical data from the sample collected during the annual (fourth quarter) 2014 groundwater sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Historical and recent (2013 and 2014) groundwater sampling at FTMM-59 indicates that VOCs concentration detected in the groundwater continue to be below their respective NJDEP GWQS. The NJDEP, in their July 3, 2014 comment letter (see **Appendix Q**) approved one additional round of sampling to confirm the 2013 VOCs results at monitoring well 1122MW07 before discontinuing the LTM program at FTMM-59. These 2014 results demonstrate that VOCs continue to be significantly below their respective NJDEP GWQS in well 1122MW07 and confirms the 2013 results. However, monitoring of the groundwater will be evaluated as a whole under the RI/FS. A review of the historical groundwater results are presented in **Table 4**, which provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS
*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
**NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 27, 2007)
USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
(1) Low-flow sampling method used to collect sample
J - Estimated concentration exceeds the MDL and is less than the RL
NA - Not analyzed
ND - Not detected
NR - Not reported
Sampling for SVOCs, Pesticides/PCBs, and Metals were discontinued after the 10/7/04 sampling event as per NJDEP approval letter dated 11/2004.

Table 3
Groundwater Analytical Results - 2013 and 2014
Site FTMM-59 Building 1122 Unknown Discharge
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.

[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-59 Building 1122 Unknown Discharge
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-59, B1122									
1122MW07	VOC	No	N/A	No	N/A	N/A	No	No	VOCs not detected above GWQS in 2014, confirming the 2013 result. However, monitoring will be evaluated as a whole under the RI/FS process.

Notes:

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. N/A - Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 1122MW01, 1122MW02, 1122MW03, 1122MW04, 1122MW05, and 1122MW06 were removed from the long term monitoring sampling program.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-61 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 3.04 (283MW01) to 8.75 (283MW04) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the northwest, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-61 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

A groundwater sample was collected from monitoring well 283MW02 located at FTMM-61 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-61 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). The groundwater sample was collected on October 2, 2014. The groundwater sample was analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

The sample was collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From March 2008 to November 2010, groundwater samples were collected from FTMM-61 monitoring wells and analyzed for VOCs and metals.

The last four historical rounds of quarterly groundwater sampling conducted at FTMM-61, from November 2010 to August 2011, also consisted of VOC and metals analysis. Historically, benzene, VOC tentatively identified compounds (TICS), aluminum, antimony, arsenic, beryllium, iron, manganese, lead and sodium were detected above their respective NJDEP Ground Water Quality Standard (GWQS). Cadmium, sodium, and beryllium were detected at concentrations greater than their background concentrations established in the 1995 Weston Report. Elevated sodium concentrations are attributable to the proximity of the site to the ocean and brackish water bodies. Beryllium and cadmium were both one-time detections attributed to background conditions (Weston, 1995) and not associated with historical site operations. Historical groundwater analytical results are presented in **Table 2.**

Groundwater samples collected from four monitoring wells during the August 2013 Baseline Groundwater Sampling Event and were analyzed for VOCs and lead. No analytes were detected above their respective NJDEP GWQS. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, three out of the four groundwater monitoring wells were removed from the long term monitoring (LTM) program including 283MW01, 283MW03 and 283MW04; and lead analysis was discontinued.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

No VOCs were detected above their method detection limit in the sample collected at monitoring well 283MW02. Groundwater analytical detections from the sample collected during the annual (fourth quarter) 2014 sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Historically, monitoring well 283MW02 has exhibited concentrations above the NJDEP GWQS for benzene and VOC TICs. Concentrations of these compounds have been decreasing over time and currently benzene and VOC TICs concentrations were non-detect during the 2013 and 2014 sampling events. The NJDEP, in their July 3, 2014 comment letter (see **Appendix Q**), approved one additional round of sampling to confirm the 2013 VOCs results at monitoring well 283MW02 before discontinuing the LTM program at FTMM-61. The 2014 results confirm the 2013 results; concentrations of VOCs were non-detect in the groundwater sample at well 283MW02. Therefore, based on the collective groundwater sampling results, it is recommended that the groundwater LTM program be discontinued at FTMM-61. A review of the historical groundwater results are presented in **Table 4**, which provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result

Notes:
Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for VOCs and SVOCs. No individual compound can exceed 100 µg/L.
NJDEP GWQS = Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

USEPA MCL = U.S. Environmental Protection Agency Maximum Contaminant Level (2012)
LF = Low-flow sampling method used to collect sample
< = Analyte does not exceed the detection limit shown
J = Estimated concentration exceeds the method detection limit (MDL) and is less than the reporting limit (RL)
NA = Not analyzed
ND = Not detected
NLE = No limit established
ER = Estimated Result

Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###

n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
  NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

FTMM-61, B283									
283MW02	VOC	Benzene	No	N/A	No	N/A	N/A	No	Benzene non-detect 2013 and 2014. The confirmation of the 2013 results in 2014 (using LFPS methods) is consistent with the NJDEP's July 3, 2014 comment letter, which specifies acceptance of one additional round of sampling in well 283MW02. Recommend discontinuing well. Sb is attributed to background conditions and not associated with historical site operations.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. N/A - Not applicable
4. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 283MW01, 283MW01 and 283MW04 were removed from the long term monitoring sampling program and lead were discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-64 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 14.16 (812MW13) to 12.88 (812MW12) feet above mean sea level (amsl). The inferred shallow and deep groundwater flow direction is generally to the north. **Figure 2** shows the shallow groundwater flow direction, deep wells were not included in the creation of the shallow groundwater contours.

During the groundwater gauging, the physical condition of FTMM-64 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

One groundwater sample was collected from monitoring well 812MW04 located at FTMM-64 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-64 is sampled on an annual basis. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). The groundwater sample was collected on October 2, 2014. The groundwater sample was analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) via the United States Environmental Protection Agency (USEPA) Method SW8260C.

This sample was collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From February 2008 through July 2011, FTMM-64 monitoring wells were sampled for volatile organic compounds (VOCs) and metals.

In the last four historical groundwater sampling events conducted at FTMM-64 from November 2010 to July 2011, samples were submitted for VOCs and metals. Monitoring wells within FTMM-64 were sampled on a staggered quarterly basis during this period. Within the last four events of groundwater sampling at FTMM-64, aluminum, antimony, arsenic, beryllium, cadmium, iron, lead, manganese and sodium were detected above their respective NJDEP Ground Water Quality Standard (GWQS). However, only sodium, manganese, and cadmium were detected above the background concentrations (Weston, 1995). Monitoring wells 812MW04, 812MW05, 812MW06 812MW07, 812MW08, and 812MW14 contained detections of sodium above the background concentration of 21,500 µg/l (Weston, 1995). Monitoring wells 812MW05 (419 - 32 µg/L), 812MW07 (374 - 771 µg/L), and 812MW08 (348 µg/L) contained detections of manganese above the background concentration of 331 µg/l

(Weston, 1995). Cadmium was detected in 812MW08 (10.6 - 54 µg/L) above the background concentration of 9.5 µg/L (Weston, 1995).

In the last four historical quarterly groundwater sampling events, vinyl chloride (1.05 - 4.9 µg/L) has historically been detected in 812MW04 above the NJDEP GWQS of 1 µg/L. Historical groundwater analytical results are presented in **Table 2**.

During the August 2013 Baseline Sampling Event, eight monitoring wells were sampled for VOCs and lead. Lead was detected in monitoring well 812MW04 at a concentration of 7.5 µg/L, above the NJDEP GWQS of 5 µg/L. However, this result is below the background concentration of 22.7 µg/L for lead (Weston, 1995). Concentrations of VOCs were non-detect during the August 2013 baseline groundwater sampling event. Groundwater analytical detections from samples collected during the August 2013 sampling event are presented in **Table 3.**

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, seven out of the eight groundwater monitoring wells were removed from the long term monitoring (LTM) program including: 812MW01, 812MW02, 812MW05, 812MW06, 812MW07, 812MW08 and 812MW14; and lead analysis was discontinued.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Vinyl chloride was the only VOC detected in monitoring well 812MW04 at a concentration of 7.8 µg/L, above the NJDEP GWQS of 1 µg/L. Groundwater analytical results for this well are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Vinyl chloride continues to be detected in well 812MW04 at concentrations above the NJDEP GWQS of 1 µg/L. Concentrations during the last six sampling events (e.g., last four quarterly and two annual events) ranged from 1.05 µg/L (April 2011) to 7.8 µg/L (October 2014). Based on the collective groundwater analytical results, groundwater monitoring for VOCs annually will continue for well 812MW04. A review of historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Table 3
Groundwater Analytical Results - 2013 and 2014
Site FTMM-64 Building 812 UST Gasoline
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###
n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-64 Building 812 UST Gasoline
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-64,B812									
812MW04	VOC	VC	N/A	No	No	Yes	No	Yes	VC was found above GWQS. VOCs will continue to be monitored.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. VC - vinyl chloride
4. N/A - Not applicable
5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 812MW01, 812MW02, 812MW05, 812MW06, 812MW07, 812MW08 and 812MW14, were removed from the long term monitoring sampling program and lead was discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-66 were gauged on September 29, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. Groundwater elevations in monitoring wells ranged from 6.67 (886MW01) to 10.16 (886MW04) feet above mean sea level (amsl). The inferred shallow groundwater flow direction is generally to the northwest, as shown in **Figure 2**.

During the groundwater gauging, the physical condition of FTMM-66 monitoring wells were assessed. The site monitoring wells were found to be in good condition.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from three monitoring wells located at FTMM-66 as part of the annual (fourth quarter) 2014 groundwater sampling event. The groundwater sampling program included measuring the depth to groundwater in monitoring wells prior to sampling and collection of groundwater samples using low-flow purging and sampling (LFPS). Groundwater samples were collected from wells 886RW01, 886RW06 and 886RW08 on October 3, 2014. Groundwater samples were analyzed for Target Compound List (TCL) semi-volatile organic compounds (SVOCs) via USEPA method SW8270D.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

The completed LFPS field sheets can be found in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

From February 2003 through October 2004, FTMM-66 monitoring wells were sampled for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH) and metals. From January 2005 to December 2009, FTMM-66 wells were sampled for VOCs and SVOCs. From February 2010 to May 2010, monitoring wells were sampled for VOCs, SVOCs and metals.

In the last four rounds of quarterly groundwater sampling conducted at FTMM-66 from August 2010 to April 2011, samples were also analyzed for VOCs, SVOCs and metals. Within the last four rounds of groundwater sampling at FTMM-66, bis(2-ethylhexyl) phthalate, antimony, arsenic, beryllium and lead were detected above their respective NJDEP Ground Water Quality Standard (GWQS) in monitoring well 886MW01. The bis(2-ethylhexyl) phthalate detections appear to be anomalous as there is no historical trend of bis(2-ethylhexyl) phthalate detections above the GWQS. The detection of phthalates is attributed to the laboratory; it is considered a common laboratory contaminant since it is present in all laboratory equipment and reagents. The concentrations of antimony, arsenic, beryllium and lead were all below site background conditions (Weston, 1995).

No VOCs or SVOCs were detected in exceedance of any NJDEP GWQS within the last four rounds of historical groundwater sampling. Historical groundwater analytical results are presented in **Table 2**.

During the August 2013 Baseline Sampling Event, thirteen monitoring wells were sampled for VOCs, SVOCs and lead. One compound, SVOCs total tentatively identified compounds (TICs) was detected above its NJDEP GWQS of 500 µg/L at monitoring wells 886RW01 (879 JN µg/L) and 886RW08 (707 JN µg/L). Groundwater analytical results from samples collected during the August 2013 sampling event are presented in **Table 3**.

The Final August 2013 Baseline Groundwater Sampling Report was accepted by the NJDEP in their February 5, 2015 letter. Based on this approval, 10 out of the 13 groundwater monitoring wells were removed from the long term monitoring (LTM) program including 886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW02, 886RW03, 886RW04, 886RW05 and 886RW07; and VOC and lead analysis were discontinued.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

SVOC total TICs was the only compound detected in monitoring wells 886RW01 and 886RW08 during the 2014 annual sampling event. Concentrations (15.4J µg/L and 46.4J µg/L respectively) were below the NJDEP GWQS of 500 µg/L. SVOCs were none-detect in the sample collected from 886RW06. Groundwater analytical results from 2014 sampling event are presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Concentrations of SVOCs (including total TICs) detected during the last four historical sampling events and the 2014 annual sampling event were non-detect or below any of the NJDEP GWQS in wells 886RW01, 886RW06 and 886RW08. However, only the SVOCs total TICs detected during the 2013 sampling event for two (886RW01 and 886RW08) of the three wells exceeded the NJDEP GWQS of 500 µg/L. Based on the available data, one additional round of sampling for SVOCs at 886RW01, 886RW06 and 886RW08 is recommended to confirm that SVOCs concentrations are below the NJDEP GWQS. A review of the historical groundwater sampling results is presented in **Table 4,** which provides the matrix used to determine the status of the wells relative to future groundwater sampling and analyses.

Notes:
1) The synoptic round of water levels in the wells was collected on September 29, 2014.
2) Information on well permit number, X and Y coordinates, depth, screen length, screen interval and TOC elevation were provided by FTMM in a table in June 2013.
3) ft = feet
4) DTW = depth to water (measured from the top of well casing)
5) DTB = depth to bottom of well (measured from the top of well casing)
6) bgs = below ground surface
7) ppm = parts per million (of VOCs)
8) TOC = Top of Casing
9) Elevation = feet above mean sea level
10) N/A = information not available
11) LFPS = Low-Flow Purging and Sampling

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Notes:

Shaded cells = concentrations exceed the NJDEP GWQS

*TICs - Tentatively identified compounds, cannot exceed 500 µg/L for total VOCs and SVOCs. No individual compound can exceed 100 µg/L.

NJDEP Ground Water Quality Criteria as per N.J.A.C. 7:9-6 (July 22, 2010)

U.S. Environmental Protection Agency Maximum Contaminant Level (2012)

LF = Low-flow sampling method used to collect sample

ER - Estimated result

J - Estimated concentration exceeds the MDL and is less than the RL

NA - Not analyzed NR - Not reported

ND - Not detected

NLE - No limit established

a/ Elevated sample detection limit due to difficult sample matrix.

Groundwater Analytical Results - 2013 and 2014
Site FTMM-66 Building 886 Former AST
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###
- Cell Style values represent a result that is above the Weston 1995 Background (Main Post). ###
n/a = all concentrations were less than the detection limit, therefore, no location of maximum value identified.
Dash (-) = only background concentrations for metals are being used as comparison criteria.

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
http://www.epa.gov/region9/superfund/prg/
- The Weston 1995 Background (Main Post) refers to the FTMM reports.
NA

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-66 Building 886 Former AST
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation				Retain Analyte/Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If yes, identify compound)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-66, B886									
886RW01	SVOC	SVOC Total TICs	No	No	No	No	No	Yes	Metals and VOCs discontinued in 2013. Continue sampling one additional round to confirm annual 2014 groundwater sampling results are below NJDEP GWQS.
886RW06		As, Pb	No	N/A	N/A	N/A	Yes	Yes	Metals and VOCs discontinued in 2013. Continue sampling one additional round to confirm annual 2014 groundwater sampling results are below NJDEP GWQS.
886RW08		SVOC Total TICs	No	No	No	No	No	Yes	Metals and VOCs discontinued in 2013. Continue sampling one additional round to confirm annual 2014 groundwater sampling results are below NJDEP GWQS.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or 2 previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superseded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. TIC - Tentatively Identified Compound
4. N/A - Not applicable

5. Per the 2/5/15 NJDEP approval letter of the Final 2013 Baseline Groundwater Report, groundwater monitoring wells 886MW01, 886MW02, 886MW03, 886MW04, 886MW05, 886RW02, 886RW03, 886RW04, 886RW05 and 886RW07 were removed from the long term monitoring sampling program and VOC and lead analysis were discontinued in 2014.

1.0 WATER LEVEL MEASUREMENTS AND WELL ASSESSMENT

Monitoring wells located within FTMM-68 were gauged on September 30, 2014. Monitoring well locations as well as other site features are provided in **Figure 1**. Details regarding the water level measurements are provided in **Table 1**. The depth to groundwater measured from the top of well casing in monitoring wells 565MW01 and 565MW01D was 9.06 and 9.20 feet, respectively. Well details, including the top of well casing elevations, were not available at the time of this report, therefore groundwater elevations could not be calculated. Groundwater is expected to flow towards the east toward Huskey Brook based on local topography and groundwater elevations calculated in nearby monitoring wells at FTMM-53.

Additionally, monitoring wells were inspected for their physical condition during the groundwater gauging. FTMM-68 monitoring wells were found to be in good condition upon inspection.

2.0 GROUNDWATER SAMPLING

Groundwater samples were collected from two monitoring wells (565MW01 and 565MW01D) located within FTMM-68 as part of the annual (fourth quarter) 2014 groundwater sampling event. FTMM-68 is sampled on a quarterly basis. The groundwater sampling program included measuring the depth to groundwater in the two FTMM-68 monitoring wells prior to sampling and collection of groundwater samples using passive diffusion bags (PDBs) methodology. PDBs were deployed in FTMM-68 monitoring wells on September 30, 2014 and samples were retrieved on December 18, 2014. A PDB sampling summary is provided in **Table 2**. Groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds and tentatively identified compounds (VOCs+TICs) via United States Environmental Protection Agency (USEPA) Method SW8260C.

The samples were collected in accordance with the New Jersey Department of Environmental Protection (NJDEP) Field Sampling Procedures Manual (FSPM) and the Sampling Analysis Plan (SAP). Field blanks, duplicates, matrix spike, matrix spike duplicate and quality assurance (QA) split samples were collected for every 5% of samples collected per parameter, per matrix, in accordance with the Quality Assurance Project Plan (QAPP). Trip blanks accompanied each cooler each day in which VOCs were collected for laboratory analysis.

Completed NJDEP PDB checklists for each well sampled are provided in **Attachment A**.

3.0 HISTORICAL GROUNDWATER SAMPLING RESULTS

The groundwater sampling event conducted in August 2013 was the initial sampling event for monitoring wells 565MW01 and 565MW01D since they were installed.

Groundwater analytical results from samples collected from the two wells for VOC analysis during the August 2013 sampling event are presented in **Table 3**. The compounds cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride (VC) were detected in exceedance of their respective NJDEP Ground Water Quality Standards (GWQS) in monitoring well 565MW01 at FTMM-68. Additionally, PCE and TCE were detected above their respective NJDEP GWQS in 565MW01D.

Groundwater sampling at FTMM-68 has been conducted on a quarterly basis for 2014, in March, May, and September. This data has been presented in reports submitted quarterly to the NJDEP. The groundwater analytical data for the samples collected during the three 2014 quarterly events are presented in **Table 3**.

In the three 2014 quarterly groundwater sampling events (March, July, and September), 1,1-dichloroethene (1,1 DCE), cis-1,2-DCE, PCE, TCE, and VC were detected above their respective NJDEP GWQS in monitoring well 565MW01. 1,1 DCE was detected above its GWQS (1µg/L) at concentrations ranging from 2 µg/L to 3.2 µg/L. Cis-1,2-DCE was detected above its GWQS (70 µg/L) at concentrations ranging from 190 µg/L to 270 µg/L. PCE was detected above its GWQS (1µg/L) at concentrations ranging from 350 µg/L to 700 µg/L. TCE was detected above its GWQS (1µg/L) at concentrations ranging from 160 µg/L to 230 µg/L. VC was detected above its GWQS (1µg/L) at concentrations ranging from 13 µg/L to 18 µg/L.

Additionally, cis-1,2-DCE, PCE, TCE and VC were detected in 565MW01D above their respective NJDEP GWQS. Cis-1,2-DCE was detected above its GWQS (70µg/L) at concentrations ranging from 120 µg/L to 140 µg/L. PCE was detected above its GWQS (1µg/L) at concentrations ranging from 1,500 µg/L to 4,800 µg/L. TCE was detected above its GWQS of (1µg/L) at concentrations ranging from 18 µg/L to 110 µg/L. VC was detected above its GWQS (1µg/L) at concentrations ranging from 5.5 µg/L to 6.1 µg/L.

4.0 ANNUAL (FOURTH QUARTER) 2014 GROUNDWATER RESULTS

Four chlorinated VOCs (cis-1,2-DCE, PCE, TCE, and VC) were detected in groundwater samples collected during the annual (fourth quarter) 2014 event at concentrations above their respective NJDEP GWQS of 70 µg/L, 1 µg/L, 1 µg/L and 1 µg/L. Cis-1,2-DCE (110 µg/L), PCE (180 µg/L) TCE (86 µg/L), and VC (1.3J µg/L) were detected at well 565MW01. PCE and TCE were detected at concentrations of 2,400 µg/L and 41J µg/L at monitoring well 565MW01D. Groundwater analytical results for the annual (fourth quarter) 2014 groundwater sampling event is presented in **Table 3**.

5.0 FINDINGS AND RECOMMENDATIONS

Concentrations of five VOCc (1,1-DCE, cis-1,2-DCE, TCE, PCE and VC) were detected above their NJDEP GWQS at least once during the 2014 quarterly sampling events. 1,1-DCE concentrations have been detected at well 565MW01 during the quarterly sampling with exceedences occurring in second and third quarter of 2014. Cis-1,2-DCE and VC concentrations have been detected above their NJDEP GWQS in all four quarters of 2014 at well 565MW01 and only in the first quarter of 2014 at well 565MW01D. TCE and PCE were detected above the NJDEP GWQS in all four quarters of 2014 at both wells. The detection of TCE degradation byproducts (e.g. 1,1 DCE, cis-1,2 DCE and vinyl chloride) indicates that natural attenuation is taking place at both of the wells. Due to the continued presence of VOCs at concentrations above the NJDEP GWQS during 2014 quarterly groundwater sampling events, it is recommended that groundwater monitoring for VOCs using PDB sampling methodology be continued in FTMM-68 monitoring wells on a quarterly basis.

Currently FTMM-68 has not been fully characterized, however, a remedial investigation (RI) is proposed for this site in 2015 and sampling of existing and proposed wells using the low-flow purging and sampling (LFPS) method will be implemented. In the meantime, PDBs will continue to be used to monitor and characterize the groundwater concentrations at FTMM-68. The two existing wells are located in the potential source area and the detected VOCs have a high enough concentrations for the use of PDBs (even though they can provide results that are biased low) to effectively characterize the VOC concentrations. Additionally, once the RI is complete, the long term monitoring plan for FTMM-68 will be evaluated and revised, if necessary.

A review of the historical groundwater sampling results is presented in **Table 4**, which also provides the matrix used to determine the status of wells relative to future groundwater sampling and analyses.

Fort Monmouth, New Jersey

Footnote:
1) All historical data collected prior to 2013 are reported as provided by others.
2) Number of Analyses is the number of detected and non-detected results excluding rejected results. Sample duplicate pairs have not been averaged.
3) NLE = no limit established.
4) ND = not detected in any background sample, no background concentration available.

5) Chemical result qualifiers are assigned by the laboratory and is typically evaluated and modified (if necessary) by during data validation.
[blank] = detect, i.e. detected chemical result value.
B = Compound detected in the sample and its associated blank sample.
R = Rejected, data validation rejected the results.
U = non-detect, i.e. not detected equal to or above this value.
U-DL = Elevated sample detection limit due to difficult sample matrix.
U-ND = Analyte not detected in sample, but no detection or reporting limit provided.
J = estimated (detect or non-detect) value.
E (or ER) = Estimated result.
D = Results from dilution of sample.
J-DL = Elevated sample detection limit due to difficult sample matrix.
JN = Tentatively identified compound, estimated concentration.

6) Chemical results greater than or equal to the action level (depending on criteria) are highlighted based on the Criteria that are present.
- Cell Shade values represent a result that is above the NJ Ground Water Quality Criteria ####

NJDEP Interim Specific GWQC values are presented for the NJ GWQS where there is not a Specific Ground Water Quality Criteria. A full list of compounds is available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).

NJDEP Interim Generic GWQC values are presented for the NJ GWQS where there is not a XXXXX or a NJDEP Interim Specific GWQC. Available at (http://www.nj.gov/dep/wms/bwqsa/gwqs_interim_criteria_table.htm).
- Bold Outline represent a result that is above the USEPA 2014-05 MCL. ###

7) Criteria action level source document and web address.
- The NJ Ground Water Quality Criteria refers to the NJDEP Groundwater Quality Standards - Adopted July 22, 2010
  http://www.state.nj.us/dep/wms/bwqsa/docs/njac79C.pdf
- The 2014-05 USEPA MCL refers to the USEPA's Region 9 Regional Screening Levels (HQ=1.0) - 5/31/2014 (Last revised)
  http://www.epa.gov/region9/superfund/prg/

8) Wells sampled in the fourth quarter are highlighted in yellow. Sample ID

Table 4
Review of Historical Groundwater Sampling Results
Site FTMM-68 Former Dry Cleaners UST at Building 700
Annual (Fourth Quarter) 2014 Groundwater Sampling Report
Fort Monmouth, New Jersey

Site Name/ Well ID	Interpretation of Historical and 2014 Results [1]			2014 Evaluation				Retain Analyte/ Well (Yes or No)	Rationale
	Chem Class / Analyte	Does it Exceed NJDEP GWQS (Yes or No) (If Yes, identify compound)	Do Metals Exceed FTMM Background Concentration (Yes or No) (If Yes, identify Metal)	Seasonal Effect?[2] (Y/N)	Anomaly? (Y/N)	Exceedance part of overall trend? (Y/N)	Well needed for sentinel purposes? (Y/N)		
FTMM-68, B700									
565MW01	VOC	1,1 DCE, cis-1,2-DCE, PCE, TCE, VC	N/A	No	No	Yes	Yes	Yes	VOCs were detected in the 2014 quarterly events. Continue quarterly sampling
565MW01D		Cis-1,2-DCE, PCE, TCE, Cis-1,2-DCE, VC	N/A	No	No	Yes	Yes	Yes	VOCs were detected in the 2014 quarterly events. Continue quarterly sampling.

Notes

1. Has any of the analyte compounds exceeded the NJDEP GWQS in the 2014 data and the 4 previous quarterly data rounds or two previous annual rounds?
   a. If yes then keep analyte in LTM list
   b. If no then remove this analyte from LTM list
   c. a and b above may be occasionally superceded on a case-by-case basis, depending on site conditions.
2. Has any of the analyte compounds exceeded the NJDEP GWQS seasonally (winter spring vs. summer fall)?
3. 1,1 DCE = 1,1-Dichloroethene
4. cis-1,2-DCE = cis-1,2-dichloroethene
5. PCE = tetrachloroethene
6. TCE = trichloroethene
7. VC = vinyl chloride

PARSONS

Checklist for the Submission of Sampling Data for Passive Diffusion Bag Samplers (PDBS)

1. Site: FTMM
2. Location: FTMM-68
3. Well Designation: 56SMW01
4. Well Permit Number: —

5 Type of Well ☑Monitoring ☐Extraction ☐Residential ☐Public Supply ☐Irrigation ☐Other

6 Well Surface Finish ☑Stick Up ☐Flush Mount

7 Location of Measuring Point ☑Top of Casing ☐Other (specify) _____

8 NOTE: PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.

Distance between measuring point and ground surface (ft.) 1.79

9 Total Well Depth (fbgs) 15.29

10 Screened interval/open hole (fbgs) 5.29-15.29

11 Well Casing Diameter 4 Material ☑PVC ☐Carbon Steel ☐Stainless Steel

12 Well Screen (or open hole diameter) Diameter 4 Material ☑PVC ☐Carbon Steel ☐Stainless Steel

13 Screen Size (slot) Screen Slot Size 0.01

14. Date and Time of Deployment Date: 9/30/14 Time: 1035

15. Depth to Ground Water Depth to ground water at time of deployment 9.06

16. Date and Time of Retrieval Date: 12/18/14 Time: 1036

17. Depth to Ground Water Depth to ground water at time of retrieval 5.37 TOC

18. Type of Deployment Line Used Diameter: 3/16" Material: poly

19 Material and Mass (oz.) of PDBS Weight stainless steel 30.2 (stainless steel recommended)

20 Type of PDBS Used
☐Lab Filled (Modified Trip Blank must be taken at time of deployment)
☑Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)

21 Dimensions of PDBS Length (in.) 18 Diameter (in.) 1.5 Filled _____

22 Position of PDBS Weight
☑Attached to bottom of PDBS and suspended in well
☐Attached to bottom of deployment line and suspended in well
☐Attached to bottom of deployment line and resting on bottom of well (preferred)

23 Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
11.99			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
☐No, this well is being profiled during this sampling round
☑Yes, this well was profiled already. Date when well was profiled: 8/29/14

25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
☐No, flow testing has not been conducted in this well
☐Yes, flow testing of this well was conducted. Date of testing: _____
Type of flow meter used: _____
Measurements taken every _____ feet [Please Attach Results]

26. Weather Conditions During Deployment Temp. 65F Wind 0-5mph ☐Sunny ☑Overcast ☐Raining ☐Snowing

27. Weather Conditions During Retrieval Temp. 40°F Wind 10-15mph ☑Sunny ☐Overcast ☐Raining ☐Snowing

6. Well Surface Finish: ☑ Stick Up ☐ Flush Mount
7. Location of Measuring Point: ☑ Top of Casing ☐ Other (specify) _____
8. **NOTE:** PDBS represent a point sample within the screened interval or open hole of the well. It is critical to know the exact depth within the well where the PDBS is deployed. Well construction specifications, which are typically used to determine where to set the PDBS in the well, are measured in feet below ground surface (fbgs). If the depth interval for PDBS deployment is measured from the reference point identified above, the difference between this reference point and the ground surface must be measured and accounted for to determine the proper depth interval to set the PDBS. Please identify below, any differences between the measuring point identified above and actual ground surface at the well head.
   Distance between measuring point and ground surface (ft.) 1.87
9. Total Well Depth (fbgs): 23.46
10. Screened interval/open hole (fbgs): 18.46 - 23.46
11. Well Casing: Diameter 4" Material: ☑ PVC ☐ Carbon Steel ☐ Stainless Steel
12. Well Screen (or open hole diameter): Diameter 4" Material: ☑ PVC ☐ Carbon Steel ☐ Stainless Steel
13. Screen Size (slot): Screen Slot Size 0.01

14. Date and Time of Deployment: Date: 9/30/14 Time: 1020
15. Depth to Ground Water: Depth to ground water at time of deployment 9.20
16. Date and Time of Retrieval: Date: 12/18/14 Time: 1028
17. Depth to Ground Water: Depth to ground water at time of retrieval 6.25 TOC
18. Type of Deployment Line Used: Diameter: 3/16" Material: poly
19. Material and Mass (oz.) of PDBS Weight: stainless steel 20oz (stainless steel recommended)
20. Type of PDBS Used:
    ☐ Lab Filled (Modified Trip Blank must be taken at time of deployment)
    ☑ Field Filled (Modified equipment blank of fill water must be taken at time of deployment. If PDBS isn't filled at well head, blank must travel with samplers until last sampler is deployed. Blank is then taken.)
21. Dimensions of PDBS: Length (in.) 12 Diameter (in.) 1.5 Filled _____
22. Position of PDBS Weight:
    ☑ Attached to bottom of PDBS and suspended in well
    ☐ Attached to bottom of deployment line and suspended in well
    ☐ Attached to bottom of deployment line and resting on bottom of well (preferred)
23. Position of PDBS in Well Screen (ft. from measuring point to center of PDBS)

1st PDBS	2nd PDBS	3rd PDBS	4th PDBS
22.31			

5th PDBS	6th PDBS	7th PDBS	8th PDBS

24. If the saturated portion of the well screen or open hole is greater than 5 feet, has the well been vertically profiled to assess the potential for contaminant stratification?
    ☐ **No**, this well is being profiled during this sampling round
    ☑ **Yes**, this well was profiled already. Date when well was profiled: 8/29/13
25. If the saturated portion of the well screen or open hole is greater than 10 feet, has the well been flow tested to assess the potential for vertical flow to be present within the well?
    ☐ **No**, flow testing has not been conducted in this well
    ☐ **Yes**, flow testing of this well was conducted. Date of testing: _____
    Type of flow meter used: _____
    Measurements taken every _____ feet **[Please Attach Results]**
26. Weather Conditions During Deployment: Temp. 65 Wind 0-5 mph ☐ Sunny ☑ Overcast ☐ Raining ☐ Snowing
27. Weather Conditions During Retrieval: Temp. 40°F Wind 10-15 mph ☑ Sunny ☐ Overcast ☐ Raining ☐ Snowing

APPENDIX O

DATA VALIDATION MEMORANDUM

DATA VALIDATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Validation by: Sandra de las Fuentes

Date: November 17, 2014

Parsons - Austin

INTRODUCTION

The following data validation summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on September 30, October 1, 2, and 3, 2014. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1407813 and R1407825

The samples in these SDGs were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs), semivolatile organic compounds (SVOCs) plus TICs, organochlorine pesticides and metals. The field QC samples collected in R1407813 included two field duplicate (FD) samples, one matrix spike/matrix spike duplicate (MS/MSD) pair, four equipment blanks, one trip blank and one source blank sample. The field QC samples in R1407825 included two FD samples, one MS/MSD pair, one EB and one TB sample.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York. There was 1 cooler shipped for R1407813 and two coolers shipped for R1407825. The cooler for R1407813 was received at 8.7°C and the coolers in R1407825 were received at 5.1°C and 5.4°C. During login of the coolers, ALS noted ice was present in all coolers, which indicates the cooling process was ongoing; therefore sample preservation was not compromised.

All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

SAMPLE IDs AND REQUESTED PARAMETERS

Sample ID	SDG	Matrix	VOCs, plus TICs	SVOCs, plus TICs	Pesticides	TAL Metals	Arsenic, Cadmium, and Lead only	Lead Only	Comments

W = Water

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5035	8260C	µg/L	NA
Metals	W	3010A	6010C	µg/L	NA
Mercury	W	7470A	7470A	µg/L	NA
SVOCs	W	3510C	8270D	µg/L	NA
Pesticides	W	3510C	8081B	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been validated following the guidelines outlined in the project-specific UFP-QAPP. A "Level IV" validation was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; calibrations; case narratives; raw data; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for water, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOC portion consisted of twenty-six (26) water samples, including five EBs, two TBs, two FDs, one DI water and two pairs of MS/MSD samples. The samples were collected on September 30, October 1, 2, and 3, 2014 and were analyzed for the full list of VOCs as specified in the project-specific UFP-QAPP.

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

The following samples in this SDG reported TICs:

FTMM-8-GW-M8MW15-11.30
FTMM-59-GW-1122MW07-16.67
FTMM-59-GW-1122MW107-16.67
FTMM-58-GW-2567MW03-8.03

The samples for VOCs were analyzed in three batches (#415258, #415409, and #416090) under two ICALs. All analyses were performed undiluted.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS, the MS, MSD samples, and the surrogate spikes. There were two MS/MSD pairs designated on the COCs. Samples FTMM-8-GW-697MW01-16.45 (R1407803) and FTMM-3-GW-M3MW02-21 (R1407825) were designated for MS/MSD purposes.

Three LCSs were analyzed for VOCs, one for each batch. All LCS and surrogate spike recoveries were within acceptance criteria.

The MS and MSD recoveries were within acceptance criteria, except for the following:

FTMM-8-GW-697MW01-16.45

Analyte	MS %R	MSD %R	Criteria
1,2,4-Trimethylbenzene	30	31	75-130
1,3,5-Trimethylbenzene	32	34	75-130
Styrene	15	15	65-135
m,p-Xylene	67	70	75-130
o-Xylene	73	76	80-120

The non-compliant analytes were flagged “UJ” as non-detect and estimated in the parent sample due to the possible low bias demonstrated by the MS/MSD pair.

Precision

Precision was evaluated using the RPD obtained from the two pairs of MS/MSD concentrations. Precision was further evaluated by comparing the two field duplicate analyte results. FTMM-59-GW-1122MW107-16.67 was collected and analyzed as the FD for FTMM-59-GW-1122MW07-16.67 (R1407813) and FTMM-3-GW-M3MW102-21 was collected and analyzed as the FD for FTMM-3-GW-M3M02-21 (R1407825).

All MS/MSD RPDs were within acceptance criteria.

All target VOCs were non-detect above the Limit of Quantitation (LOQ) in both pairs of parent and field duplicate samples.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

Three method blanks, two trip blanks, five equipment blanks and one source water blank were analyzed for VOCs. All method blanks were less than one-half the LOQs, as required by the project-specific UFP-QAPP, so no corrective action was required. Low concentrations (< 1.0 µg/L; LOQs of 5.0 µg/L) of 1,2,4-Trichlorobenzene, bromomethane, hexachlorobutadiene, and/or naphthalene were detected in one or more MBs.

The trip blank was non-detect for all target VOCs, except as follows:

TB ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
FTMM-TB-100214	1,2,4-Trichlorobenzene	0.24 J	5.0
	Naphthalene	0.22 J	5.0

The following samples were flagged "B" for possible blank contamination as indicated in the trip blank sample:

Sample ID	Analyte	Conc. (µg/L)	Applied Flag
FTMM-8-GW-M8M15-11.30	Naphthalene	0.24 J	B
FTMM-64-GW-812MW04-5.53	Naphthalene	0.38 J	B
FTMM-59-GW-1122MW07-16.67	Naphthalene	0.80 J	B
FTMM-59-GW-1122MW107-16.67	Naphthalene	1.1 J	B

There were no 1,2,4-Trichlorobenzene detections in any of the associated samples.

The equipment blank was non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
FTMM-EB093014	Acetone	2.2	5.0

Although the above EB was shipped with samples in R1407813, the EB was collected and is associated with samples collected in SDG R1407806. All sample results for acetone with concentrations within five times the amount detected in the equipment blank were "B" flagged by the Parsons data validator. Refer to the DVR for SDG R1407806 for details.

The source blank was non-detect for all target analytes.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

SEMIVOLATILE ORGANIC COMPOUNDS

General

The SVOC portion of SDG R140785 consisted of seven (7) water samples, including one EB, one MS/MSD pair, and one FD sample. The samples were collected on October 3, 2014 and were analyzed for the full list of semivolatiles as listed in the project-specific UFP-QAPP.

The SVOC analyses were performed according to USEPA SW846 Method 8270D. The samples were prepared and analyzed following the procedures outlined in the UFP-QAPP. The samples were prepared and analyzed within the holding time required by the method.

The samples for SVOCs were analyzed in a single batch (#415497) under one ICAL. The following samples in this SDG reported TICs:

FTMM-EB-100314
FTMM-66-GW-886RW01-11.55
FTMM-66-GW-886RW08-11.22

All analyses were performed undiluted.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS, LCSD, MS, MSD samples, and the surrogate spikes. Sample FTMM-66-GW-886RW01-11.55 was designated for MS/MSD analysis on the COC.

The LCS, LCSD were analyzed for SVOCs and all spike recoveries were within acceptance criteria, except as follows:

LCS ID	Analyte	LCS %R	LCSD %R	Criteria
LCS/LCSD	Benzidine	0	0	10-130%
Batch # 415497	Di-n-butyl Phthalate	(110)	116	55-115%

Benzidine was non-detect in all associated samples and were therefore flagged “UJ” due to the non-recovery in the LCS and LCSD. The following samples were flagged “UJ” for benzidine:

FTMM-66-GW-886RW01-11.55
FTMM-66-GW-886RW06-10.12
FTMM-66-GW-886RW106-10.12

No flags were applied due to the slightly high recovery (<1%) of Di-n-butyl Phthalate in the MSD since the associated samples were non-detect and the MS recovery was within acceptance criteria.

All surrogate spike recoveries were within acceptance criteria.

All MS/MSD recoveries were within acceptance criteria, except for the following:

FTMM-66-GW-886RW01-11.55

Analyte	MS %R	MSD %R	Criteria
3,3'-Dichlorobenzidine	0	0	20-110%
Benzidine	0	0	10-130%

The parent sample results for 3,3'-Dichlorobenzidine was flagged "UJ" due to the non-recovery in the MS and MSD. Benzidine was previously flagged in the associated samples due to the non-recoveries in the LCS and LCSD. It should be noted that although Benzidine didn't recover in the LCS, LCSD, MS or MSD, the associated samples were not rejected (only estimated with a "J" flag) since other laboratory QC met criteria, including the ICALs, ICVs and CCVs.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte values. FTMM-66-GW-886RW106-10.12 was collected and analyzed as the FD for FTMM-66-GW-886RW06-10.12.

All LCS/LCSD and MS/MSD RPDs were within acceptance criteria, except the RPD calculations for 3,3'-Dichlorobenzidine and benzidine were not possible since neither the LCS/LCSD and/or MS/MSD recovered for these analytes.

All target SVOCs were non-detect in sample FTMM-66-GW-886RW06-10.12 and the associated field duplicate sample FTMM-66-GW-886RW106-10.12.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

All samples were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- All instrument performance check criteria were met.
- All CCV criteria were met.
- All internal standard criteria were met.

- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

One method blank and one equipment blank were analyzed for SVOCs. The blanks were non-detect for all target SVOCs.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All SVOC results for the sample in this SDG were considered usable. Thus, the completeness for the SVOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

ORGANOCHLORINE PESTICIDES

General

The pesticides portion of SDG R1407813 consisted of this SDG consisted of six (6) water samples, including a EB, a FD and a MS/MSD pair. The samples were collected on October 1, 2014 and were analyzed for the full list of pesticides as specified in the UFP-QAPP.

The pesticide analyses were performed according to the United States Environmental Protection Agency (USEPA) SW846 Method 8081B. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

The samples for pesticide analysis were extracted in a single batch (#415375). The samples were analyzed under a single initial calibration (ICAL). All analyses were performed undiluted.

It should be noted that Toxaphene was not included in the extracted LCS QC sample. Toxaphene is included in the ICAL and CCVs for pattern recognition. Had Toxaphene been detected in any of the field samples, the sample and QC, including toxaphene, would have been re-analyzed. Toxaphene is a multi-peak responding compound and cannot be included in the LCS spike mix without interfering with the other compounds. Spiking Toxaphene in LCS (or MS/MSDs) is not a requirement of SW846. When surrogates and other target compounds have acceptable %Rs in the LCS and when the samples are ND for Toxaphene, is it reasonable to accept all pesticide data, including Toxaphene.

Accuracy

Accuracy was evaluated using the percent recovery (%R) obtained from the LCS, LCSD and the surrogate spikes. Sample FTMM-8-GW-697MW01-16.45 was designated for MS/MSD analysis on the COC.

It should be noted that the pesticide surrogate limits reported by ALS differ from the limits provided in the UFP-QAPP. According to USEPA's Region 2 Quality Assurance

for Pesticide Data Validation (SOP No. HW-36 Revision 4), if both surrogate recoveries are greater than or equal to 30%, and less than or equal to 150%, qualification of the data is not necessary. If any surrogate recovery is greater than or equal to 10%, and less than 30%, qualify detected target compounds as biased low (J) and qualify non-detected target compounds as approximated (UJ). For any surrogate recovery less than 10%, the reviewer should examine the sample chromatogram to assess the qualitative validity of the analysis. If sample dilution is not a factor, qualify detected target compounds as biased low (J) and qualify non-detected target compounds as unusable (R).

All LCS/LCSD recoveries were within acceptance criteria, except as follows:

LCS ID	Analyte	LCS %R	LCSD %R	Criteria
LCS/LCSD Batch # 415375	Endrin Aldehyde	14	16	55-135

All associated sample results for Endrin Aldehyde were flagged "UJ" due to the low recoveries in the LCS and LCSD. The following samples were flagged "UJ" for Endrin Aldehyde:

FTMM-8-GW-697MW01-16.45
FTMM-56-GW-80MW05-7.14
FTMM-56-GW-80MW105-7.14

All MS/MSD recoveries were within acceptance criteria, except for the following:

FTMM-8-GW-697MW01-16.45

Analyte	MS %R	MSD %R	Criteria
Endrin Aldehyde	17	15	55-135

Endrin Aldehyde was previously flagged in the associated samples due to the low recoveries in the LCS and LCSD. No further action is required.

All surrogate spike recoveries were within acceptance criteria.

Precision

Precision was evaluated using the RPD obtained from the LCS/LCSD and MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte values. Sample FTMM-56-GW-80MW105-7.14 was collected and analyzed as the FD of FTMM-56-GW-80MW05-7.14.

All LCS/LCSD and MS/MSD RPDs were within acceptance criteria.

All target pesticides were non-detect in sample FTMM-56-GW-80MW05-7.14 and the associated field duplicate sample FTMM-56-GW-80MW105-7.14.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blanks for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the Work Plan. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All secondary source verification (SSV) criteria were met.
- All continuing calibration verification (CCV) criteria were met.
- All breakdown criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.

There was one method blank and one equipment blank associated with the pesticides analyses in this SDG. Both blanks were non-detect for all target pesticides.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All pesticide results for the samples in this SDG were considered usable. The completeness for the pesticide portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

METALS

General

The metals portion consisted of fourteen (14) water samples, including three EBs, one FD and two pairs of MS/MSD samples. The samples were collected on September 30, October 1, 2, and 3, 2014. Not all samples were analyzed for all metals, see Sample IDs and Requested Parameters table in the introduction section above.

The metals analyses were performed using USEPA SW846 Method 6010C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

The samples for metals analyses were digested in a single batch (#220154) and analyzed in two batches under two different ICALs. All samples were performed undiluted.

It should be noted that several metals were reported at different LOQs than as stated in the UFP-QAPP. The LOQs are routinely updated by the laboratory, and are generally

done so annually. For each metal, the revised LOQ remains lower than the NJ Groundwater Quality Limits (Specific Ground Water Quality Criteria - Class IIA and Practical Quantitation Levels), with the exception of arsenic, which is 3 µg/L. Note the original UFP-QAPP limit provided for arsenic was also above the NJ Groundwater Quality Limit.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS. Samples FTMM-8-GW-697MW01-16.45 (R1407813) and FTMM-3-GW-M3MW02-21 (R1407825) were designated on the COCs for MS/MSD analysis.

All LCSs, MSs and MSDs were within acceptance criteria.

Precision

Precision was evaluated using the RPD obtained from the LCS/LCSD and MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte values. Sample FTMM-3-GW-M3MW102-21 was collected and analyzed as the FD of FTMM-3-GW-M3MW02-21.

All LCS/LCSD and MS/MSD RPDs were within acceptance criteria.

All target metals were non-detect above the Limit of Quantitation (LOQ) in both the parent and field duplicate samples in the parent/FD pair, except as follows:

Parent: FTMM-3-GW-M3MW02-21

Analyte	Parent (µg/kg)	FD (µg/kg)	RPD	Criteria
Aluminum	685	660	3.7	RPD ≤ 40
Barium	48.6	47.7	1.9	
Calcium	4930	4620	6.5	
Potassium	3090	2990	3.3	
Magnesium	10200	9910	2.9	
Manganese	32.4	31.0	4.4	
Sodium	12300	12200	0.8	
Nickel	55.3	50.5	9.1	
Zinc	102	96.8	5.2	

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;

- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating preservation and holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. The samples were prepared and analyzed within the holding times required by the method.

- All instrument calibration criteria were met.
- All second source criteria were met. The ICV samples were prepared using a secondary source.
- All continuing calibration verification (CCV) criteria were met.
- All interference check (ICSA/ICSAB) criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.
- The dilution test (DT) was performed on sample FTMM-8-GW-697MW01-16.45 (R1407813; lead only) and FTMM-3-GW-M3MW02-21 (R1407825; all 22 metals). Only metals greater than 50 times the method detection limit (MDL) were evaluated.
- The post digestion spike (PDS) was performed on the same samples as the DT. The PDS was applicable for all metals and all metals met criteria as follows:

FTMM-8-GW-697MW01-16.45

Metal	%R	Criteria
Lead	95	75 – 125%

FTMM-3-GW-M3MW02-21

Metal	%R	Criteria
Silver	97	75 – 125%
Aluminum	93	
Arsenic	99	
Barium	100	
Beryllium	97	
Calcium	97	
Cadmium	97	
Cobalt	97	
Chromium	102	
Copper	100	
Iron	101	
Potassium	98	
Magnesium	90	

Metal	%R	Criteria
Manganese	100	
Sodium	98	
Nickel	102	
Lead	98	
Antimony	101	
Selenium	118	
Thallium	93	
Vanadium	98	
Zinc	102	

There were two method blanks, three EBs and several calibration blanks associated with the metals analyses in this SDG. All blanks were compliant, except as follows:

Both method blanks contained several metals at less than one-half the LOQs, as required by the project-specific UFP-QAPP, with the following exceptions:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
Method Blank Batch # 220154; SDG R1407825	Barium	11.09	20

All sample results for barium with concentrations within five times the amount detected in the equipment blank were "B" flagged by the Parsons data validator. The following samples were flagged "B" for possible blank contamination of Barium:

Sample ID	Metal	Conc. (µg/L)	Applied Flag
FTMM-3-GW-M3MW02-21	Barium	48.6	B
FTMM-3-GW-M3MW102-21	Barium	47.7	B

The equipment blank was non-detect for all analytes, except for the following:

Blank ID	Analyte	Conc. (µg/L)	LOQ (µg/L)
FTMM-EB0100314	Arsenic	1.5 J	10
	Magnesium	16.2 J	1000
	Manganese	0.444 J	10
	Sodium	49.3 J	1000

All associated samples reported results greater than 5 times the amount of the metal concentrations found in the EB; therefore, no corrective action was required since the impact on the sample results is considered insignificant.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All metals results for the samples in this SDG were considered usable. Therefore, the completeness for the metals portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

MERCURY

General

The mercury portion consisted of five (5) water samples, including one EB, one FD and a MS/MSD pair. The samples were collected on October 3, 2014. The samples were analyzed for mercury as specified in the project-specific UFP-QAPP.

The mercury analyses were performed using USEPA SW846 Method 7470A. All samples in this SDG were analyzed following the procedures outlined in the project-specific QAPP. All samples were prepared and analyzed within the holding time required by the method.

The samples for mercury were digested in a single batch (#220311). The samples were analyzed in a single batch under one ICAL. All analyses were performed undiluted.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCS, MS and MSD samples. Sample FTMM-3-GW-M3MW02-21 was designated on the COC for MS/MSD analysis.

The LCS, MS and MSD recoveries for mercury were within acceptance criteria.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte values. Sample FTMM-3-GW-M3MW102-21 was collected and analyzed as the FD of FTMM-3-GW-M3MW02-21.

The MS/MSD RPDs were within acceptance criteria.

Mercury was non-detect in both the parent and field duplicate samples.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating preservation and holding times; and
- Examining laboratory blanks for cross contamination of samples during analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. The samples were prepared and analyzed within the holding times required by the method.

- All instrument calibration criteria were met.
- All second source criteria were met. The ICV samples were prepared using a secondary source.
- All CCV criteria were met.
- The MDLs met the requirements listed in the DoD QSM version 4.2.
- A dilution test was not required for mercury because all sample results for mercury were non-detect.

There was a method blank, a EB and several calibration blanks associated with the metals analyses in this SDG. Mercury was non-detect in the method blank, the EB and all calibration blanks.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All mercury results for the samples in this SDG were considered usable. Therefore, the completeness for the mercury portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected. All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

DATA VERIFICATION SUMMARY REPORT

for samples collected from

FORT MONMOUTH

OCEANPORT, NEW JERSEY

Data Verification by: Sandra de las Fuentes

Date: January 27, 2015

Parsons - Austin

INTRODUCTION

The following data verification summary report covers water samples and the associated field quality control (QC) samples collected from Fort Monmouth in Oceanport, New Jersey on December 18 and 19, 2014 as part of the 4th Groundwater Quarterly Event. Samples were logged in under the following Sample Delivery Groups (SDGs):

R1410303 and R1410307

This verification report covers all of the analyses in the SDGs listed above.

The samples in this SDG were analyzed for volatile organic compounds (VOCs) plus tentatively identified compounds (TICs). The table below lists all samples associated with this SDG. The QC samples collected including a trip blank, a field duplicate sample and a matrix spike/matrix spike duplicate (MS/MSD) pair.

All samples were collected by Parsons and shipped to ALS Environmental in Rochester, New York in two coolers. All coolers were received by the laboratory at temperatures of 0.3°C and 2.4°C. The project-specific UFP-QAPP recommends cooler temperatures to be within the 2-6°C range. Although one cooler was received at less than the recommended range, there were no signs of freezing, therefore sample integrity remained intact.

The laboratory is DOD ELAP and NELAP certified. All samples were prepared and analyzed following the procedures outlined in the Department of Defense (DoD) Quality Systems Manual (QSM) version 4.2, and the procedures outlined in the Standard Subcontract and the project-specific Uniform Federal Policy for Quality Assurance Project Plan (UFP-QAPP).

QC IDENTIFICATION TABLE:

Sample ID	SDG	Matrix	VOCs, plus TICS	Comments
FTMM-53-GW-699MW01-7.5	R1410303	W	X	
FTMM-53-GW-699RW05-10	R1410303	W	X	Lab selected MS/MSD
FTMM-53-GW-699RW11-5.3	R1410303	W	X

Sample ID	SDG	Matrix	VOCs, plus TICS	Comments
FTMM-18-GW-M18MW23-9.28	R1410307	W	X	
FTMM-18-GW-M18MW23-16.22	R1410307	W	X	
FTMM-TB-121914	R1410307	W	X	Trip Blank

W = Water

* = Sample mistakenly logged in as FTMM-2-GW-M2MW22-10.67.

EXTRACTION AND ANALYTICAL METHODS:

PARAMETER	MATRIX	EXTRACTION METHOD	ANALYTICAL METHOD	UNITS	DRY WT. VS. WET WT
VOCs	W	5030	8260C	µg/L	NA

EVALUATION CRITERIA

The data submitted by the laboratory has been verified following the guidelines outlined in the project-specific UFP-QAPP. A verification was performed and the information reviewed in the data packages included sample results; field and laboratory quality control results; case narratives; cooler receipt forms; and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the UFP-QAPP were met.

This verification report discusses only the non-compliant QC issues that required qualifying the data. All other QC not detailed in this report was either compliant or did not require flagging (i.e. high biased QC associated with non-detected results).

The precision criterion for the relative percent difference (RPD) of the field duplicate samples is RPD $\leq$ 40 for water, as per the project-specific UFP-QAPP.

VOLATILE ORGANIC COMPOUNDS

General

The VOCs analyses were performed according to USEPA SW846 Method 8260C. All samples in this SDG were analyzed following the procedures outlined in the project-specific UFP-QAPP. All samples were prepared and analyzed within the holding time required by the method.

All analyses were performed undiluted, except as follows:

FTMM-53-GW-696RW05-10 at 2.5x for o-xylene only;
FTMM-22-GW-CW1MW281-33.74 at 5x for trichloroethene only.

There were TICs detected in samples:

FTMM-53-GW-699RW05-10
FTMM-53-GW-699RW11-5.3
FTMM-53-GW-699RW03-8.2
FTMM-54-GW-296MW06-5.07
FTMM-54-GW-296MW06-10.1
FTMM-2-GW-M2MW24-9.97
FTMM-2-GW-M2MW24-16.5

Accuracy

Accuracy was evaluated using the percent recovery obtained from the LCSs, MSs, MSDs and the surrogate spikes.

All LCS recoveries were within acceptance criteria, except as follows:

LCS ID	Analyte	%R	Criteria
Batch #427512	Chloromethane	134	40-125%

There were no detections of Chloromethane in the associated samples for batch # 7427512; therefore no action was required.

All MS/MSD recoveries were within acceptance criteria for sample FTMM-53-GW-699MW05-10, except for the following:

Analyte	MS %R	MSD %R	Criteria
1,2,4-Trimethylbenzene	45	41	75-130

The parent sample FTMM-53-GW-699MW05-10 was qualified with “J” flag for 1,2,4-Trimethylbenzene as required by the project-specific UFP-QAPP.

All MS/MSD recoveries were within acceptance criteria for sample FTMM-2-GW-M2MW11-31.91, except for the following:

Analyte	MS %R	MSD %R	Criteria
Chloromethane	131	(122)	40-125

( ) indicates the recovery met criteria.

Since the MS recovered high and there were no associated detections for chloromethane in the associated samples, no corrective action was deemed necessary.

All surrogate spike recoveries were within acceptance criteria for VOCs.

Precision

Precision was evaluated using the RPD obtained from the MS/MSD concentrations. Precision was further evaluated by comparing the field duplicate analyte results. Sample FTMM-53-GW-699MW106-10.2 was collected as the field duplicate of FTMM-53-GW-699MW06-10.2.

All MS/MSD RPDs were within acceptance criteria, except for bromomethane at 40% with criteria of 30% in sample FTMM-2-GW-M2MW11-31.91. No action was taken based on RPD results only, since the recoveries for both the MS and MSD were within criteria.

All target VOCs were non-detect above the Limit of Quantitation (LOQ) in both the parent and field duplicate samples in the parent/FD pair.

Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing the COC procedures to those described in the Work Plan;
- Comparing actual analytical procedures to those described in the Work Plan;
- Evaluating holding times; and
- Examining the laboratory blank for cross contamination of samples during sample analysis.

The samples in this SDG were analyzed following the COC and the analytical procedures described in the QAPP. All samples were prepared and analyzed within the holding time required by the method.

- All initial calibration criteria were met.
- All SSV criteria were met.
- GC/MS tuning criteria for BFB were within QC criteria for all batches.
- All CCV criteria were met, with the following exceptions:

Inst #, CCV Date	Analyte	%R	Criteria
MSVOA10, 12/30/14 1:08	2,2-Dichloropropane 1,1,2,2-Tetrachloroethane Bromomethane Dichlorodifluoromethane	72.5 79.5 70.0 79.3	80-120%

Inst #, CCV Date	Analyte	%R	Criteria
MSVOA10, 12/31/14 11:21	Bromomethane Dichlorodifluoromethane	61.6 74.4	80-120%

Inst #, CCV Date	Analyte	%R	Criteria
MSVOA-12, 12/30/14 12:10	Tert-butyl alcohol Chloromethane	71 128.5	80-120%

Inst #, CCV Date	Analyte	%R	Criteria
MSVOA-12, 12/31/14 12:53	2,2-Dichloropropane Tert-butyl alcohol	69.9 73.4	80-120%

The following samples required "J" flagging due to the low recoveries in the CCVs:

- All samples in SDG R1410303 were flagged "J" for Bromomethane and Dichlorodifluoromethane;
- Also in R1410303, FTMM-53-GW-699MW01-7.5, FTMM-53-GW-699RW05-10, FTMM-53-GW-699MW09-7.75, FTMM-53-GW-699MW16-7.5, FTMM-53-GW-699RW03-8.2, FTMM-53-GW-699MW04-8.0, FTMM-22-GW-CW1MW29-10.85, FTMM-22-GW-CW1MW281-33.74, FTMM-22-GW-CW1MW281-33.74, and FTMM-22-GW-CW1MW27-12.63 were flagged for 2,2-Dichloropropane and 1,1,2,2-Tetrachloroethane;
- All samples in SDG R1410307 were flagged for Tert-butyl alcohol;
- Also in R1410307, FTMM-2-GW-M2MW24-9.97, FTMM-2-GW-M2MW24-16.5, FTMM-2-GW-M2MW11-36.91, FTMM-2-GW-M2MW11-46.91, and FTMM-2-GW-M2MW11-41.91 were flagged for 2,2-Dichloropropane.

- All internal standard (IS) criteria were met.
- All manual integrations performed by the laboratory were reviewed and verified.
- The MDLs were compliant with the requirements of the DOD QSM Version 4.2.

There were four method blanks and one trip blank analyzed for VOCs. See below for details.

Method Blanks:

Four method blanks were analyzed for VOCs, two in each SDG. All method blanks had detections less than one-half the LOQs, as required by the project-specific UFP-QAPP; therefore no corrective action was required. Three of the four method blanks contained low concentrations (< 0.36 µg/L) of 1,2,4-trichlorobenzene; and two of the four method blanks contained low concentrations of hexachlorobutadiene (<0.67 µg/L), and naphthalene (<0.28 µg/L). Since all associated samples were non-detect for the analytes listed in the method blanks, no corrective action was required. At the time of sample analyses, ALS did not consider any of these analytes as common laboratory contaminants.

Trip Blank:

FTMM-TB-121914 had detections of 1,2,4-trichlorobenzene and Naphthalene at 0.29 µg/L and 0.21 µg/L, respectively. Since there were no detections of either analyte in the associated samples, no corrective action was required.

Completeness

Completeness has been evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data.

All VOC results for the samples in this SDG were considered usable. The completeness for the VOC portion of this SDG is 100%, which meets the minimum acceptance criteria of 95%.

COMPARABILITY

All data was generated using contract-specific standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

The purpose of this data validation report is to ensure the integrity and reliability of analytical laboratory data. The data quality is evaluated based on precision, accuracy, representativeness, comparability, and completeness (PARCC) characteristics of the data. The validated data indicated that the laboratory correctly performed the analyses. Based on the data quality assessment, none of the data were qualified as rejected.
All data in this SDG are considered usable for the purposes of this project. All sample LODs and LOQs met the requirements listed in the project QAPP. All Method Quality Objectives have been met.

APPENDIX P

LABORATORY ANALYTICAL RESULTS

October 24, 2014 Service Request No: R1407813

Tammy Chang

8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM 4QGW/748810-03000

Dear Tammy:

Enclosed are the results of the sample(s) submitted to our laboratory on October 3, 2014. For your reference, these analyses have been assigned our service request number **R1407813**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

CASE NARRATIVE

Client:	Parsons Engineering Science	**Service Request No.:**	R1307813
Project:	FTMM 4QGW	**Project No.:**	748810-0300
Sample Matrix:	Water	**Date Received:**	10/03/14

General Comments

The DOD QSM 4.1 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.1.

Sample Receipt

Samples were collected on 09/30/14-10/02/14 and received in good condition at a cooler temperature of and 8.8°C as noted on the cooler receipt and preservation check form. The client was notified of the out of temperature cooler and the samples analyzed. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the batching form for a cross-reference between Client ID and ALS Job #.

Volatile Organics

Sixteen water samples were analyzed for TCL Volatile organics by SW-846 method 8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-8-GW-697MW01-16.45. All outlying QC has been flagged with an "*".

The Method Blanks associated with these samples were free of contamination except for "J" flagged values for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Naphthalene and Bromomethane. No data was affected.

R1307813
Page 2

Pesticide Analysis

Four water samples were analyzed for TCL Pesticides by SW-846 method 8081B. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples except DCB for sample FTMM-2-GW-M2MW24. The recovery was flagged with an "*".

The Blank Spike/Blank Spike Duplicate (LCS/LCSD) recoveries were all acceptable except Endrin aldehyde and has been flagged with an "*". All samples are possibly biased low for this compound.

The Matrix Spike/Matrix Spike Duplicate was performed on FTMM-8-GW-697MW01-16.45. All outlying QC has been flagged with an "*". The recovery for 4,4'-DDD could not be accurately determined as the amount present in the sample was greater than four times the amount added as spike as noted by the "#".

The Method Blanks associated with these samples were free of contamination.

Metals Analysis

Six water samples were analyzed for a site specific list of metals by method 6010C from SW-846. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All blank spike recoveries (LCS) were within QC limits of 80 – 120 %.

A Matrix Spike and Duplicate were done on sample FTMM-8-GW-697-MW01-16.45. All recoveries were within QC limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Folder Comments: DoD reporting

ALS Environmental

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

ACCREDITED IN ACCORDANCE WITH nelac

Rochester Lab ID # for State Certifications[1]

NELAP Accredited	Maine ID #NY0032	New Hampshire ID # 294100 A/B

Dibromochloromethane	21.4	20.0	107	60 - 135
Dichlorodifluoromethane (CFC 12)	21.0	20.0	105	30 - 155
Methylene Chloride	21.8	20.0	109	55 - 140
Ethylbenzene	20.0	20.0	100	75 - 125
Hexachlorobutadiene	20.8	20.0	104	50 - 140
Isopropylbenzene (Cumene)	22.0	20.0	110	75 - 125
Methyl tert-Butyl Ether	22.8	20.0	114	65 - 125
Naphthalene	23.7	20.0	119	55 - 140
Styrene	22.1	20.0	111	65 - 135
Tetrachloroethene (PCE)	20.3	20.0	101	45 - 150
Toluene	21.8	20.0	109	75 - 120
Trichloroethene (TCE)	21.0	20.0	105	70 - 125
Trichlorofluoromethane (CFC 11)	19.5	20.0	98	60 - 145
Vinyl Chloride	21.4	20.0	107	50 - 145
cis-1,2-Dichloroethene	21.4	20.0	107	70 - 125
cis-1,3-Dichloropropene	21.7	20.0	109	70 - 130
m,p-Xylenes	43.7	40.0	109	75 - 130
n-Butylbenzene	22.2	20.0	111	70 - 135
n-Propylbenzene	22.0	20.0	110	70 - 130
o-Xylene	22.1	20.0	110	80 - 120
sec-Butylbenzene	22.2	20.0	111	70 - 125
tert-Butylbenzene	22.1	20.0	110	70 - 130
trans-1,2-Dichloroethene	22.2	20.0	111	60 - 140
trans-1,3-Dichloropropene	22.2	20.0	111	55 - 140

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

October 24, 2014 Service Request No: R1407813

Tammy Chang
Parsons, Inc.
8000 Centre Park Drive, Suite 200
Austin, TX 78754

Laboratory Results for: FTMM 4QGW/748810-03000

Dear Tammy:

Enclosed are the results of the sample(s) submitted to our laboratory on October 3, 2014. For your reference, these analyses have been assigned our service request number **R1407813**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

ALS Group USA Corp. dba ALS Environmental

Janice Jaeger
Client Services Manager

CASE NARRATIVE

Client:	Parsons Engineering Science	**Service Request No.:**	R1307813
Project:	FTMM 4QGW	**Project No.:**	748810-0300
Sample Matrix:	Water	**Date Received:**	10/03/14

General Comments

The DOD QSM 4.1 requires detections reported to the Method Detection Limit (MDL). Values greater than the MDL and less than the Limit of Quantitation (LOQ) were flagged as estimates (J). Values less than the MDL and Limit of Detection (LOD) were reported as non-detect (ND). The LOD for each analyte is verified quarterly by the laboratory using procedures defined in DOD Quality Systems Manual Version 4.1.

Sample Receipt

Samples were collected on 09/30/14-10/02/14 and received in good condition at a cooler temperature of and 8.8°C as noted on the cooler receipt and preservation check form. The client was notified of the out of temperature cooler and the samples analyzed. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the batching form for a cross-reference between Client ID and ALS Job #.

Volatile Organics

Sixteen water samples were analyzed for TCL Volatile organics by SW-846 method 8260C. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

Library Searches against the NBS/EPA library were conducted on all samples. The 20 largest peaks, within 10 % of the nearest Internal Standard, were searched. A summary of detected peaks is included following the Target data. Any analytes detected are quantitated based on the closest internal standard and are reported flagged with a "J" as estimated. The flag "N" on a TIC compound indicates presumptive evidence of a particular compound.

All Tuning criteria for BFB were and within QC limits.

Internal Standard Areas were within QC limits.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples.

The Blank Spike (LCS) recoveries were all acceptable.

A Matrix Spike/Matrix spike duplicate (MS/MSD) was done on sample FTMM-8-GW-697MW01-16.45. All outlying QC has been flagged with an "*".

The Method Blanks associated with these samples were free of contamination except for "J" flagged values for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, Naphthalene and Bromomethane. No data was affected.

R1307813
Page 2

Pesticide Analysis

Four water samples were analyzed for TCL Pesticides by SW-846 method 8081B. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All the initial and continuing calibration criteria were met for all analytes.

All surrogate standard recoveries were within acceptance limits for all samples except DCB for sample FTMM-2-GW-M2MW24. The recovery was flagged with an "*".

The Blank Spike/Blank Spike Duplicate (LCS/LCSD) recoveries were all acceptable except Endrin aldehyde and has been flagged with an "*". All samples are possibly biased low for this compound.

The Matrix Spike/Matrix Spike Duplicate was performed on FTMM-8-GW-697MW01-16.45. All outlying QC has been flagged with an "*". The recovery for 4,4'-DDD could not be accurately determined as the amount present in the sample was greater than four times the amount added as spike as noted by the "#".

The Method Blanks associated with these samples were free of contamination.

Metals Analysis

Six water samples were analyzed for a site specific list of metals by method 6010C from SW-846. Any value detected between the LOQ and MDL was flagged with a "J" as estimated.

All blank spike recoveries (LCS) were within QC limits of 80 – 120 %.

A Matrix Spike and Duplicate were done on sample FTMM-8-GW-697-MW01-16.45. All recoveries were within QC limits.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Folder Comments: DoD reporting

ALS Environmental

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.
